Central Tel: +44 (0)1302 341659 Southern Tel: +44 (0)203 174 0658

Improper use of this machine can lead to serious injury.

The operators and maintenance personnel must carefully read this manual and sufficiently understand its contents before operation / inspecting / maintaining the machine.

Keep this manual at hand to read it over anytime.

Section 1 INTRODUCTION

INTRODUCTION

This manual is intended as a guide for the safe and effective use of this machine. This manual describes the procedures for proper operation and maintenance of the machine.

This manual is available in other languages. If a different language manual is necessary, contact your local Maeda distributor for availability. Save this manual in a designated safe place for future reference. Should this manual be lost or damaged, contact Maeda or a Maeda sales service agency immediately to order a new manual. This manual should remain with this machine upon transfer of the machine to a new owner.

This manual contains information that was available at the time of print.

The contents of this manual, including maintenance specifications, tightening torques, pressure, measuring methods, adjustment values and illustrations, are subject to change upon refinement of the machine, without notice.

Machine maintenance procedures may be updated by Maeda at any time. Always obtain the latest information from Maeda or a Maeda sales service agency before performing maintenance on this machine.

Installation and operation of this machine must comply with all laws and regulations where operated. Only personnel who have obtained a licence stipulated by the laws and regulations from the place of use are qualified to operate this machine, establish the power connection of the power supply equipment, and inspect and repair the electric system.

Numbers shown in circles in the diagrams are indicated in parentheses within the text. (Example: \bigcirc \rightarrow (1))

Disclaimers:

All information, illustrations and specifications in this manual are based on the latest information available at the time of publishing. The illustrations used in this manual are intended as representative reference views only. Moreover, because of our continuous product improvement policy, we may modify information, illustrations and/or specifications to explain and/or exemplify a product, service or maintenance improvement. We reserve the right to make any change at any time without notice.

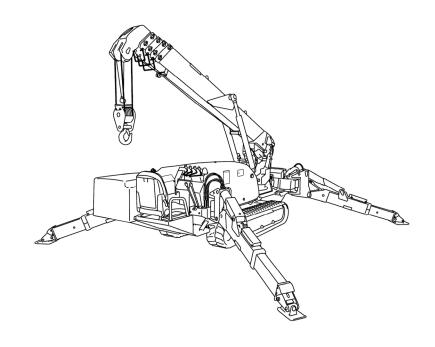

Maeda is a registered trademark of Maeda Seisakusho Co., Ltd. in Japan, the United States and/or other countries.

All Rights Reserved:

No part of this publication may be reproduced or used in any form by any means - graphic, electronic or mechanical, including photocopying, recording, taping, or information storage and retrieval systems - without the written permission of Maeda Seisakusho Co., Ltd.

Section 2 SAFETY

SAFETY DEFINITIONS

Maeda is concerned for your safety and the condition of your mini-crawler crane. Safety statements are one of the primary ways to call your attention to the potential hazards associated with Maeda mini-crawler cranes. Follow the precautions listed throughout the manual before operation, during operation and during periodic maintenance procedures for your safety, the safety of others and to protect the performance of your mini-crawler crane. Keep the labels from becoming dirty or torn and replace them if they are lost or damaged. Also, if a part needs to be replaced that has a label attached to it, make sure to order the new part and label at the same time.

This safety alert symbol appears with most safety statements. It means attention, become alert, your safety is involved! Please read and abide by the message that follows the safety alert symbol.

A DANGER

Indicates a hazardous situation which, if not avoided, will result in death or serious injury.

WARNING

Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

A CAUTION

Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

NOTICE

Indicates a situation which can cause damage to the mini-crawler crane, personal property and/or the environment, or cause the equipment to operate improperly.

SAFETY PRECAUTIONS

There is no substitute for common sense and careful practices. Improper practices or carelessness can cause burns, cuts, mutilation, asphyxiation, other bodily injury or death. This information contains general safety precautions and guidelines that must be followed to reduce risk to personal safety. Special safety precautions are listed in specific procedures. Read and understand all of the safety precautions before operating or performing repairs or maintenance. This safety section cannot cover every situation that may occur that is incidental to the use of the machine. Use common sense if you encounter a situation that is not covered to help avoid a hazardous situation.

A CAUTION

The safety messages that follow have CAUTION level hazards.

Pre-Operation Hazard

- Never permit anyone to install or operate the machine without proper training.
- Read and understand this Operation Manual before operating or servicing the crane to ensure that safe operating practices and maintenance procedures are followed.
- Safety signs and labels are additional reminders for safe operating and maintenance techniques.
- Contact Maeda or a Maeda sales service agency for additional training.
- Make sure you are aware of licences, laws and regulations that may be required or in effect where the machine is operated.

2-2 12/2022 MC305CB-3

A DANGER

The safety messages that follow have DANGER level hazards.

Electrocution Hazard

Contact with, or proximity to, an electrically charged power line will result in death or serious injury:

- This unit will not provide protection from contact with, or proximity to, an electrically charged power line when the components at the boom tip are in contact with, or in proximity to, another power line, ground or pole.
- All metal and fiberglass components at the boom tip may become energised.
- Operators must follow safe electrical work practices in accordance with their employers' work rules and applicable government regulations including:
 - Maintain minimum approach distances from electrical power lines.
 - Allow for boom, electric line and load sway.
- If any part of the unit is elevated within the minimum approach distance of an energised conductor, all unauthorised personnel must KEEP CLEAR.
- There is a risk of electric shock if the battery unit is handled incorrectly.

WARNING

The safety messages that follow have WARNING level hazards.

Tip / Boom Failure Hazard

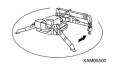

Overloading the crane may cause it to tip over or the boom to fail:

- Before you try to hoist a load, it is essential that you know:
 - Boom angle (use boom angle indicator)
 - Working radius (use operating range chart)
 - Boom length (use rated total load chart)
 - Rated total load (use rated total load chart)

- Never try to hoist a load that exceeds the rated total load. Rated total load is the mass of the load plus weight of the winch lines and the weight of the hook block.
- Always calculate the total load using the rated total load chart before you attempt to hoist the load. Never rely on the moment limiter as the primary means to determine whether a load is safe to lift.
- All the values provided on the rated total load chart assume that the machine is located on a level and firm surface. Always use outrigger pads when you deploy the outriggers on soft or unpaved surfaces.
- The values shown in the operating range chart do not account for boom deflection when the load is raised. Boom deflection will widen the working radius. Use the next largest radius on the operating range chart to account for this.
- Always extend outriggers before lifting load. If
 the terrain is not completely level and you must
 adjust the outrigger position to compensate,
 you must derate the rated total load by the
 amount stated in the "Crane Operation with
 Minimum/Medium Outrigger Extension" section
 of the "RATED TOTAL LOAD CHARTS" on
 page 3-12. All outrigger monitor lights, other
 than the boom stowing lamp, must be on.
- Always look at the level gauge when setting the outriggers. Look at the level gauge when making adjustments during operation. Always keep the machine body level when operating.
- Sudden or jerky movement of the travel, crane or outrigger controls can cause the machine to tip over. Always operate these controls smoothly.

The safety messages that follow have WARNING level hazards.

Crush Hazard

- Keep bystanders away from work area before and during operation.
- Keep all bystanders away from the area where outriggers are being deployed or adjusted.
- Keep all body parts clear of machine components during operation, especially between the boom/post and the boom cylinder, the winch drum and the winch line, the sheaves and the winch line, and between the tracks and the ground.
- Never commence work unless you have clear view of the jobsite or you have a helper to guide you.
- Always lower the load fully to the ground before you leave the operator's position.

Rigging Hazard

- Pay attention to the distance between the hook block and the boom when you raise the hook block or when you extend the boom (as the boom extends, the hook block automatically raises). If the hook block strikes the boom, it could cause the load to fall.
- · Never overload the winch line.
- When you are lowering the hook block, make sure there are more than three turns of winch line left on the winch drum when the hook block reaches the final working height.
- Before you hoist the load, make sure the hook block is securely attached to the winch line.
- Make sure the winch line is perpendicular to the ground as you hoist a load to avoid tipping the machine over.
- When you are hoisting a load off the ground, stop hoisting the load momentarily as the load clears the ground to make sure the load is stable.
- Never hoist more than one load at a time.

 When you hoist a long load, such as pipes, clamp the load vertically or secure it at both ends.

Slewing Hazard

- · Never slew a load over anyone.
- Always slew the load as smoothly and slowly as possible. Any sudden movement could cause the load to sway and the machine to tip over.
- Keep away from other cranes working in the area to avoid accidental contact.
- Never slew the load over the operator.
- If you need to slew the boom counterclockwise (left), make sure it is raised sufficiently to clear the operator's seat and operator.

Wind Speed Hazard

- If the maximum instantaneous wind speed is 19 to 24 mph (8.5 to 10.7 m/s) or greater, abort the job you are performing and immediately lower the load and secure the boom. This wind speed is called a "fresh wind" on the Beaufort Scale. At that speed, small trees in leaf sway slightly and wavelets form on ponds and lakes.
- Even if the maximum instantaneous wind speed is below 19 to 24 mph (8.5 to 10.7 m/s), be aware that loads with more mass, loads that are hoisted high off the ground and booms that are extended all magnify the effect of the wind on the machine. Stay aware of changing weather conditions.
- If a load is hoisted that has a large surface area, such as a metal plate, the wind can cause the load to sway and subsequently cause the machine to tip over.

High Hydraulic Oil temperature

If the hydraulic oil temperature exceeds 90°C, the electric motor will stop.

If it exceeds 90°C, hydraulic hoses and seals can be damaged and leak. The leaking hydraulic oil can cause burns.

Continuous hook raising and lowering at high speeds and high lifting heights can cause the hydraulic oil to heat up faster.

If hydraulic oil temperature exceeds 90°C stop crane operation and allow the hydraulic oil to cool.

2-4

The safety messages that follow have WARNING level hazards.

Communications Hazard

- Always work with a partner that is on the ground.
 The partner must keep aware of any hazards in the work area and communicate them to the machine operator.
- Both the machine operator and the partner must decide before work begins on the hand signals that they will use during the job.
- If hand signals are not used, proper radio communications must be set up and tested before the job begins.

Fall Hazard

- · Never carry riders on the machine.
- Always use the hand grabs and slip-resistant surfaces when entering or exiting the machine.
- Always maintain three-point contact when entering or exiting the machine.
- · Never jump off the machine.

Modification Hazard

Never modify the machine without written consent of the manufacturer. Any modification can affect the safe operation of the machine.

Exposure Hazard

Always wear personal protective equipment, including appropriate clothing, gloves, work shoes, and eye and hearing protection, as required by the task at hand.

Explosion Hazard

- While the battery is charging, hydrogen gas is being produced and can be easily ignited. Keep the area around the battery well-ventilated and keep sparks, open flame and any other form of ignition out of the area.
- Always disconnect the negative (-) battery cable before servicing the equipment.

Fire Hazard

- Have appropriate safety equipment available. Have all fire extinguishers checked periodically for proper operation and/or readiness.
- Always read and follow safety-related precautions found on containers of hazardous substances like parts cleaners, primers, sealants and sealant removers.
- Undersized wiring systems can cause an electrical fire.

The safety messages that follow have WARNING level hazards.

Asbestos Dust Hazard

- Inhalation of air containing asbestos dust may result in lung cancer.
- Make sure you use the appropriate personal protection equipment if you suspect that the worksite may contain asbestos.
- Properly prepare the worksite to prevent asbestos dust from being released into the surrounding environment.

Entanglement / Sever Hazard

 Verify there are no people, obstacles or other equipment near the machine before starting the machine. Sound the horn as a warning before starting the machine.

- Always stop the machine before beginning service.
- If the machine must be serviced while it is operating, remove all jewelry, tie back long hair and keep hands, other body parts and clothing away from moving/rotating parts.
- Verify that all machine guards and covers are attached properly to the machine before starting the machine. Do not start the machine if any guards or covers are not properly installed on the machine.

- Always turn the starter switch to the "OFF" position after operation is complete and remove the key from the switch. Keep the key in your possession when the machine is not operating.
- Attach a "Do Not Operate" tag near the Key Switch while performing maintenance on the equipment.
- Never operate the machine while wearing a headset to listen to music or radio because it will be difficult to hear the warning signals.
- Always start the machine or operate the controls while you are seated in the operator's seat.

Alcohol and Drug Hazard

Never operate the machine while under the influence of alcohol or drugs, or when ill.

Piercing Hazard

- Avoid skin contact with highpressure hydraulic fluid caused by a hydraulic system leak such as a broken hydraulic hose. Highpressure hydraulic fluid can penetrate your skin and result in serious injury. If you are exposed to high-pressure hydraulic fluid, obtain prompt medical treatment.
- Never check for a hydraulic fluid leak with your hands. Always use a piece of wood or cardboard. Have your authorised Maeda dealer or distributor repair the damage.

Flying Object Hazard

Always wear eye protection when cleaning the machine with compressed air. Dust, flying debris, compressed air, pressurised water or steam may injure your eyes.

2-6 12/2022 MC305CB-3

The safety messages that follow have WARNING level hazards.

Burn Hazard

 Items such as the motor, motor controller, and oil will be hot immediately after shutting down the machine.

There is a risk of burn injuries if maintenance is carried out in this state.

- Keep hands and other body parts away from hot surfaces.
- Handle hot components with heat-resistant gloves.

Working Under Machine Hazard

- Park the machine on a flat, firm and level surface.
- Fully retract and lower the boom.
- Extend all outriggers to the maximum position so the tracks clear the ground.
- Place jack stands of sufficient strength in strategic locations under the machine to help support it during maintenance.

Working Above Machine Hazard

- Always maintain three-point contact as you climb on or off an elevated work surface.
- Do not jump from the elevated work surface.
- Do not climb on the boom, outrigger or other machine surface.
- Where necessary, wear protective equipment and a safety harness.

A CAUTION

The safety messages that follow have CAUTION level hazards.

Poor Lighting Hazard

Ensure that the work area is adequately illuminated. Always install wire cages on portable safety lights.

Tool Hazard

Always use tools appropriate for the task at hand and use the correct size tool for loosening or tightening machine parts.

Slip Hazard

- Immediately clean up any spilled liquid on the shop floor.
- Clean up accumulated dirt and debris on the shop floor at the end of each shift.

Communications Hazard

- Follow the policies and instructions established by your employer and authorities having jurisdiction. The policies have been developed to protect you and your co-workers from needless personal injury.
- Post signs to alert people that are not authorised to be in the shop that they must stay out of the work area.
- If you must run the machine during maintenance procedures, make sure you have a helper to keep bystanders clear of the machine and make observations of moving parts as requested by the operator.

NOTICE

The safety messages that follow have NOTICE level hazards.

Any part which is found defective as a result of inspection or any part whose measured value does not satisfy the standard or limit must be replaced.

Always tighten components to the specified torque. Loose parts can cause equipment damage or cause it to operate improperly.

Only use replacement parts specified. Other replacement parts may affect warranty coverage.

Follow the guidelines of the governmental agencies for the proper disposal of hazardous materials such as oil. Consult the local authorities or reclamation facility.

Clean all accumulated dirt and debris away from the body of the machine and its components before you inspect the machine or perform preventive maintenance procedures or repairs. Operating a machine with accumulated dirt and debris will cause premature wear of machine components. Accumulated dirt and debris also hinders effective machine inspection.

Retrieve any tools or parts that may have dropped inside of the machine to avoid improper machine operation.

Never dispose of hazardous materials by dumping them into a sewer, on the ground, or into groundwater or waterways. If any alert indicator illuminates during machine operation, stop the machine immediately.

Determine the cause and repair the problem before continuing to operate the machine. Check the following specifications and items before using this machine:

- Maintenance inspection records for completion of periodic inspections and service
- Crane capacity
- · Crane maintenance condition
- Problems or failures unique to the crane
- Operating condition of the brakes, clutch and other operating controls
- Condition and operation of lighting, including rotating lights
- Condition and operation of hook, winches, boom, outriggers and related components
- Moment limiter
 A safety device that uses sensors to detect the machine status and prevent overload.
- Instrument panel
 Houses the operation switches and a monitor.
- Outrigger operation panel
 Used to select the machine operation mode
 ("Travel", "Outrigger", and "Crane") and to
 operate the outriggers.

[46] 349-4427000 (4 places)

TIPPING THE MACHINE

- If a load exceeds the rated level, the machine possibly cause great danger to yourself and damage to the machine.

 Operate the lever slowly to smoothly start and stop abruptly operate the lever because it may cause the load to swing or unbalance the crane body, possibly resulting in its overturning, abrupt lever operation will also adversely affect the crane. Be
- sure to swivel at low speed.

 Structurally, outriggers are unable to extend beyond their extension limit. Therefore, before extending outriggers, choose a proper place for optimum extension.
- Check that each pin has been fully inserted. Be sure to lock the snap pins onto the position pins.

✓ GENERAL RULE TO OBSERVE

- 1. The working radius shown is based on the actual value including boom deflection.
- Always work in accordance with these values.

 2. The working range chart does not take boom deflection under load into account.

 3. The rated total load includes the weight of Searcher Hook. (25kg)

 4. Rough operation of crane is setemely dangerous, stick to safe operation.

 5. Stationary load only.

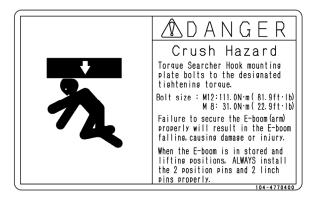

- 6. When using searcher hook, moment limiter must be set to 1.5t searcher hook mode.
- and select searcher hook offset position. 7. Before start working always make sure moment limiter is correctly set to the actual working
- condition.
- 8.Do not use searcher hook and main hoist hook block/ball simultaneously to hoist load. 9.The rated total load shown on the chart does not include weight of main crane hook block.

Section 3 SPECIFICATIONS, TERMINOLOGY AND CAPACITY CHARTS

MACHINE FEATURES

This machine is only to be used for crane operation.

This machine is a mobile crane with a rubber track battery-powered travelling dolly (carrier) equipped with a boom crane.

This self-propelled crane is capable of moving (travelling) on a worksite and craning an object weighing within the rated total load capacity. This crane can be operated from the operation seat or with a remote control system.

Main Features

Viewed from the operation seat, the front, back, left, and right of the machine are determined in this manual, viewing in the travelling direction (front) of the machine.

Boom slewing motion is determined with the machine viewed from immediately above; slew clockwise (right) denotes right-handed motion and slew counterclockwise (left) denotes left-handed motion.

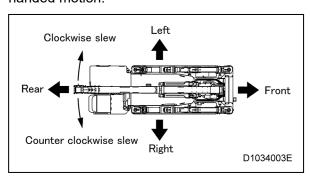

Fig. 3-1

This machine is composed of the units listed below.

Travelling Dolly

This is a compact machine designed to keep the overall width between the crane and outrigger minimised with them housed (in travelling position).

This compact design is ideal for work in confined areas.

Two-travelling lever operation enables not only direction changes among forward, backward, and right/left but pivot turn and spin turn.

A battery is provided to allow operation without exhaust gas emissions.

Crane

An automatic slide outrigger is embedded in the crane to permit outrigger grounding from the operation seat.

Through the combined use of telescoping, boom lift, and slewing besides winch system operation, the crane is capable of raising or lowering the hook block and moving an object weighing within the rated total load to a designated position within the confines of the working envelope. Radio- and remote-control system allow remote outrigger setting and remote crane operation.

Safety Devices

This is composed of the following parts and devices:

- · Over winding detector
- · Rope over unwinding detector
- Automatic stop device (moment limiter)
- · Angle indicator
- · Hydraulic safety valve
- · Hydraulic automatic locking device
- Latch
- Alarm buzzer
- Audio alarm
- · Level gauge
- Crane tip-over alarm (an alarm issued in the event of the crane operation at 3-degree inclination and travelling at 15-degree inclination)
- Travelling lever lock
- Travelling/crane/outrigger selector switch (designed to prevent the machine from craning at travelling)
- Outrigger safety device (outrigger interlock and crane interlock)
- Working envelope limited
- · Working status lamp
- Outrigger un-set warning lamp

3-2 12/2022 MC305CB-3

CRANE TERMINOLOGY

Terms and Definitions

Rated Total Load

The maximum load that can be applied according to the boom length and angle. The load includes the mass (weight) of hoisting accessories (hooks) and slinging ropes. For additional information, see "RATED TOTAL LOAD CHARTS" on page 3-12.

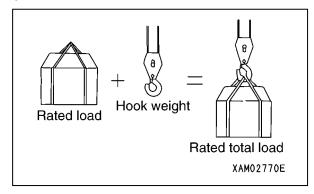

Fig. 3-2

Rated Load

A load derived by subtracting the mass (weight) of hoisting accessories (hooks) and slinging ropes from the rated total load.

Working Radius

A horizontal distance between the axis of slewing and the hook centre.

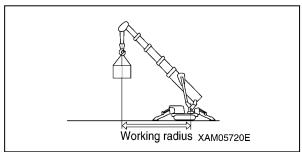

Fig. 3-3

Boom Length

A distance between the boom primary pin and the sheave pin of the end boom.

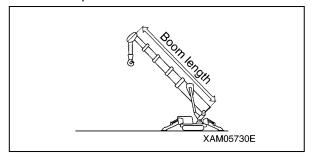

Fig. 3-4

Boom Angle

An angle which the boom forms with the horizon.

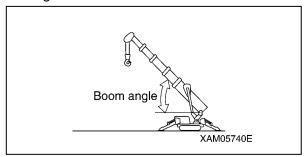

Fig. 3-5

Lifting Height above Ground

This is a vertical distance between the hook bottom and the ground with the hook raised to the upper limit.

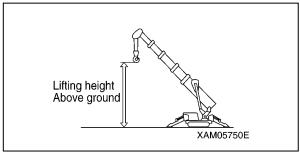

Fig. 3-6

PRINCIPLE SPECIFICATIONS LIST

Machine Specifications

	System / Item	MC305CB-3
	Machine mass	3925 kg
	Overall length x width x height	4195mm x 1280mm x 1695mm
Mass and dimensions	Distance between idler and sprocket	1750mm
difficitisions	Track gauge	980mm
	Track width	300mm
	Max. rated total load x working radius	2.98t x 2.5m
	Max. working radius	12.16m x 0.26t
Capacity	Max. lifting height (on the ground)	12.52m
	Max. lifting height (underground)	-16.09m (4 falls)
	Method	Swash plate axial piston motor, planetary gear deceleration, friction plate brake
Winch system	Winding speed (4 layers, 4 falls)	9.2 m/min
	Hoisting cable	IWRC 6 x WS (26) 8mm x 73m
	Method	Sequentially telescoping hydraulic cylinder (3 pieces) + Sheave-embedded wire cable expansion device (1 piece), (With a hydraulic automatic locking device)
Boom telescoping system	Boom type	Pentagonal section, hydraulic automatic extension, 5-stage boom (Stage 2/3: Sequentially telescoping, Stage 4/5: Simultaneous telescoping)
	Boom length	3.695m - 5.945m - 8.145m - 10.315m - 12.485m
	Boom telescoping stroke/time	8.79m/39.6sec
Derrick system	Method	Direct push-type hydraulic double-acting cylinder (2 pieces), (With a hydraulic automatic locking device)
	Boom angle/ time	0 to 80 deg./19.9sec
Slewing system	Method	Slew bearing, hydraulic motor drive, Reduction gear: Worm + Reduction spur gear, Brake: Worm-selflock
	Slewing angle/ speed	360 deg. (continuous)/36.7sec (1.6min ⁻¹)
	Method	Extension/ground: Direct push-type hydraulic cylinder (With a hydraulic automatic locking device)
Outrigger system	Overall width of extended outriggers	External dimensions: (Front) 4,808 mm x (Lateral) 5,170 mm x (Rear) 4,704 mm Centre: (Lateral) 5171mm x (Front) 4809mm x (Rear) 4706mm
	Method	Hydraulic two-speed motor drive, Variable speed, Built-in brake
Travelling system	Travel speed	Forward/backward: 0 – 1.4km/h
Travelling System	Gradeability	23 deg.
	Ground pressure	36.5kPa {0.37kgf/cm²}
	Hydraulic pump	Variable piston pump (6cc/rev x 2)
Hydraulic system	Rated pressure	Travelling: 20.6MPa {210kgf/cm²} Crane high-pressure relief: 20.1MPa {205kgf/cm²} Crane low-pressure relief: 4.41 to 6.37MPa {45 to 65kgf/cm²}
	Hydraulic oil tank capacity	56L
	Туре	Lithium ion
	Capacity	DC 55 V – 180 Ah
	Input voltage/current	Single-phase 100 V/15 A, 200 V/16 A
Battery	Charging time	100 V AC: 8 hrs 20 mins to 80%, 10 hrs 30 mins to 100% 200 V AC: 3 hrs to 80%, 4 hrs 30 mins to 100%
	Operating time (with full charge)	Continuous high-speed travel: 2 hrs 50 mins
	Weight	123.2 kg (15.4 kg × 8)
	Operating elevation	Up to 2,000 m
Electric motor	Output	7.5 kW AC 30 V/2500 min ⁻¹

3-4 12/2022 MC305CB-3

	System / Item	MC305CB-3
Safety device	indicator, hydraulic safety valve, hydra buzzer, audio alarm, level, crane tip-or degree inclination and travelling at 15- selector switch (designed to prevent the	device, three-winding stop alarm / automatic stop device, angle culic automatic locking device, slinging rope detachment protector, alarm ver alarm (an alarm issued in the event of the crane operation at 3-degree inclination), travelling lever lock, travelling/crane/outrigger ne machine from craning at travelling), outrigger safety device (outrigger timiter (working envelope limited), working status lamp, outrigger un-set
Classification	Mobile crane ISO4301/2 Group A1	

Remote Control System Specifications

RATED TOTAL LOAD CHARTS

CAUTION:

- All the values provided in the rated total load chart are based on the assumption that the machine is placed on a level and firm surface.
 - The machine may topple over if proper outrigger setting or ground condition fails to be assured. Exercise due caution when performing crane operation.
- The values in the rated total load chart are determined based on the working radius allowing for deflection that is developed when load is applied to the boom.
- When extending boom (3) even if only slightly, crane operation should proceed to the extent of performance of "Boom (1) + (2) + (3)".
- When extending boom (4) even if only slightly, crane operation should proceed to the extent of performance of "Boom (1) + (2) + (3) + (4)".
- When half of the " mark" passes boom (3), crane operation should proceed to the extent of performance of "Boom (1) + (2) + (3) + (4) + (5)".
- If the working radius exceeds that stated in the table even if only slightly, crane operation should proceed with respect to the rated total load corresponding to the working radius in the following table.
- The rated total load is a load including the mass of a hoisting accessory [hook: 30kg].
- Operate using the value on the load chart corresponding to the "MAX", "MID" or "MIN" outrigger extension.
- The rated lifting capacities with bold numbers are based on crane strength and others, on its stabilities (not exceeded 85% of tipping).

Programmable Moment Limiter

WARNING! Tip Hazard. The following precautions should always be observed when reading the "rated total load" provided by the programmable moment limiter.

- The outriggers should be placed on a level and firm surface.
- The outriggers should be at maximum extension as much as possible.
- The weight of an object, including that of a hoisting accessory and slinging rope, must remain below the rated total load for hoisting objects. With the boom length (number of stages) and angle specified, make a comparison between the rated total load provided by the programmable moment limiter and the weight of the object.

The programmable moment limiter provides readouts on the rated total load under the following conditions:

- The outriggers are placed on a level and firm surface.
- No deflection is developed in the boom.

Reading the Angle Indicator

The intersection point of the pointer that is attached to the, and the label on the boom, is the current boom angle. The boom angle shown in the figure below is 35° .

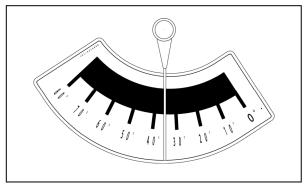

Fig. 3-11

3-12 12/2022 MC305CB-3

Boom Length

The following figures illustrate the condition of the booms, "Boom (1)", "Boom (1) + (2)", "Boom (1) + (2) + (3)", "Boom (1) + (2) + (3) + (4) + (5)" in the preceding boxes in the rated total load chart.

1. "Boom (1)": All the booms are retracted.

Fig. 3-12

2. "Boom (1) + (2)": With booms (3), (4), and (5) retracted, boom (2) is fully extended.

"Boom (1) + (2)" is to apply to crane operation with boom (2) extended even if only slightly.

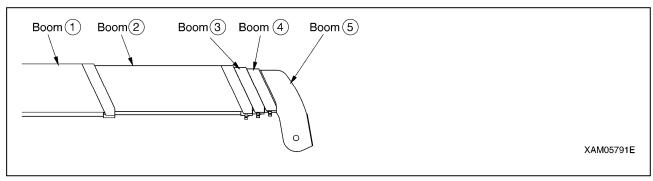

Fig. 3-13

3. "Boom (1) + (2) + (3)": With booms (4) and (5) retracted, booms (2) and (3) are fully extended.

"Boom (1) + (2) + (3)" is to apply to crane operation with boom (3) extended even if only slightly.

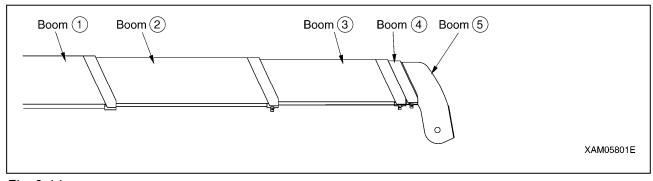

Fig. 3-14

4. "Boom (1) + (2) + (3) + (4)": With booms (2) and (3) fully extended, booms (4) and (5) are extended at the medium (half of the " ■ mark" passes boom (3)).
"Boom (1) + (2) + (3) + (4)" is to apply to crane operation with booms (4) and (5) extended even if only slightly.

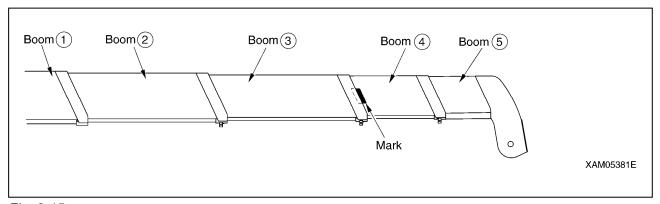

Fig. 3-15

5. "Boom (1) + (2) + (3) + (4) + (5)": All the booms are fully extended.

"Boom (1) + (2) + (3) + (4) + (5)" is to apply to crane operation with half of the " ■ mark" on boom (4) passes boom (3).

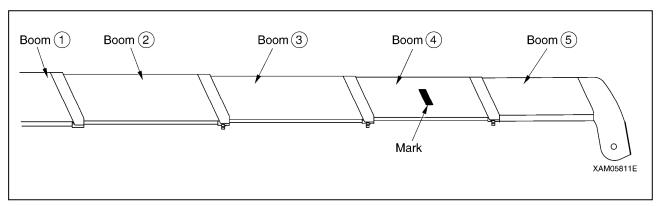

Fig. 3-16

3-14 12/2022 MC305CB-3

Rated Total Load Chart for Standard Specification

- 1. All rated total loads are indicated in kilograms.
- This load radius shown in this chart is based on practical working including boom deflection due to loading. The crane user must calculate and compensate for boom deflection as the load is lifted.
- Deductions from rated total loads must be made for the weight of hook block, ball/hook, slings, rigging or other suspended gear.

- 4. The slewing range will be restricted if the outrigger angle is not at the standard extension.
- 5. The Rated Total Load Chart capacities are based on using the factory supplied Standard Wire Rope. If you replace the wire rope, use the correct specification, that meets or exceeds the standard wire rope strength and specification.
- 6. Standard wire rope specification: 6xWs (26) IWRC, 8 mm diameter, 73 m Specified breaking load: 42.4 kN

Rated Total Load Chart for 850 kg Searcher Hook

- This Rated Total Load Chart shows the maximum allowable capacities. These rated total loads are based on the machine standing level on a firm ground supporting surface, under ideal job conditions and a freely lifted load.
- Sufficient design tolerance must be used to ensure adequate ground support surface design. The rated total loads are for static conditions only, and do not include dynamic effects of slewing, extending, retracting, lowering, raising, wind or adverse conditions. Crane users must reduce rated total loads ratings to take all conditions into account.
- The Working radius shown in the Rated Total Load Chart is based on practical working radius including boom deflection due to loading. The crane user must calculate and compensate for boom deflection as the load is lifted.
- Deductions from Searcher Hook Rated Total Load must be made for the weight of the 850 kg searcher hook 30 kg, block/ball and all rigging.
- The capacity when using the searcher hook refers to the capacity with the crane hook detached.

- 6. If boom (3) is extended to any extent, work should be performed within the capacity for "8.145 m Boom".
- If boom (4) is extended to any extent, work should be performed within the capacity for "10.315 m Boom".
- 8. When more than one half of the third mark is exposed from the boom (3), work should be carried out within the performance for the "12.485 m Boom".
 All capacities above the bold line are based on structural strength and other limitations.
 All other rated total loads are based on stability not exceeding 75% of tipping loads.
- 9. Crane users must consult the Operators Manual for complete details about assembly, operation, maintenance, configuration, and its limitations. Modifications to the crane, other than what is specified or supplied by the original equipment manufacturer, can result in a reduction of rated total load ratings.
- 10. This operating range chart does not include boom deflections.
- At certain working conditions, moment limiter may display bigger load value the actual load.
- 12. RESTRICTED AREA: At high boom angles, E-Boom (arm) and the hook will interfere with each other.

To avoid this interference: In SH1 position, do not operate above 30 degree boom angle.

Rated Total Load Chart for 1.5 t Searcher Hook

- When you use searcher hook, remove the main hook block. The capacity of searcher hook is the calculated under condition without the main hook block.
- 2. The working radius / lifting height chart does not include boom deflection.
- The working radius shown in the Rated Total Load Chart is based on practical working radius including boom deflection due to loading.
- Deductions from Searcher Hook Rated Total Load Chart must be made for the weight of the 1.5t searcher hook (25kg), block/ball and all rigging.
- 5. If boom (3) is extended to any extent, work should be performed within the capacity for boom (1) + (2) + (3).

- 6. If boom (4) is extended to any extent, work should be performed within the capacity for boom (1) + (2) + (3) + (4).
- When more than one half of the mark is exposed from the boom (3), work should be carried out within the capacity for boom (1) + (2) + (3) + (4) + (5).
- 8. Rough crane operation is very dangerous. Please keep safe crane work.
- At certain working conditions, moment limiter may display bigger load value than the actual load.
- 10. When using the searcher hook, do not operate pick and carry.

WORKING RADIUS/LIFTING HEIGHT

Working Radius/Lifting Height for Standard Specification

WARNING!

- The diagram of working radius and lifting height shows the relationships the working radius of this machine, boom angle, and lifting height above the ground with no object hoisted. The diagram has been made allowing for no deflection in the boom.
- The boom (4) in the diagram of working radius and lifting height represents a state that half of the " mark" passes boom (3).

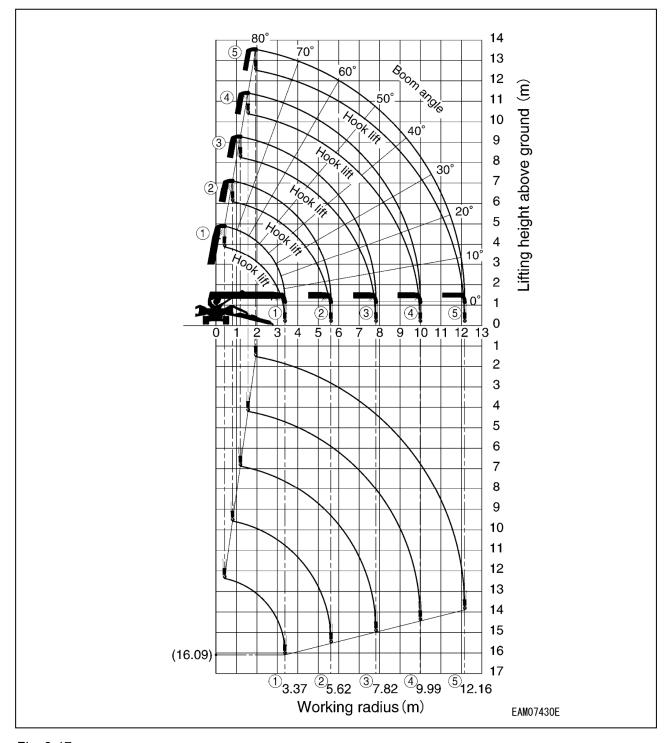

Fig. 3-17

 Point A denotes a boom angle and point B denotes a lifting height above ground in the figure at below.

The same working radius is applied to points A and B.

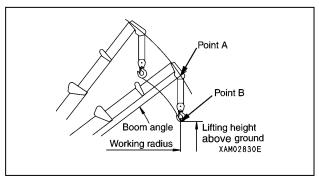

Fig. 3-18

2. The "diagram of working radius and lifting height" shows the relationships the working radius, boom angle, and lifting height at no load, allowing for no deflection in the boom. A deflection occurs in the boom when an object is hoisted, which causes the working radius to widen slightly. This is load radius. The rated total load decreases with increase in the working radius. Actual crane operation requires the planning of work, allowing for sufficient clearance more than that provided in the diagram.

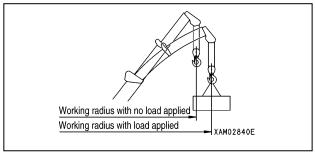

Fig. 3-19

3-24 12/2022 MC305CB-3

Working Radius/Lifting Height for 850 kg Searcher Hook

DANGER!

- When using the searcher hook, be sure to set searcher hook mode for moment limiter.
- Fall mode and searcher hook offset position must be set as "850 kg searcher hook mode" when 850 kg searcher hook is used. Searcher hook offset position must be displayed on moment limiter boom length window.
- · Never use the searcher hook and the crane hook simultaneously.

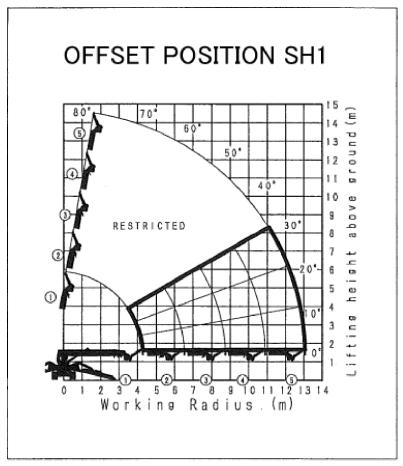

Fig. 3-20

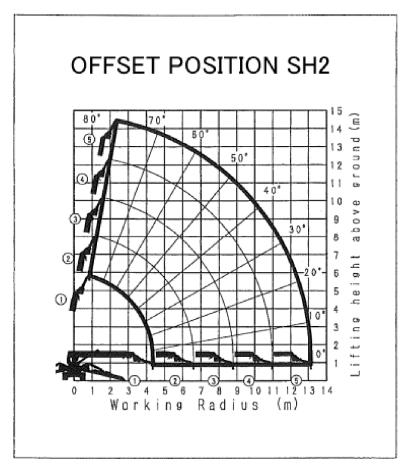

Fig. 3-21

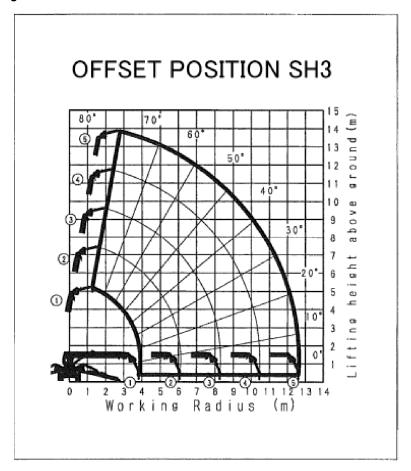

Fig. 3-22

3-26 12/2022 MC305CB-3

Working Radius/Lifting Height for 1.5 t Searcher Hook

WARNING!

- The working range / lifting height chart shows relationship between working radius, boom angle and lifting height above ground of this machine with no load hoisted, and deflection of the boom is not included.
- When using the 1.5t searcher hook, be sure to shift to 1.5t searcher hook mode, then set moment limiter to match the "actual searcher hook position".
- Do not use the searcher hook and the hook block of the crane main body at the same time.
- In searcher hook mode, do not use the hook block of the crane main body. The moment limiter
 value may not be displayed correctly, and a serious injury may result if the machine falls or
 breaks.

- 25 Tool box

4-2 12/2022 MC305CB-3

Boom

A boom with a 5-stage telescoping mechanism.

Boom Telescoping Cylinder

A telescoping cylinder built into the boom.

Boom Derrick Cylinder

A cylinder for lifting the main boom.

Angle Indicator

An angle meter for reading the boom angle by eye, located on either side of the boom.

See "Reading the Angle Indicator" on page 3-12 on how to read the angle indicator.

Winch

A device for winding and unwinding winch wire, composed of a motor and drum.

For operational methods for the winch, see "Hook Raising/Lowering Operation" on page 4-63.

Post

A frame of the slewing part on which the working machine is mounted.

Outrigger Setting Cylinder, Outrigger Extension Cylinder, Outrigger

Four devices to maintain the vehicle body level and stabilise.

For more information on how to set the outriggers in place, see "OUTRIGGER SETTING" on page 4-46. For information on how to stow the outriggers, see "OUTRIGGER STOWING" on page 4-54.

Slewing device

A device to slew the crane.

Rubber Tracks, Travel Motor and Sprocket, Track Roller, Idler, Carrier Roller

Travel device for travelling.

Travel Control

A part for travel control of the machine.

For operation method of travelling, see "TRAVELLING CONTROLS AND OPERATION" on page 4-31.

Crane Control

A part for controlling the crane.

Operation Seat

The spot where the operator sits.

For more information, see "OPERATION SEAT" on page 4-26.

Instrument Panel

Features various operation switches and monitors.

For more information, see "INSTRUMENT PANEL SECTIONS" on page 4-10.

Hook Block

A hook block to hoist the load.

Hydraulic Oil Tank

A tank for putting hydraulic oil in to operate the hydraulic oil equipment.

Working Light

A working light to illuminate the front.

Battery Unit

The power source for the machine.

For details, see "BATTERY COMPONENTS" on page 4-4.

Working Status Lamp

Indicates the moment limiter load factor status, working envelope restrictions, and charge status.

Tool Box

Space for storing items such as tools and power cables.

BATTERY COMPONENTS

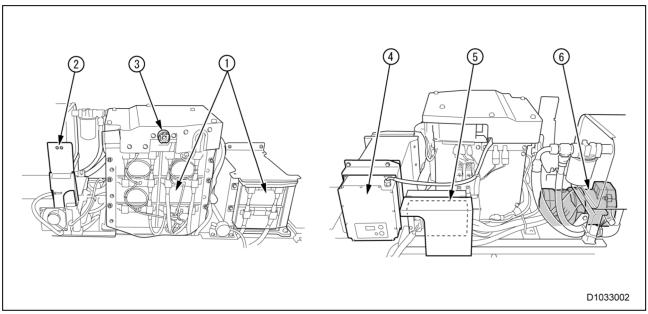

Fig. 4-2

- 1 Battery
- 2 Battery Charging Port
- 3 Disconnect Switch

- 4 Charger
- 5 Motor Controller
- 6 Electric Motor

4-4 12/2022 MC305CB-3

Battery

A power supply unit for powering the machine.

Battery Charging Port

A port for connecting the power supply cable to charge the battery.

Disconnect Switch

A switch for shutting off the power from the battery.

- LOCK: Provides power from the battery
- · UNLOCK: Isolates the battery

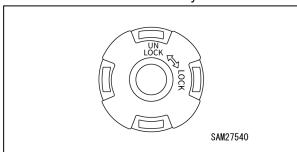

Fig. 4-3

Charger

A device that provides charging power from an input power source and controls the battery charging.

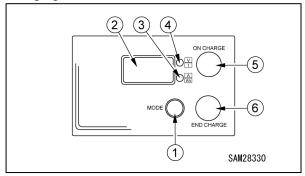

Fig. 4-4

The battery includes a display and features the following functions:

- MODE switch (1)
 Press to display information on the display.
- Display (2)
 Displays various information.
- Current/time display selector LED (3)
 Pressing the MODE switch (1) toggles the display between current and time.

 The LED lights up when displayed.
- Voltage/capacity selector LED (4)
 Pressing the MODE switch (1) toggles the display between voltage and capacity.
 The LED lights up when displayed.
- ON CHARGE lamp (5)
 Lights up when charging is in progress.
- END CHARGE lamp (6)
 Lights up when charging is complete.

Motor Controller

A controller for controlling the electric motor.

Electric Motor

A motor that converts electrical energy into mechanical energy.

OPERATING CONTROLS

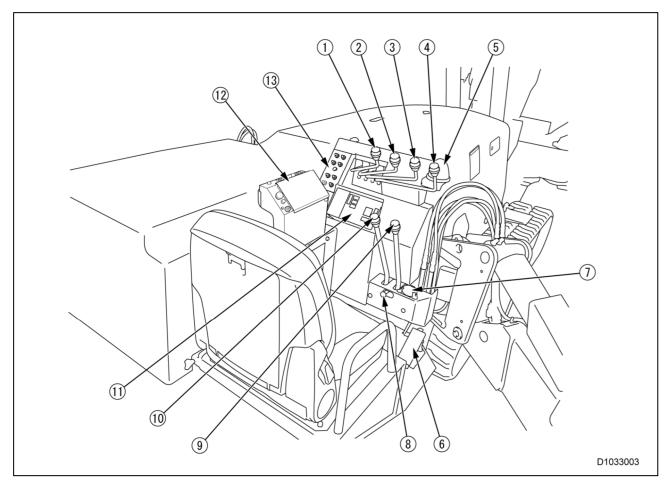

Fig. 4-5

- 1 Slewing lever
- 2 Boom telescoping lever
- 3 Winch lever
- 4 Boom derricking lever
- 5 Outrigger un-set warning lamp
- 6 Acceleration pedal
- 7 Level gauge

- 8 Travelling lock lever
- 9 Right travelling lever
- 10 Left travelling lever
- 11 Moment limiter
- 12 Instrument panel
- 13 Outrigger operation panel

4-6 12/2022 MC305CB-3

Acceleration Pedal

Use the pedal to adjust the motor speed or output.

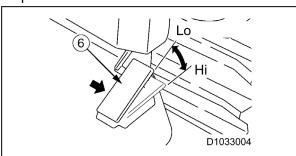

Fig. 4-6
[OUTRIGGER/CRANE MODE]

- Lo: The motor operates at the lowest speed for any operation performed.
- Hi: Depressing the pedal increases the motor speed for any operation performed.

[TRAVELLING MODE]

- Lo: The motor does not rotate regardless of travelling operations.
- Hi: Depressing the pedal increases the motor speed for travelling operations.

NOTICE:

- Depress the pedal until you reach the motor speed required for the operation being performed.
- In eco mode, the maximum motor speed may not necessarily be achieved even if the pedal is depressed to the "Full speed" position.
- The motor speed will not change if the pedal is depressed while the motor is not running.
 The motor runs when an outrigger or crane operation is input.
- Travelling operations alone will not cause the motor to run. The pedal must be depressed while performing travelling operations.

Slewing Lever

Use the lever to slew the crane boom and post.

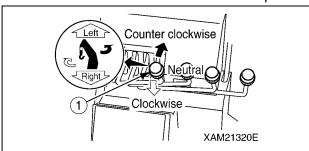

Fig. 4-7

- Slew counterclockwise (left): Press the lever forward (Left).
- Neutral: Release your hand from the lever.
 The lever returns to the "Neutral" position and the slewing stops.
- Slew clockwise (right): Pull the lever toward you (Right).

Boom Telescoping Lever

Use this lever for telescoping the crane boom.

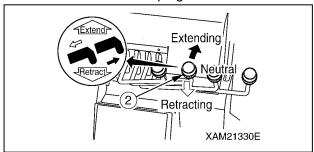

Fig. 4-8

- · Extend: Push the lever forward (Extend).
- Neutral: Release your hand from the lever.
 The lever returns to the "Neutral" position and the boom telescoping stops.
- Retract: Pull the lever toward you (Retract).

Winch Lever

Use this lever to raise/lower the hook block of the crane.

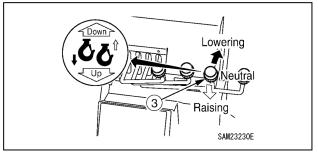

Fig. 4-9

- Lower: Push the lever forward (Down).
- Neutral: Release your hand from the lever.
 The lever returns to the "Neutral" position and the machine automatically brakes. The lowering/raising of the hook block stops.
- Raise: Pull the lever toward you (Up).

Boom Derricking Lever

Use this lever to raise/lower the hook block of the crane.

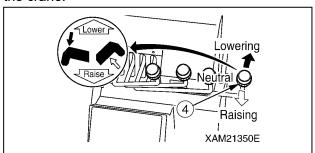

Fig. 4-10

- · Lower: Push the lever forward (Lower).
- Neutral: Release your hand from the lever.
 The lever returns to the "Neutral" position and the boom derricking stops.
- Raise: Pull the lever toward you (Raise).

Travelling Lock Lever

WARNING! When parking or crane operation, the lock lever must be placed to "LOCK" position.

Use this lever to "LOCK" the travelling levers.

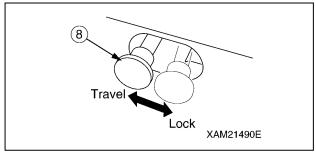

Fig. 4-11

- · Lock: Push the lever to the right.
- Travel: Push the lever to the left.

NOTICE: Operate the travelling lock lever while the left and right travelling levers are at the "Neutral" position.

Left/Right Travelling Lever

Use these levers to move the machine forward/backward, stop, slew, and to adjust the travelling speed.

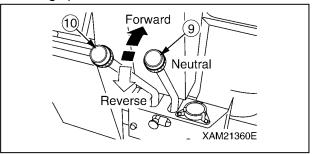

Fig. 4-12

• Forward: Push the left and right levers

forward at the same time.

• Neutral: Release your hands from left and

right levers at the same time.
The levers return to the "Neutral"

position and the machine

automatically brakes and stops at

that position.

Backward: Pull the left and right levers toward

you at the same time.

• Left turn: Release your hand from the left

lever and operate the right lever

forward or backward.

• Right turn: Release your hand from the right

lever and operate the left lever

forward or backward.

· Spin turn: Operate the left and right levers to

the opposite direction.

The left and right crawlers turn to the opposite direction, allowing you

to make the spin turn.

Moment Limiter

A safety device that uses sensors to detect the machine status and prevent overload.

Instrument Panel

Houses the operation switches and a monitor.

Outrigger Operation Panel

Used to select the machine operation mode ("Travel", "Outrigger", and "Crane") and to operate the outriggers.

INSTRUMENT PANEL SECTIONS

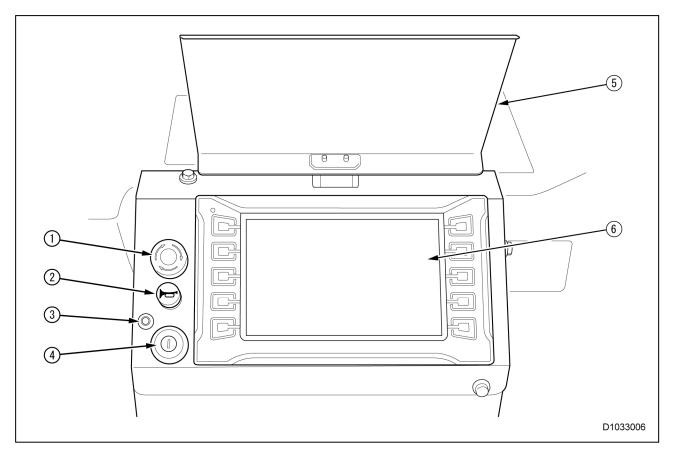

Fig. 4-13

- 1 Emergency stop switch (EMO)
- 2 Horn switch
- 3 Power lamp

- 4 Starter switch
- 5 Monitor cover
- 6 Monitor

4-10 12/2022 MC305CB-3

Horn Switch

Use this switch to honk the horn.

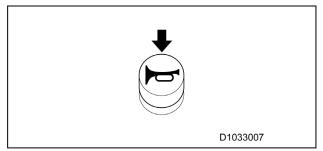

Fig. 4-14

· Honking the horn: Press the switch.

NOTICE: The horn only sounds while the switch is pressed. The horn stops as soon as the switch is released.

Emergency Stop Switch (EMO)

Use this switch in case of an error in the machine to stop the machine for emergency.

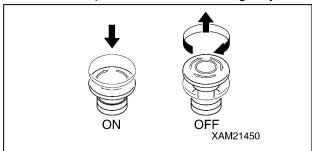

Fig. 4-15

- ON: Press the switch. The motor stops.
- OFF: Turn the switch clockwise (direction of the arrow in the figure). The switch returns to its original position, and the emergency stop condition is cleared.

NOTICE: When restarting the machine after overriding, be sure to turn the emergency stop switch (EMO) to the "OFF" position before starting the machine.

Starter Switch

The Starter Switch is used to start and stop the machine.

- OFF: You can insert/remove the key at this position. All the switches in the electrical system are turned off and the machine stops.
- ON: Electricity runs into all the circuits.

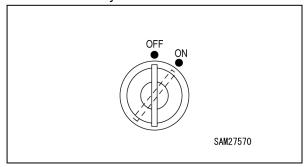

Fig. 4-16

Monitor Cover

A cover used to protect the monitor. The cover should be closed when the monitor is not being used.

Monitor

A display unit used to display the machine body status

For details on the items displayed, see "MONITOR" on page 4-12.

Power Lamp

Lights up when the starter switch is in the "ON" position or when the battery is being charged.

NOTICE: When the battery is being charged, the lamp lights up even if the starter switch is in the "OFF" position.

MONITOR

Starting Screen

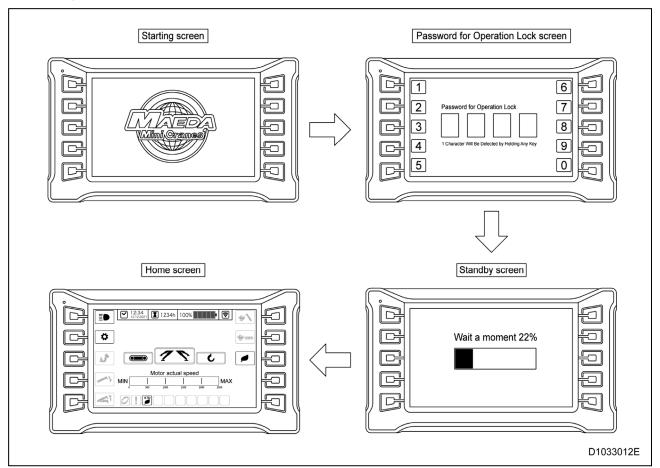

Fig. 4-17

When the starter switch is turned to the "ON" position, the starting screen is displayed.

If operation lock password entry is activated then after the startup screen is displayed, the operation lock password screen will display.

Next, a standby screen appears before switching to the home screen.

4-12 12/2022 MC305CB-3

Home Screen

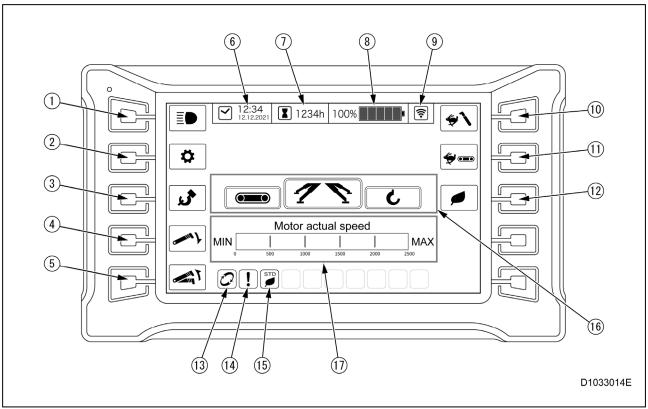

Fig. 4-18

- 1 Working light switch
- 2 User mode switch
- 3 Hook stowage switch
- 4 Boom stowage switch
- 5 Boom lift bypass switch
- 6 Time display
- 7 Hour meter display
- 8 Battery level indicator
- 9 Radio remote control system connection indication

- 10 Crane high-speed switch
- 11 Travelling high-speed switch
- 12 Eco mode switch
- 13 Consumables display
- 14 Error display
- 15 Eco mode display
- 16 Operation selection status display
- 17 Motor speed display

Working Light Switch

Used to turn on the working light at the front of the machine.

Yellow indication: Working light on

White indication: Working light off

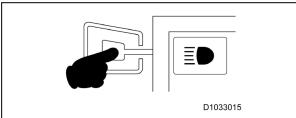

Fig. 4-19

User Mode Switch

Used for user settings.

Press the switch to switch to user mode.

For more information on user mode, see "User Mode" on page 4-18.

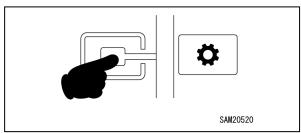

Fig. 4-20

Hook Stowage Switch

Used when stowing the hook.

For more information on stowage procedures, see "Crane Stowing Operation" on page 4-66.

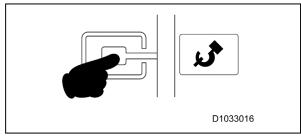

Fig. 4-21

Boom Stowage Switch

Used when stowing the boom.

For more information on stowage procedures, see "Crane Stowing Operation" on page 4-66.

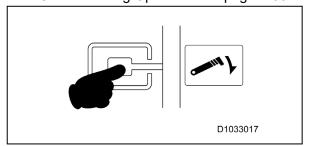

Fig. 4-22

Boom Lift Bypass Switch

Used to lift the boom in overload state
Lifting is possible only while the switch is pressed
down. For more information on the operation of
Boom Lift Bypass Switch, see "Recovery
Operation after Auto Stop" on page 4-70.

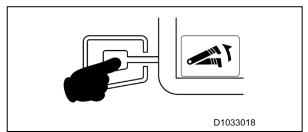

Fig. 4-23

Time Display

Displays the time set.

There may be an offset in the time displayed, depending on machine usage conditions. If so, reset as described in "Time Setting" on page 4-21.

Hour Meter Display

Displays cumulative hours of operation.

Battery Level Indicator

CAUTION:

- When storing the machine, make sure the remaining battery charge is 50% or more.
- When the battery level reaches 0%, take one of the following actions to prevent overdischarge and performance deterioration:
 - ·Charge the battery within 1 hour.
 - If charging is not possible, disconnect the battery to prevent consumption and promptly move the machine to a location where it can be recharged.

If the battery is consumed to the point of over-discharging, it will fail and require replacement.

Displays the battery level.

NOTICE: The flash sign at the centre of the indicator appears only when the battery is being charged.

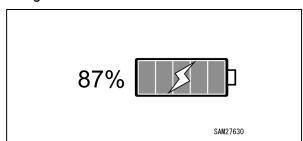

Fig. 4-24

Charge	Icon
0%	
1 to 20%	
21 to 40%	
41 to 60%	
61 to 80%	
81 to 100%	

- The icon blinks when the charge is between 1% and 10%.
- The alarm buzzer emits two short beeps intermittently by an interval of 30 seconds when the charge is 20% or less.
- The alarm buzzer emits a short beep intermittently by an interval of 30 seconds when the charge is 10% or less.
- When the battery level reaches 0%, a charging message and alarm buzzer will sound.

Radio Remote Control System Connection Display

Displays the current radio remote control system connection status.

- On: The radio remote control system is connected.
- Off: The radio remote control system is not connected.

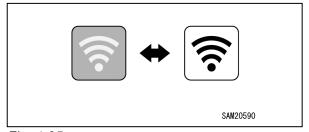

Fig. 4-25

Crane High-Speed Switch

Used to switch the operating speed of the crane during the crane operation.

- Yellow: High-speed crane mode
- · White: Low-speed crane mode

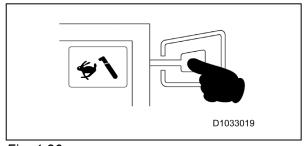

Fig. 4-26

NOTICE: Always set the work selector switch on the outrigger operation panel to the "Crane" position. If the work selector switch is at other position than "Crane", the crane high-speed switch does not work.

Travelling High-Speed Switch

Used to switch travelling speed mode of the machine.

- Yellow: High-speed travelling mode
- · White: Low-speed travelling mode

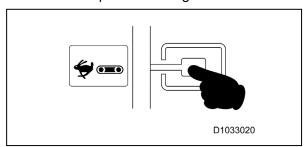

Fig. 4-27

NOTICE: Always set the work selector switch on the outrigger operation panel to the "Crane" position. If the work selector switch is at other position than "Crane", the crane high-speed switch does not work.

Eco Mode Selector Switch

Used to select eco mode.

The mode is toggled each time the switch is pressed.

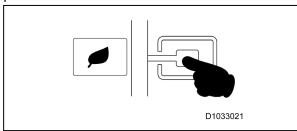

Fig. 4-28

Consumables Display

Lights up if the replacement time for consumables is approaching or has been exceeded.

For more information on the display content, see "Warning Display" on page 4-23.

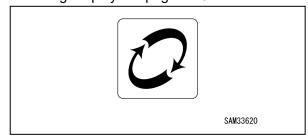

Fig. 4-29

Error Display

Displays illuminated warnings.

For more information on the display content, see "Warning Display" on page 4-23.

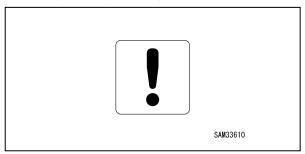

Fig. 4-30

Eco Mode Display

Displays the eco mode status currently set.

• STD: Standard mode

The motor speed is not limited.

This allows the machine to operate at its highest performance level.

• ECO1: Eco mode 1

The motor speed upper limit is restricted to 2,250 rpm.

Limiting the maximum motor speed ensures a good balance between workability and battery consumption.

• ECO2: Eco mode 2

The motor speed upper limit is restricted to 1,700 rpm.

Operating speed may be reduced, but battery consumption is kept to a minimum.

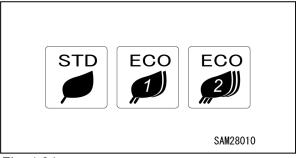

Fig. 4-31

Operation Selection Status Display

Indicates the status selected using the operation selector switch.

The status cannot be selected on the screen.

For details on the operation selector switch, see "OUTRIGGER OPERATION PANEL" on page 4-44.

Motor Speed Display

Displays the current motor speed.

The meter display varies as the motor speed changes in accordance with how far the acceleration pedal is depressed.

User Mode

When the User Mode Switch is pressed on the Home Screen, the User Mode is displayed.

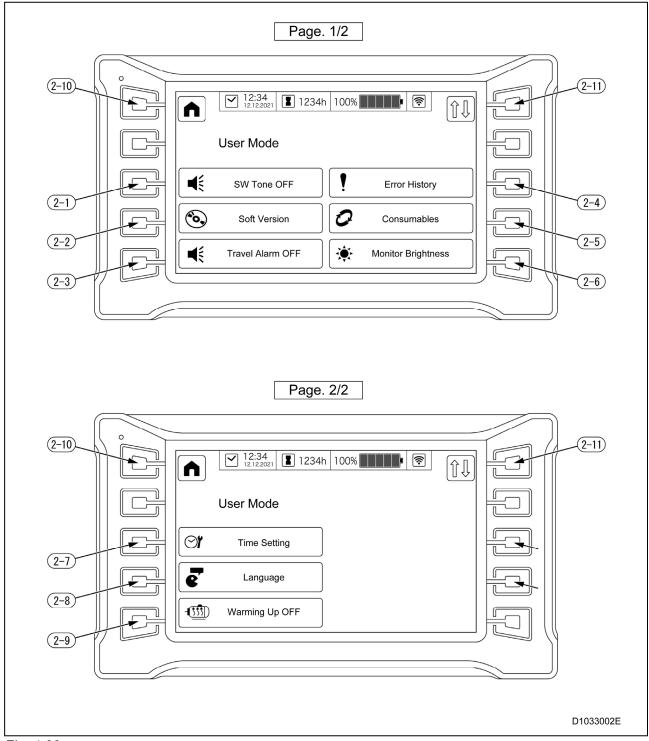

Fig. 4-32

- (2-1) Switch Tone ON/OFF Change
- (2-2) Software Version Display
- (2-3) Travel Alarm ON/OFF Selection
- (2-4) Error History Display
- (2-5) Consumables Display
- (2-6) Monitor Brightness Adjustment

- (2-7) Time Setting
- (2-8) Language Change
- (2-9) Warming Up ON/OFF Selection
- (2-10) Home Switch
- (2-11) Display Page Change

4-18 12/2022 MC305CB-3

Switch Tone ON/OFF Change

When the switch is pressed, switch tone can be turned OFF and ON.

- OFF: No tone is heard when switches are operated.
- ON: Tone is heard when switches are operated.

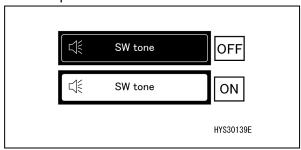

Fig. 4-33

Software Version Check

The version of the controller software and monitor can be checked.

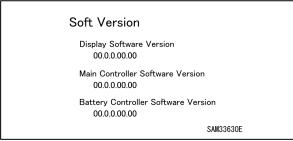

Fig. 4-34

Travel Alarm ON/OFF Selection

Allows the travel alarm to be switched on or off.

- ON: The alarm sounds when the machine is travelling.
- OFF: The alarm does not sound when the machine is travelling.

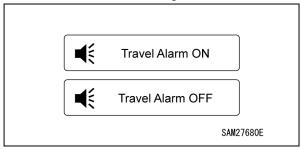

Fig. 4-35

Error History Display

Allows review of current or past errors.

- · Red text: Current errors
- · White text: Past errors

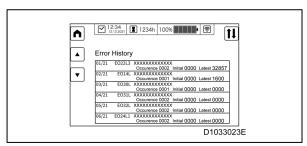

Fig. 4-36

For more information on error codes, see "Monitor Error Codes" on page 5-82.

Consumables Display

Lists consumables and indicates the time until the next scheduled replacement.

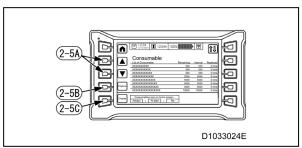

Fig. 4-37

For more information on consumables list, see "CONSUMABLES" on page 5-12.

If a consumable has been replaced, use the ▲ or ▼ adjuster switches (2-5A) to select the consumable replaced. Once a consumable has been selected, hold down the replacement switch (2-5B) to update the replacement time. Updating increments the number of replacements by 1 and resets the time remaining.

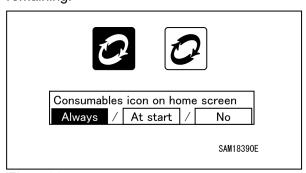

Fig. 4-38

If "Always" or "At start" is selected for the consumable icon display selection (2-5C), yellow text and an yellow icon will appear on the Home screen if the remaining time is 30 h or 3 days, while red text and a red icon will appear on the Home screen when the remaining time is 0 h or 0 days.

Replace consumable promptly. Continued use past the recommended replacement date may be dangerous and harm the machine.

NOTICE: We recommend setting the consumable icon display selection (2-5C) to "Always."

Always: Consumable icons are constantly displayed on the Home screen if the replacement time is approaching or has been exceeded.

At start: Consumable icons are displayed only for 30 seconds after displaying the Home screen if the replacement time is approaching or has been exceeded.

No: Consumable icons are not displayed on the Home screen, even if the replacement time is approaching or has been exceeded.

Monitor Brightness Adjustment

The monitor brightness can be adjusted.

Make adjustments with ◀ or ▶ of adjustment switch(2-6A).

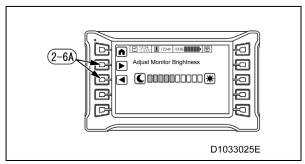

Fig. 4-39

4-20 12/2022 MC305CB-3

Time Setting

The time setting, 24/12 hour display and summer time ON/OFF can be changed.

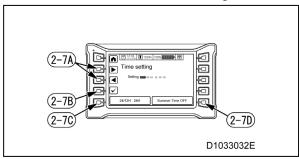

Fig. 4-40

Setting the time

Select the date and time desired to be changed with ◀ or ▶ of the adjustment switch (2-7A) and press the check mark (2-7B).

(The part whose background is white is selected.)

When the word colour turns red, editing becomes possible.

Make adjustments with ◀ or ▶ of the adjustment switch in this condition.

When the check mark is finally pressed, editing is completed.

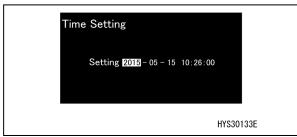

Fig. 4-41

24/12 Hour Display Change

When the switch (2-7C) is pressed, time display can be changed to either 24 hour display or 12 hour display.

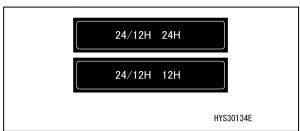

Fig. 4-42

Summer Time ON/OFF

When the switch (2-7D) is pressed, ON or OFF of summer time can be selected.

• Summer Time OFF: Originally set time is

displayed.

Summer Time ON: Time display is moved

up by one hour.

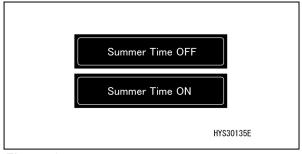

Fig. 4-43

Language Change

The display language can be changed and reset.

 English: Switches the display language to English.

 Japanese: Switches the display language to Japanese.

Reset: Switches to the default language setting.

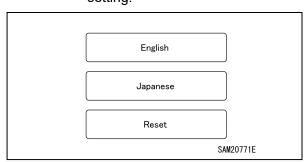

Fig. 4-44

Warming Up ON/OFF Selection

Allows warming-up to be switched ON or OFF.

- ON: When the starter switch is turned to the "ON" position, the motor will run even if no operation is being performed. This can be cancelled by turning the key to OFF, or by operating the crane, outriggers, or travelling.
- OFF: When the starter switch is turned to the "ON" position, the motor will not run unless an operation is being performed. Operating a lever will make the motor run.

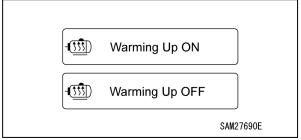

Fig. 4-45

NOTICE: It is recommended that warming-up be turned on in cold conditions, as the machine and the hydraulic oil may take time to warm up.

Home Switch

• Short press: Returns one page.

• Long press: Returns to home page.

NOTICE: The function of the Home switch is the same for confirmation and setting screens.

Display Page Change

Each time the switch is pressed, the page changes: "page 1/2 to page 2/2 to page 1/2".

NOTICE: The function of the Display Page Change switch is the same for confirmation and setting screens if they cover more than one page.

4-22 12/2022 MC305CB-3

Warning Display

CAUTION: If the warning monitor illuminates in red, immediately stop work and stop the machine, or set it to low idle. Then, immediately inspect the applicable part and take action for it.

If a fault occurs in the machine, the warning display on the monitor illuminates in red.

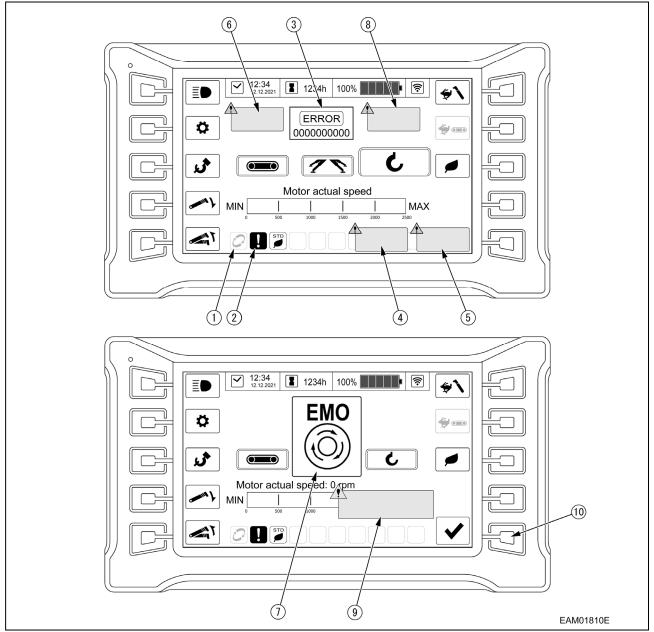

Fig. 4-46

- 1 Consumables display
- 2 Abnormality display (abnormality detected)
- 3 Error code display
- 4 Overheating display
- 5 Emergency stop reset guide display
- 6 Warming up display
- 7 Emergency stop display
- 8 Neutral Lever Position Abnormality Display
- 9 Battery charging guide display
- 10 Alarm buzzer shut off switch

If warning and/or error code is displayed, check the warning content and error content.

If an error code is displayed, see "Monitor Error Codes" on page 5-82 and correct the problem.

Consumables Display

Lights up if the replacement time for consumables is approaching or has been exceeded.

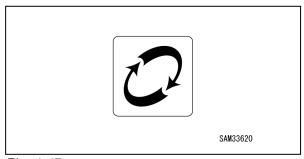

Fig. 4-47

· Yellow indication: Consumables are

approaching the time for replacement. Replace the

consumable.

Red indication: Consumables are past the

time for replacement.
Replace consumables

immediately.

 When displayed, replace the relevant consumable and take the appropriate action.
 See "CONSUMABLES" on page 5-12.

Abnormality Display

A warning is displayed if an abnormality occurs continuously in the machine.

Check the error code displayed at the same time.

Error Code Display

Displays an error code for the current error. If multiple errors occur simultaneously, check the error history display in user mode.

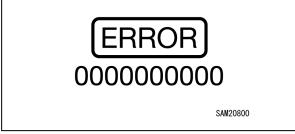

Fig. 4-48

NOTICE: Error codes are also displayed if faults other than consumable related indications are displayed. For more information on error codes, see "Monitor Error Codes" on page 5-82, and take corrective action.

Overheating Display

Displayed when the machine is overheating, and the motor stops. The message disappears when the temperature has cooled, and the motor runs again.

- · Motor overheat warning
- · Motor controller overheat warning
- · Hydraulic oil overheat warning

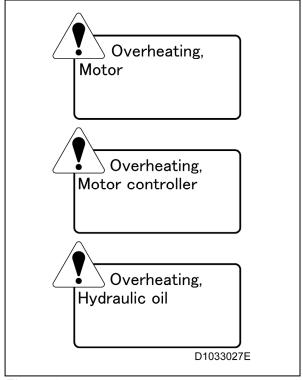

Fig. 4-49

Emergency Stop Reset Guide Display

Displayed when the override switch is turned to ON and the safety system is disengaged.

The message disappears after three minutes or if the starter key is turned to the "OFF" position, allowing the safety system to function.

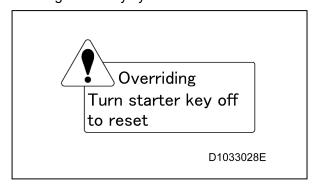

Fig. 4-50

4-24 12/2022 MC305CB-3

Warming Up Display

Displayed when the machine is warming up.

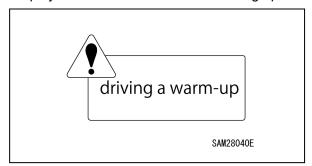

Fig. 4-51

Emergency Stop Display

Displayed when the emergency stop switch has been pressed. The motor is not turning while this is displayed.

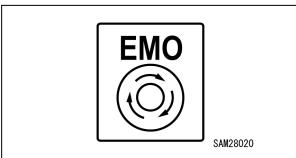

Fig. 4-52

Neutral Lever Position Abnormality Display

The display will indicate that there was input by either the traveling or crane operation levers when the following conditions were met. At the same time there will be a quick beeping sound.

- Lever input was made when the starter switch was turned to the "ON" position and the monitor startup screen was displayed.
- Lever input was made when the emergency stop was released.
- Lever input was made when an emergency stop was made by radio control and the emergency stop status was released.

When this display appears, the motor will not run.

When the display appears, perform the operation again with no lever input.

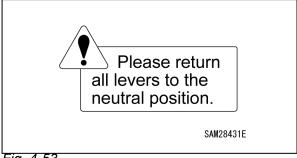

Fig. 4-53

Battery charging guide display

Indicates when the battery is running low.

When the battery is charging, or the remaining charge is over 5%, the display will turn off.

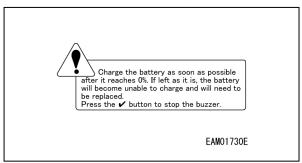

Fig. 4-54

Alarm buzzer shut off switch

The alarm buzzer sounds when the battery charging guide display is shown.

To temporarily stop the alarm buzzer, press the alarm buzzer shut off switch on the bottom right of the monitor.

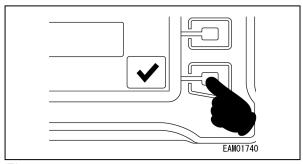

Fig. 4-55

OPERATION SEAT

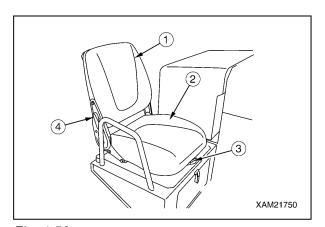

Fig. 4-56

- 1 Back seat
- 2 Seat
- 3 Slide adjusting lever
- 4 Reclining adjusting lever

WARNING!

- Adjust the operation seat before driving.
 Be sure to make adjustment especially after someone else has used it.
- Press your back against the back seat of the operation seat and adjust the operation seat so that you can operate the acceleration pedal, control levers and travelling lever without any difficulty.
- Never adjust the operation seat while driving the machine.

Seat Forward/Backward Slide Adjustment

Use the slide adjusting lever (3) to make adjustment.

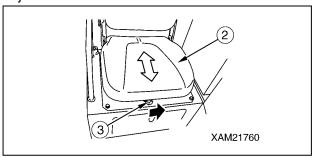

Fig. 4-57

- While pushing the slide adjusting lever (3) leftward, move the seat (2) forward/ backward.
- 2. After adjusting the seat (2), release your hand from the slide adjusting lever (3). The seat (2) is fixed to the position.

NOTICE: The forward/backward slide adjustment distance is 120 mm in 6 steps.

Reclining Adjustment

Use the reclining adjusting lever (4) to make adjustment.

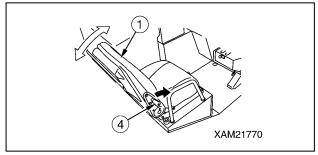

Fig. 4-58

- While pushing the reclining adjusting lever
 (4) forward, move the backseat (1) forward/ backward.
- After adjusting the back seat (1), release your hand from the reclining adjusting lever (4).

The back seat (1) is fixed to the position.

NOTICE: The seat reclining angle can be adjusted up to 75°.

4-26 12/2022 MC305CB-3

COLD WEATHER OPERATION

Cautions When Snow Covered or Frozen

WARNING! ALWAYS observe followings to prevent serious injuries and death accidents when travelling over a snow covered ground or frozen road for unavoidable reason.

- The snow covered grounds and frozen roads cause slips even when the inclination is small, so decrease the speed when travelling and avoid starting sudden, stopping sudden stop and slewing sudden. Uphill and downhill are especially likely to cause slips and thus dangerous.
- Ground of the frozen road becomes soft when the air temperature rises and causes the Machine travels and other operations to be unstable. Be very careful.
- Under cold weather, check that the load to be hoisted is not frozen stuck to the ground or other substance. Attempt to hoist without knowing the load is frozen stuck to the ground or other substance is dangerous.
- Do NOT directly contact metal surface with your body part such as a finger or hand under cold weather.
- Attempt to contact the metal surface of the Machine under harsh cold weather may cause the skin to stuck frozen to the metal surface.
- Remove snow and/or ice laid on the Machine that causes the safety nameplates to be hard to read. Be especially careful to securely remove those that are on the boom and thus may fall.

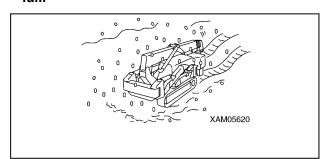

Fig. 4-59

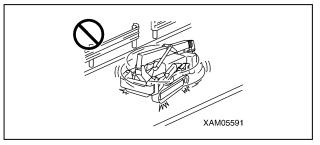

Fig. 4-60

Cautions under Cold Weather

WARNING!

- Remove snow from and defreeze the slew gear, boom and winch related parts, and check the movements before work.
- · Warm up enough.
- Attempt to operate the operation levers and switches without enough warm-up causes the Machine to react dull, and may result in unexpected accidents.
- Increase the oil temperature of the hydraulic circuit by relieving the oil pressure (let the pneumatic oil to escape to the hydraulic oil tank by raising to above the hydraulic circuit set pressure) by using operation lever. Doing so improves the Machine reactions and prevents improper operations.

Fig. 4-61

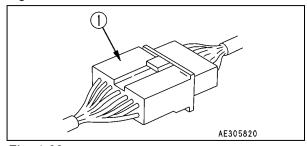

Fig. 4-62

STARTING THE MACHINE

Checking before Operation

Perform the steps described in this section before starting work each day.

Visible Checks

For more information on inspection, see "Pre-Start Visible Checks" on page 5-22.

Checking after Starting the Machine

For more information on inspection, see "Post-Start Inspection - After Starting the Machine" on page 5-27.

WARNING! Verify that there is no one and obstacle around when starting the machine.

CAUTION:

- Verify that the switch on the control box for the radio controller is at the "OFF" position.
- The machine takes a while to start after the start switch has been turned to ON.
 The battery's specification is such that it takes a while to start up, so this does not indicate a fault.
- If the machine does not start, check the battery charge and the disconnect switch.
- Even after the machine has started, the motor will not run unless an operation is performed. Use the power lamp to check that the machine has started.

Insert the key into the starter switch and turn the to the "ON" position.

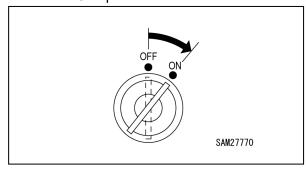

Fig. 4-63

OPERATIONS AND CHECKS AFTER STARTING THE MACHINE

WARNING!

- If an abnormality in the machine occurs during the warm-up operation, turn the starter switch to the "OFF" position immediately.
- Always perform the warm-up operation.
 The sufficient warm-up operation is necessary particularly when it is cold.
- Insufficient warm-up operation will slow down the movement response of the travelling system or crane system to the operation levers, resulting in serious accidents.
- Always check the operation of the crane after warm-up operation.
- Be careful not to let the hook block interfere or collide with the boom.
- Be careful not to let the boom hit the operator or this machine when slewing the boom.
- If you find any abnormality during the crane operation check, stop the machine immediately for emergency and repair.
- Using the system in abnormal condition can result in serious accidents.

CAUTION:

- The appropriate temperature of the hydraulic oil is 50 to 80 °C.
 Even when operating at low temperature by necessity, increase the temperature of the hydraulic oil to about 20 °C.
- In low temperatures, turn on warm-up operation in User Mode, and operate the electric motor continuously until the machine has warmed up.
- Do not perform any sudden operations until the warm-up operation is complete.

4-28 12/2022 MC305CB-3

Perform the warm-up operation as follows after starting the machine.

 Operate the work selector switch to the "Outrigger" position.

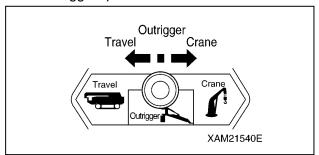

Fig. 4-64

- 2. See "OUTRIGGER SETTING" on page 4-46 and set the outriggers.
- 3. Operate the work selector switch to the "Crane" position.
- See "Before Crane Operations" on page 4-61 to loosen the hook block from the stowing position.
- 5. Step on the acceleration pedal (6) to the half of the full stroke.

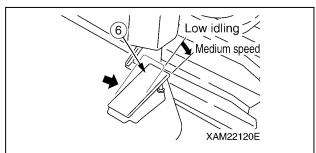

Fig. 4-65

 Operate the boom derricking lever (4) slowly forward/backward and move the boom derrick cylinder up/down until it reaches the stroke end. Check if there is any abnormality with the operation. If there is any abnormality, repair.

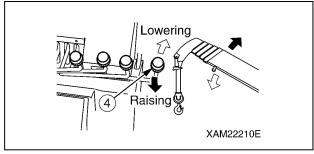

Fig. 4-66

7. Operate the boom telescoping lever (2) slowly forward/backward to extend/retract the boom until it reaches the stroke end. Check if there is any abnormality with the operation.

If there is any abnormality, repair.

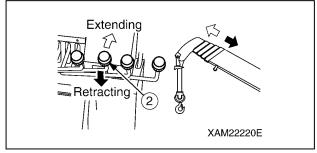

Fig. 4-67

8. Operate the winch lever (3) slowly forward/ backward to check if the hook block is smoothly raised/lowered. Also check if the hook block immediately stops and the winch drum does not wind in mess when the winch lever returns to the "Neutral" position.

If there is any abnormality, repair.

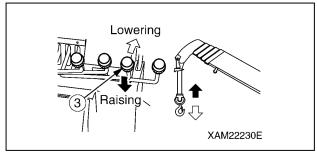

Fig. 4-68

 Operate the slewing lever (1) slowly forward/backward to check if the crane smoothly slews clockwise (right) and counterclockwise (left) for 360 degrees or more. Also check if the crane stops immediately when the slewing lever returns to the "Neutral" position.

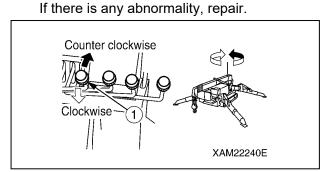

Fig. 4-69

STOPPING THE MACHINE

CAUTION:

- Verify that the main switch at the radio controller control box unit is at the "OFF" position.
- Confirm that the starter switch is not in the ON position. The battery may become drained if the machine is left in this state.
- 1. Turn the starter switch to the "OFF" position.

The machine will stop.

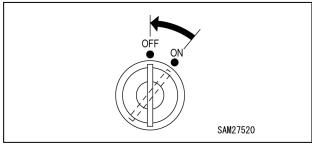

Fig. 4-70

2. Remove the starter switch key.

NOTICE: The power lamp may stay on after the key has been removed, but this is not a fault.

INSPECTION AFTER STOPPING THE MACHINE

CAUTION:

- When storing the machine, make sure the remaining battery charge is 50% or more.
- When the battery level reaches 0%, take one of the following actions to prevent over-discharge and performance deterioration:
 - ·Charge the battery within 1 hour.
 - If charging is not possible, disconnect the battery to prevent consumption and promptly move the machine to a location where it can be recharged.

If the battery is consumed to the point of over-discharging, it will fail and require replacement.

- Visibly check for oil leakage, and check around the crawlers, crane, and exterior of the machine. If you find any leakage or abnormality, fix the problem.
- Dead leaves and papers around the machine will cause fire. Remove the dead leaves and papers.
- Clean off mud on the crawlers and outriggers.
- Charge the battery to at least 50%.

NOTICE: When the battery is being charged, the lamp lights up even if the starter switch is in the "OFF" position.

4-30 12/2022 MC305CB-3

TRAVELLING POSITION

WARNING!

- When moving this machine self-propelled, take the "travelling posture" with which the boom, hook block, and outriggers are stowed.
- Travelling or travelling hoist with the boom extended is essentially prohibited.
 This will overturn the machine, causing serious injury accidents.
- Do not use this machine for other purpose than the major purpose such as using it for carrying the load on the machine.
- Follow the local laws and regulations if driving the machine on public roads.

Take the travelling posture shown on the below when moving the machine.

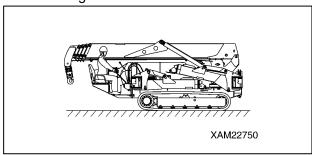

Fig. 4-71

- See "Crane Stowing Operation" on page 4-66 to stow the crane. Stow the hook block in the specified position.
- See "OUTRIGGER STOWING" on page 4-54 to stow the outriggers.

TRAVELLING CONTROLS AND OPERATION

WARNING! Not observing these cautions in travelling will result in serious accidents.

Cautions When Travelling

- When travelling, stow hook and outrigger, and make sure the surrounding safety.
- When stowing outriggers, insert each position pins completely to lock.
- · Be seated to operate travelling.
- Travelling over the boulder stones or a stump not only causes the overturning of the machine, but also gives an impact to the machine (especially around crawlers), causing breakage.
- Avoid or remove the obstacles not to travel over it whenever possible.
- If you have to travel over the obstacles by necessity, be sure to take the "travelling posture" to lower the centre of gravity, and reduce the travelling speed as much as possible so that the machine will go over the obstacles at the centre of the crawlers.

NOTICE: See "TRAVELLING POSITION" on page 4-31 for the travelling posture of the machine.

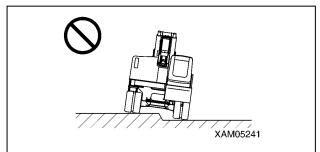

Fig. 4-72

Allowable Water Depth

Use this machine in the water of the depth of under the centre of the idler (1) where the muffler beneath the machine body doesn't go under water.

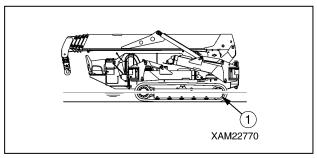

Fig. 4-73

Cautions on Upward/Downward Slope

WARNING!

- If the machine tilts for "15 degrees" or more forward, backward, leftward, or rightward while travelling, the machine may overturn. Do not travel on the slope of more inclination.
- Be sure to switch the travelling high-speed switch to the "OFF" (low speed) position when travelling on the slope.
- Travelling on the slope in the high-speed travelling mode may result in overrun on the downward slope.
- The slopes inclined for 15 degrees or more presents overturning hazard. Do not travel on these slopes.
- Be sure to switch the travelling high-speed switch to the "OFF" (low speed) position when travelling on the slope. The machine may overrun.
- Never change the direction on the slope or cut the slope horizontally.

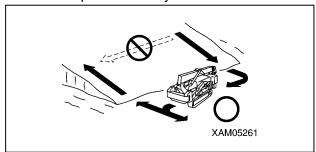

Fig. 4-74

 Travel safely such as by going down to the level ground and taking a detour.

- Operate the acceleration pedal and travelling levers to decrease the travelling speed as much as possible when going down the slope.
- Operating the travelling lever to the "Neutral" position automatically brakes the machine, but may overrun when going down the slope at high speed.
- Direct the machine perpendicular to the slope and the operation seat must be the side of the uphill when travelling on the slope.

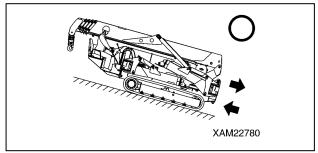

Fig. 4-75

4-32 12/2022 MC305CB-3

STARTING TRAVELLING MACHINE

WARNING!

- Do not allow anyone to come around the machine.
- Put away all the obstacles on the travelling path.
- Check for projections and grooves on the travelling path especially when going backward. Fix the travelling path.
- Check the safety around the machine and honk a horn before starting travelling the machine.
- When travelling forward, depress the acceleration pedal gently and operate the left and right travelling levers slowly at the same time. Check the travelling speed of the machine.
- Do not make sudden start especially when you are going backward. You can cause serious accidents.
- The front of the machine will be the blind corner. Be extremely careful when travelling forward.
- If you cannot verify the safety because the travelling direction is the blind corner, stop travelling and check the safety in the travelling direction. Staff a guide person if necessary depending on the work site situation.

Preparation before Starting Travelling

 Operate the work selector switch on the outrigger operation panel to the "Travel" position.

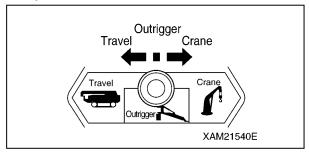

Fig. 4-76

2. Push down the travelling lock levers (8) to the "Travel" position.

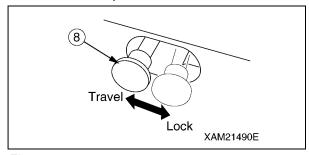

Fig. 4-77

3. Depress the acceleration pedal gently. NOTICE: The machine will not move unless the acceleration pedal is depressed, even if the travelling levers are moved.

Travelling Forward

Operate the left and right travelling levers at the same time.

 Push the left and right travelling levers slowly forward to travel forward.

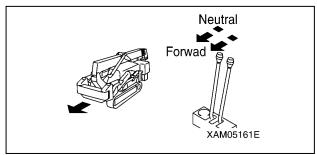

Fig. 4-78

Travelling Backward

Operate the left and right travelling levers at the same time.

 Pull the left and right travelling levers slowly toward you to travel backward.

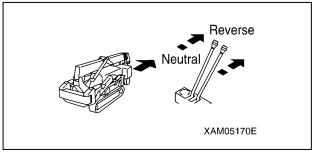

Fig. 4-79

CHANGING MACHINE TRAVELLING MODE

WARNING!

- Choose the appropriate travelling speed to the ground and road surface conditions while driving the machine.
- You can choose "high-speed travelling mode" or "low-speed travelling mode" by pressing the travelling high-speed switch.
- Always set the travelling high-speed switch to the "OFF" (low speed) when driving on the slope. Travelling on the slope in the high-speed travelling mode may cause overrun on the downward slope.
- Be sure to stop the machine before changing the travelling speed mode.

Changing Travelling Speed Mode

Press the travelling high-speed switch on the monitor.

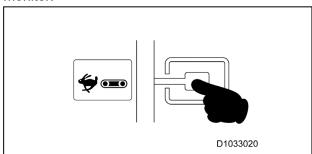

Fig. 4-80

· Yellow indication: High-speed travelling mode

· White indication: Low-speed travelling mode

DIRECTIONAL CONTROLS

WARNING!

- Sudden steering or unnecessary spin turns at high speed not only damages the rubber track and hydraulic devices, but also may result in collision with other objects.
- Spin turns must be performed at low speed with the acceleration pedal gently depressed.
- Do not change the path on the slope. The machine may slip to the side. Be especially careful on the soft ground and clay soil.
- The following operations should be performed with the acceleration pedal gently depressed.

Changing the Machine Direction While Being Stopped

Left Turn

Operate the right travelling lever.

Tilt the travelling lever forward to turn to the left in the forward direction.

Tilt the travelling lever toward you to turn to the left in the backward direction.

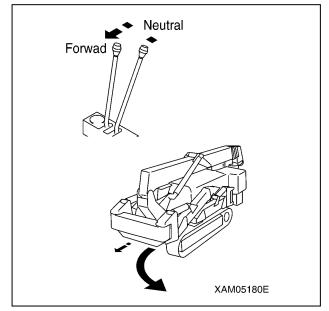

Fig. 4-81

4-34 12/2022 MC305CB-3

Right Turn

Operate the left travelling lever.

Tilt the left travelling lever forward to turn to the right in the forward direction.

Tilt the left travelling lever toward you to turn to the right in the backward direction.

Left Spin Turn

Tilt the right travelling lever forward while tilting the left travelling lever toward you to rotate the left and right rubber tracks in the opposite direction for left spin turn.

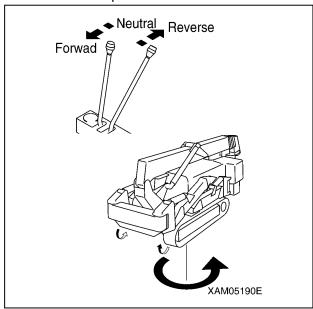

Fig. 4-82

Right Spin Turn

Tilt the left travelling lever forward while tilting the right travelling lever toward you to rotate the left and right rubber tracks in the opposite direction for right spin turn.

Changing Path While Travelling Forward/Backward

Left Turn While Travelling Forward

While tilting the right travelling lever forward, return only the left travelling lever to the "Neutral" position.

Left Turn While Travelling Backward

While tilting the right travelling lever toward you, return only the left travelling lever to the "Neutral" position.

Right Turn While Travelling Forward

While tilting the left travelling lever forward, return only the right travelling lever to the "Neutral" position.

Right Turn While Travelling Backward

While tilting the left travelling lever toward you, return only the right travelling lever to the "Neutral" position.

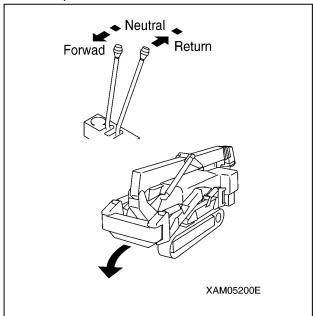

Fig. 4-83

STOPPING/PARKING MACHINE

WARNING!

- Avoid sudden stop and try to stop with margin whenever possible.
- Choose levelled and solid location for parking the machine.
 If you park on the slope by necessity, provide some break so that the machine will not move.

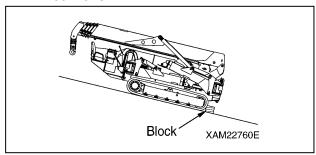

Fig. 4-84

- Careless contact with the travelling lever(s) during machine start-up may result in sudden movement of the machine, leading to serious accidents.
 Always set the travelling lock lever to the "LOCK" position when parking the machine.
- When leaving the machine, be sure to turn the starter switch to the "OFF" position and carry the key with you.

 Operate the left and right travelling levers to the "Neutral" position at the same time. This automatically brakes the machine and the machine stops.

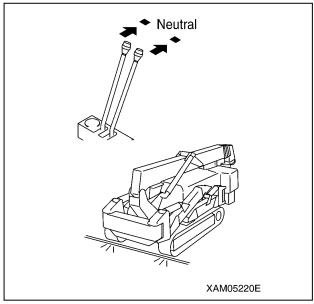

Fig. 4-85

2. Knock down the travelling lock lever (8) to the "LOCK" position.

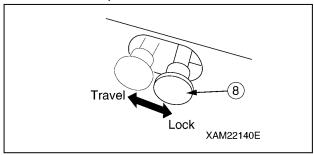

Fig. 4-86

4-36 12/2022 MC305CB-3

DESCRIPTION ON OUTRIGGER AND CRANE SAFETY DEVICES

Functions of Outrigger Safety Device

The outrigger safety devices have the interlock functions shown in the table below.

	Interlock Function	Description of Interlock Function	
1	Outrigger Interlock	The outrigger is not enabled if the position pin is not inserted properly by rotating the outrigger rotary to extension side (outward) with the boom being stowed (boom lowered to maximum, slewed and stored). • Whether the boom is lowered to the maximum is verified by the detection switch located to the post. • Install a protrusion on the post at the boom slew and stow position and a detector switch on the travelling dolly in order to detect whether the boom has stopped at the slew and stow position.	
2	Crane Interlock	The crane operation (telescoping, raising/lowering hook, boom derricking, and slewing) is enabled only when all the four outriggers are extended and set (overhung and grounded). The outrigger extension status is detected as follows. Install a detection switch at the position pin section of the outrigger rotary to detect the insertion of the position pin into the extension position. Install a detection switch inside the outrigger inner box to detect if the tray is seated properly through the detection pin installed between the tip of the inner box and the tray.	

CAUTION:

- Set the outriggers in the extension status and operate the work selector switch in the
 outrigger operation panel to the "Crane" position to enable the crane operation.
 When the detection condition for setting one of the four outriggers (see the item 2 in the table
 above) is no more fulfilled, the working status lamp (red) lights up, and outrigger un-set
 warning lamp (yellow) flashes.
 - If this state remains for 3 seconds or more, the crane interlock function is activated and the crane operation will be disabled.
- Stow the crane and operate the work selector switch on the outrigger operation panel to the "Outrigger" position to enable the outrigger setting and extension operations.
- If the crane operation is not enabled after operating the work selector switch on the outrigger operation panel to the "Crane" position even after the outrigger is being extended and set, there may be faulty adjustment or failure in the outrigger safety device.
 Contact us or our sales service agency.
- If outrigger setting or stowage operation is not enabled after operating the work selector switch on the outrigger operation panel to the "Outrigger" position even after the outrigger is being extended and set, there may be faulty adjustment or failure in the outrigger safety device.

Contact us or our sales service agency.

WARNING! Understand well the operation sequence below, warning display from the safety devices under the corresponding machine conditions, and the details of operation stop. Keep these in mind for safe operations.

The table below shows what kind of "display and warning" will be issued and the resulting action of the safety devices when this machine is used in the standard condition.

The standard operation sequence shown here is as follows.

[1] Check before setting outriggers \Rightarrow [2] Outrigger setting operation \Rightarrow [3] Crane operation \Rightarrow [4] Crane stowing operation \Rightarrow [5] Outrigger stowing operation \Rightarrow [6] Machine travelling operation

The columns of the table below are described below.

Standard Operation Sequence, Machine Status	Display and Warning	Activation of Safety Devices
This field shows the standard operation sequence and the operation position of operation levers and switches, and machine status.	This field shows the "display" and "warning" issued as a result of the operation.	This field shows the name of the safety device that prevents the resulted error and its action.

Check before Setting Outriggers

Standard Operation Sequence, Machine Status	Display and Warning	Activation of Safety Devices
Travelling lock lever at TLOCK" position		
Check if the machine is in the posture of stowing the boom • Fully retract the boom • Boom horizontal stowing position • Boom slewing stowing position	Boom stowing lamp on display panel ON [Outrigger un-set warning lamp flashes] [Working status lamp (red) ON]	Outrigger interlock device • All the outrigger operations stop if the boom stowing lamp does not light up.

Outrigger Setting Operation

Standard Operation Sequence, Machine Status	Display and Warning	Activation of Safety Devices
Set the outriggers. 1. Extend the outriggers. Rotate the outrigger rotary and secure them at the specified position with the position pin Work selector switch "Outrigger" Outrigger extension switches "OUT"	Extension lamps on display panel ON [Outrigger un-set warning lamp flashes] [Working status lamp (red) ON]	
2. Set the outriggers.Outrigger grounding switch "OUT"Check the level with the level.	Setting lamps on display panel ON [Outrigger un-set warning lamp OFF] [Working status lamp (red) OFF]	
When the machine tilts for 3 degrees or more during outrigger setting operation	Warning buzzer sounds continuously	Crane inclination alarm device is activated

4-38 12/2022 MC305CB-3

Crane Operation

Standard Operation Sequence, Machine Status	Display and Warning	Activation of Safety Devices
Perform crane operations. • Work selector switch "Crane" • Crane operation with levers	 Boom stowing lamp on display panel OFF Actual work and the rated total load are compared, and the working status lamp up according to the load factor. Load factor for illuminating working status lamp Load factor less than 90 %: Working status lamp (green) ON Load factor 90 to less than 100 %: Working status lamp (yellow) ON, alarm sounds intermittently. Load factor 100 % or more: Working status lamp (red) ON, alarm sounds continuously. 	Moment limiter • When the load factor reaches 100 % or more (overloaded), hook raising, boom extending, and boom lowering operation stop.
When one of the outriggers go up in the air during crane operation	Setting lamps (red) on display panel flash	Crane interlock device If any of the extension lamps and setting lamps (total of eight) goes off, hook raising, boom extending, and boom lowering operation stop.
When the hook was raised excessively	Alarm buzzer sounds continuously	Over winding detector is activated. Hook raising operation stops.
When the hook was lowered Excessively	Alarm buzzer sounds continuously	Over winding detector is activated. Hook raising operation stops. Cable warning is activated. Hook lowering operation stops.
When the machine tilts for 3 degrees or more during crane operation	Alarm buzzer sounds continuously	Crane inclination alarm device is activated

Crane Stowing Operation

Standard Operation Sequence, Machine Status	Display and Warning	Activation of Safety Devices
Operate the machine to take the boom stowing posture. • Fully retract the boom • Boom horizontal stowing position • Boom slew and stow position	Boom stowing lamp on display panel ON	Outrigger interlock device If the boom stowing lamp (green) does not light up, all the outrigger operations stop.

Outrigger Stowing Operation

Standard Operation Sequence, Machine Status	Display and Warning	Activation of Safety Devices
Stow the outriggers. 1. Set and stow the outriggers. Work selector switch "Outrigger" Outrigger grounding switch "ON"	Setting lamps (red) on display panel flash [Outrigger un-set warning lamp flashes] [Working status lamp (red) ON]	Crane interlock device • If any of the extension lamps
 2. Extend and stow the outriggers. Outrigger extension switch "ON" Rotate (Stow) the outrigger rotary and secure at the specified position with position pin. 	Extension lamps (red) on display panel flash [Outrigger un-set warning lamp flashes] [Working status lamp (red) ON]	and setting lamps (total of eight) goes off, all the crane operations stop.
When the machine tilts for 3 degrees or more during outrigger stowing operation	Warning buzzer sounds continuously	Crane inclination alarm device is activated

Machine Travelling Operation

g - porano:		
Standard Operation Sequence, Machine Status	Display and Warning	Activation of Safety Devices
Travel the machine. • Travelling lock lever at "Travel" position • Acceleration pedal input		
When the machine tilts for 15 degrees or more during travelling operation	Warning buzzer sounds continuously	Crane inclination alarm device is activated

4-40 12/2022 MC305CB-3

OUTRIGGER COMPONENTS

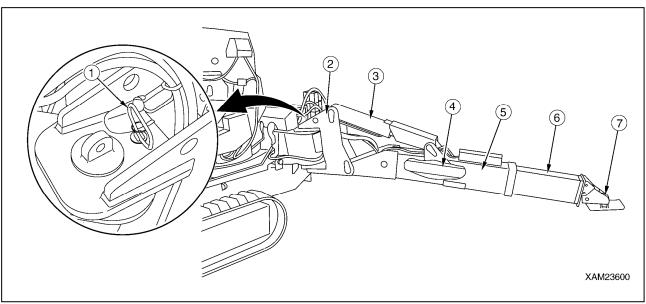

Fig. 4-87

- 1 Position pin
- 2 Rotary
- 3 Outrigger setting cylinder
- 4 Outrigger extension cylinder

- 5 Outer box
- 6 Inner box
- 7 Rigor adapter

OUTRIGGER DISPLAY

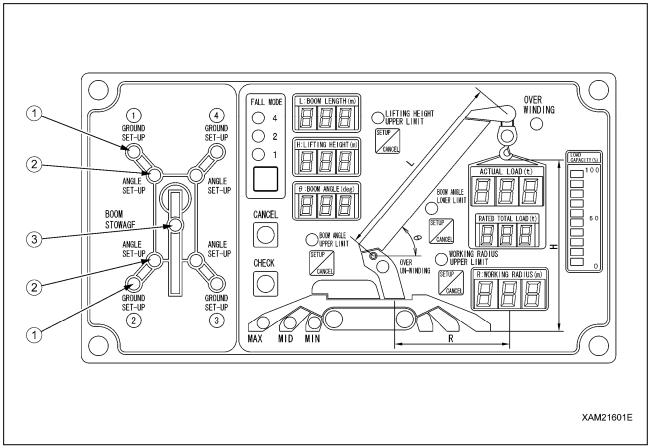

Fig. 4-88

- 1 Outrigger grounding lamp
- 2 Outrigger extension lamp

Outrigger Grounding Lamps

The lamp turns on to indicate that the outrigger is set.

Turns on when the outrigger tray (3) is set, and turns off when the tray (3) floats (stow).

The conditions of the outrigger tray (3) are detected by the detection pin (1) at the tip of the inner box (2) and by the detection switch inside the inner box.

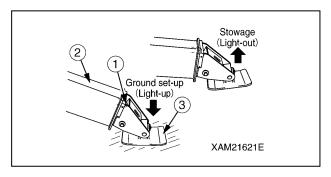

Fig. 4-89

3 - Boom stowing lamp

Outrigger Extension Lamps

The lamp turns on to indicate that the outrigger is extended.

Turns on when the position pin (2) is inserted (extension), and turns off when extracted (stow). The extraction/insertion of the position pin (2) is detected by the detection switch (1) of the outrigger rotary.

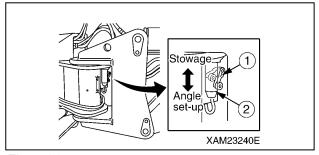

Fig. 4-90

4-42 12/2022 MC305CB-3

Boom Stowing Lamps

This lamp turns on and indicates that the boom is stowed.

The boom stowing lamp turns on and off in accordance to the following two types of detection switches. (When both of the detection switches detect.)

Boom Stowing Detection in Slewing Direction

The lamp turns on when the boom stops at the slew and stow position, and turns off when the boom leaves the slew and stop position.

Boom movements are detected by the projection (2) (slew) on the post and the detection switch (1) (fix) on the travelling dolly.

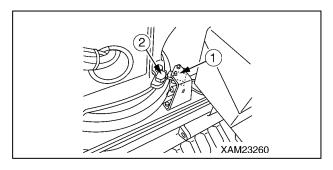

Fig. 4-91

Boom Stowing Detection in Horizontal Direction

The lamp turns on when the boom stops at the horizontal stowing position, and turns off when the boom leaves the horizontal stowing position. Boom movements are detected by the projection (4) (movable) at the side of the boom rear edge and the detection switch (3) (fixed) at the boom connection.

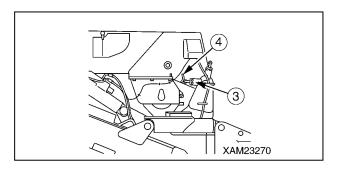

Fig. 4-92

OUTRIGGER UN-SET WARNING LAMP (YELLOW)

This lamp flashes to indicate that one or more of the four outriggers are not properly set.

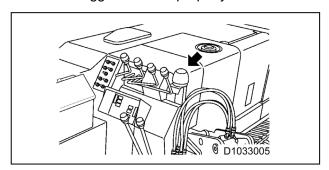

Fig. 4-93

NOTICE:

- The outrigger un-set warning lamp flashes if extension or setting of any of the four outriggers cannot be detected.
- The outrigger un-set warning lamp is interlocked with the working status lamp (red) for moment limiter. As soon as the outrigger unset warning lamp flashes, the working status lamp (red) also lights up.

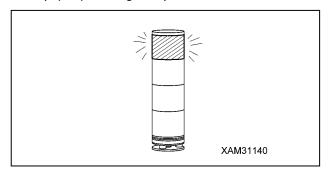

Fig. 4-94

- 6 Outrigger 1 extension switch
- 7 Outrigger 2 extension switch
- 8 Outrigger 3 extension switch
- 9 Outrigger 4 extension switch

Work Selector Switch (Travel, Outrigger, Crane)

WARNING!

 When operating the work selector switch to the "Travel" position, be sure to stow the crane and put the machine in the "travelling posture". Driving the machine not in the "travelling posture" can overturn the machine, resulting in serious accidents.

- Be sure to operate the travelling lock lever to the "LOCK" position before outrigger or crane operation.
- Note that if the travelling lock lever is not at the "LOCK" position, you can still travel the machine even if the work selector switch is operated to the "Outrigger" or "Crane" position. The machine may move, causing serious accidents.
- Be sure to set all the outriggers when turning the work selector switch to the "Crane" position to perform the crane operation. Inappropriate setting of outriggers will prevent the crane operation because of the outrigger safety device function.
- Always stow the boom when performing the outrigger operation with the work selector switch set to the "Outrigger" position. If the boom is not stowed properly, the outrigger safety device function prevents the outrigger operation from being performed.

Use this switch to switch the work state of the machine (Travel, Outrigger, Crane).

• Travel: Push down the switch to the left.

Now you can travel the machine.

• Outrigger: Push down the switch to the centre

position. Now you can perform the

outrigger operation.

• Crane: Push down the switch to the right.

Now you can perform the crane

operation.

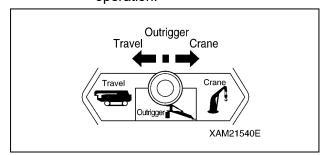

Fig. 4-96

4-44 12/2022 MC305CB-3

NOTICE: The table below shows the relation between the operation position of the work selector switch and permitted operations.

- Only the travelling operation is active when the work selector switch is at the "Travel" position.
- When the work selector switch is at the "Outrigger" position, all the devices in the table below are active.
- Be sure to set the travelling lock lever to the "LOCK" position and stow the crane when operating the outriggers. Be careful not to touch the operation levers of the crane.
- When the work selector switch is at the "Crane" position, all the devices except for outrigger operation in the table below are active.
- Be sure to set the travelling lock lever to the "LOCK" position and set all the outriggers when operating the crane.

Work Selector Switch Operation Position	Crane System (A: Active N: Not active)					
	Travelling Operation	Outrigger Operation	Crane Operation	Remote Control System		Moment Limiters
				Crane	Outrigger	
Travel	Α	N	N	N	N	N
Outrigger	N (Note 1)	Α	N	Ν	Α	Α
Crane	N (Note 1)	N	Α	Α	A (Note 2)	Α

Note 1: Operating the travelling lock lever to the "LOCK" side restricts the travelling operation.

If the lever is not operated to the "LOCK" side, the machine travels when a travelling lever is operated.

Note 2: The outrigger operation is enabled only when the transmitter of the Remote Control System is in the "OUTRIGGER mode".

Outrigger Grounding Switches

Use these switches to set or stow the outriggers. There are four outriggers ((1) to (4)). Each outrigger can be operated independently or all together.

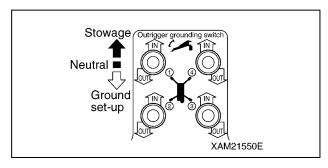

Fig. 4-97

- IN: Push down the switch upward. The outrigger setting cylinder retracts and you can stow the outrigger.
- Neutral: Release your finger from the switch.
 The switch returns to the "Neutral" position and the outrigger setting cylinder stops telescoping.
- OUT: Push down the switch downward. The outrigger setting cylinder extends and you can set the outrigger.

Outrigger Extension Switch

Use these switches to extend or stow the outriggers.

There are four outriggers ((1) to (4)). Each outrigger can be operated independently or all together.

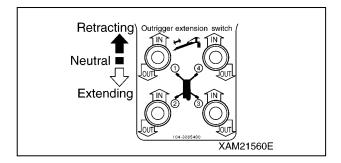

Fig. 4-98

- IN: Push down the switch upward. The outrigger extension cylinder retracts and you can stow the outrigger inner box.
- Neutral: Release your finger from the switch.
 The switch returns to the "Neutral" position and the outrigger extension cylinder stops telescoping.
- OUT: Push down the switch downward. The outrigger extension cylinder extends and you can extend the outrigger.

OUTRIGGER SETTING

Outrigger Setting Precautions

Selecting Location to Set Outriggers

- When setting the outriggers on the structural objects such as construction site or concrete floor, verify in advance that the surface where the outriggers will be set has sufficient strength. Insufficient strength in the setting surface will result in overturning or fall of machine due to collapse of the setting surface.
- Setting the outriggers on the soft ground as given below will cause the tray of the outriggers to sink in the ground, leading to the overturning of the machine.
 - Road surface with low-cost pavement (lowcost asphalt or thin concrete)
 - · Surface with paving stones.
 - Area reclaimed after excavation work
 - Landfill
 - Road shoulders or area close to hole such as excavation work
 - Deteriorated pavement surface
 - Areas where under the pavement surface is hollow due to water erosion and the top soil appears to be hard but soft in the ground.

Protecting Ground

- Place a sole plate of sufficient size with sufficient strength under the tray of all the outriggers on the soft ground to protect the ground.
- If you have to set the outriggers near the road shoulder by necessity, take secure action to prevent the collapse of the road shoulder.
- When working on the slope, level the tray of all the outriggers and the ground under the rubber tracks before setting the outriggers.
 Setting the outriggers with the tilted ground surface without levelling the ground surface will cause the outriggers to slip or overturn, causing serious accidents.
- If the ground is not protected or if the outriggers may sink even after protecting the ground, do not perform the crane operations.

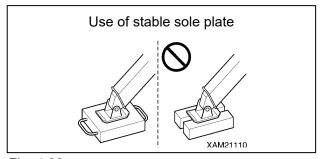

Fig. 4-99

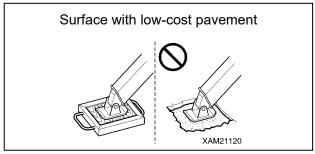

Fig. 4-100

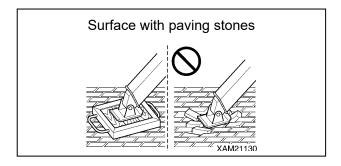

Fig. 4-101

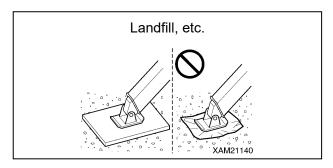

Fig. 4-102

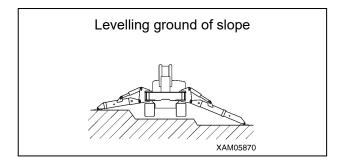

Fig. 4-103

4-46 12/2022 MC305CB-3

Cautions When Placing Outrigger

Always observe followings to prevent serious injuries and death accidents when placing the outriggers.

When placing the outriggers, ALWAYS keep
the Machine sternly level while looking at the
level gauge. Occasionally view the level gauge
and make sure to keep the Machine level
during the crane works as well. Performing the
crane operation with the body tilted will cause
overturning.

This device indicates how much the machine body is tilted.

The bubble position shows how much the machine is tilted in which direction.

Use this device to verify that the machine is levelled when setting the outriggers.

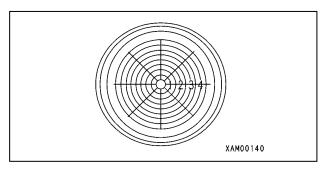

Fig. 4-104

 Place the outriggers at a maximum extension condition as the basic rule.
 In case of placing in a non-maximum extension condition for unavoidable reason, ALWAYS find the values outrigger middle extension or outrigger minimum extension values in the rated total load chart before work.

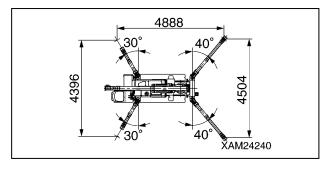

Fig. 4-105

 Place the outriggers in a style that the rubber tracks are approximately 50 mm above the ground.

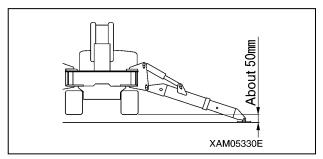

Fig. 4-106

- Make sure all of the outrigger position pins are securely fixed.
- Do NOT let people approach nearby when placing the outriggers.
 Otherwise, serious accidents for instance the outrigger support catching a foot may occur.
- Verify that the Moment Limiter Override Switch is at the "OFF" position.
- Do NOT attempt any outrigger operation with the moment limiter override switch ON.
- The moment limiter override switch should be set to "ON" only when the moment limiter is faulty or for crane inspection and maintenance work.

If the Moment Limiter Override Switch is "ON", an alarm buzzer will sound intermittently.

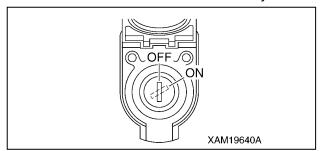

Fig. 4-107

Ground for Setting Outriggers

Always set the outriggers to the level, safe and solid ground.

Performing the crane operation without setting the outriggers can contribute to the overturning of the machine.

Outrigger Safety Device

Always set the moment limiter override switch to the "OFF" position when operating the outriggers. Do not operate the outriggers with the moment limiter override switch at the "ON" position.

Set the moment limiter override switch to the "ON" position only when performing the inspection and maintenance.

Extending and Grounding the Outriggers

- Keep people away from the machine when setting the outriggers.
 Staying around the machine may cause serious accidents such as getting caught between an outrigger and the machine main unit.
- Work must always be performed with the starter switch turned to the "OFF" position and the machine stopped except when extending or grounding the outrigger cylinders. There is a risk of serious accident if the outrigger switches are touched by another person and the outriggers suddenly move.
- Always monitor the level to level the machine when setting the outriggers.
 When the machine tilts for "3 degrees" or more, the overturning alarm buzzer sounds.
- Set the outriggers so that the rubber tracks are about 50 mm above the ground.
 After setting the outriggers, verify that all the four outriggers are securely set.
- The outriggers of this machine can be set flexibly according to the terrain. However, if the outriggers cannot be set in the "outrigger maximum extension" state, perform the crane operation with the values given in the "Rated total load chart with outrigger medium extension" and "Rated total load chart with outrigger minimum extension" in the rated total load chart.
- When extending and grounding the outriggers, always maintain the outrigger rotary at the extension position, and insert the position pin to the end. Do not set the outriggers with the outrigger rotary stowed.
- There are four outriggers. Be careful not to mistake 8 outrigger switches for the others.
 Check the numbers shown on the "operation plate" at the switch section and the location of the "number plate" affixed to the outriggers.
 Wrong operation can lead to serious accidents.
- When operating two outrigger grounding switches at the same time, choose two front switches (outrigger (1) and (4)) or two rear switches (outrigger (2) and (3)). Operating two left or right switches at the same time will suddenly raise two outriggers on one side, causing overturning of the machine.

- When raising the machine, operate the four outrigger switches to raise them gradually and uniformly. Suddenly raising two outriggers on one side will overturn the machine.
- Do not operate the outrigger switches while the acceleration pedal is depressed.
 Operating the switches with the acceleration pedal depressed may cause the outriggers to move suddenly, resulting in serious accidents such as the machine toppling.
- Do not extend the outriggers with the outriggers set. Doing so applies unreasonable force on the outriggers, resulting in the outrigger breakage.
- Always set the travelling lock lever to the "LOCK" position when operating the outriggers.

CAUTION:

- Always keep the boom at the "fully retracted, lowest position and slew and store position" when operating the outriggers.
 The outriggers cannot be operated if the boom is not stowed completely. (Verify that the boom stowing lamp (green) on the outrigger display is ON.)
- After extending the outriggers, verify that the outriggers are securely set.
- If all the outriggers are not securely set, the crane operations will not be enabled. (Verify that all of the extension lamps and setting lamps (green) of the outrigger display are lit.)

WARNING!

- Make sure all the outriggers are placed properly before performing crane operation.
- This machine features a safety-interlock system that prevents crane operation unless all the lamps, other than the boom stowing lamp on the outrigger monitor, are on.
- Always place the machine in a horizontal position with the use of the level when extending the outriggers. A warning buzzer sounds when the machine is inclined 3° or more and stops when the machine is placed in a horizontal position.

4-48 12/2022 MC305CB-3

- When the crane is used with the outriggers extended other than at the maximum, crane operation should proceed with respect to the values specified in the rated total load chart corresponding to "MIN./MID.
 OUTRIGGER POSITION".
- Failure to perform crane operation with proper values may cause the machine to topple over. Exercise caution when performing operation.
- Despite the maximum extension of all the outriggers, the width of extended outriggers decreases due to an ungraded ground even when clearance "a" in the figure is 50 mm.
 Crane operation should proceed with respect to the values specified in "MID.
 OUTRIGGER POSITION" in the rated total load chart.

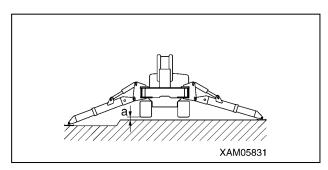

Fig. 4-108

 Despite the medium extension of all the outriggers, the width of extended outriggers decreases due to an ungraded ground even when clearance "a" in the figure is 50 mm.
 Crane operation should proceed with respect to the values specified in "MIN.
 OUTRIGGER POSITION" in the rated total load chart.

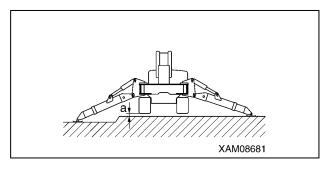

Fig. 4-109

 Crane operation with the outriggers extended at the minimum is permitted only if the outriggers are placed on a level surface. 50 mm of dimension between the outrigger bottom and crawler bottom should be obtained. On ungraded ground or similar, the width of extended outriggers decreases even when clearance "a" in the figure is 50 mm. Do not perform crane operation under such extension condition. Potential overturning of the machine may occur that leads to serious personal injury if disregarded.

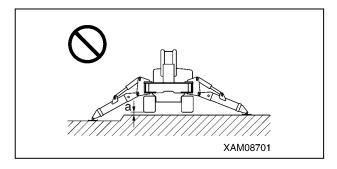

Fig. 4-110

 The machine becomes unsteady at some point if it undergoes a 360-degree slewing with an object hoisted. Irrespective of the rated total load, ensure operation in a short working radius and at low speed.

Outrigger Setting

There are four outriggers installed to the machine. Although the setting method is described for just one outrigger (outrigger (4)), set the other three outriggers in the same way.

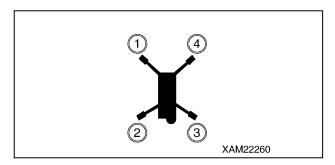

Fig. 4-111

1. Operate the travelling lock lever (8) to the "LOCK" position.

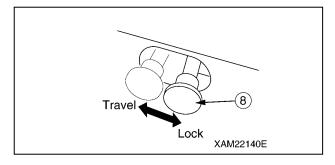

Fig. 4-112

2. Pull the position pin (1) out of the rotary (2) and rotate the rotary outward.

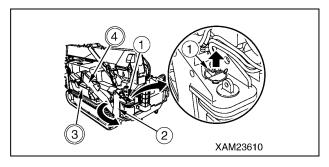

Fig. 4-113

 Insert the position pin (1) to the end at the position where the pin holes are aligned after rotating the rotary (2) outward.

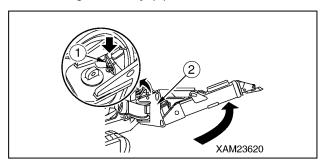

Fig. 4-114

NOTICE: The position pin (1) has a wire to prevent the loss of the pin.

4. Perform the same preparatory task to the other three outriggers.

NOTICE: After completing the preparatory task, verify that the position pin (1) is securely inserted.

5. Turn the starter switch to the "ON" position.

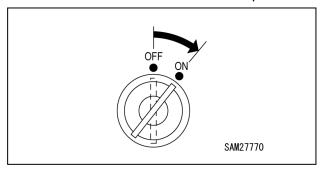

Fig. 4-115

Operate the work selector switch on the outrigger operation panel to the "Outrigger" position.

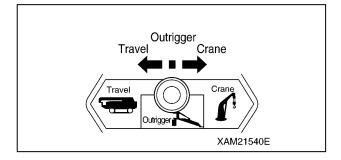

Fig. 4-116

7. Verify that the boom stowing lamp (1) (green) on the outrigger display is ON.

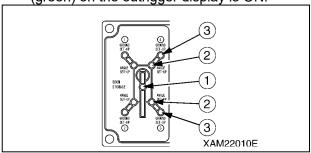

Fig. 4-117

8. Verify that the four outrigger extension lamps (2) (green) on the outrigger display are ON.

NOTICE: The boom stowing lamp (1) and four outrigger extension lamps (2) on the outrigger display are ON.

Check the number on the operation plate at the switches on the outrigger operation panel to determine which outrigger to be operated.

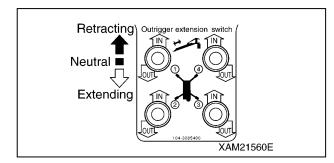

Fig. 4-118

 Push down an outrigger extension switch or two of them at the same time to the "OUT" side.

When the outrigger extension cylinder extends and the inner box extends to the desired position, set the switch to the "Neutral" position.

Operate the remaining switches in the same way and extend the inner box of the four outriggers to the desired position. Set the switch to the "Neutral" position.

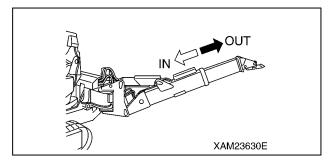

Fig. 4-119

 Push down an outrigger grounding switch or two of them at the same time to the "OUT" (downward) side.

When the setting cylinder extends and the tray is set, set the switch to the "Neutral" position.

Operate the remaining switches in the same way and set the tray of all the four outriggers. Set the switch to the "Neutral" position.

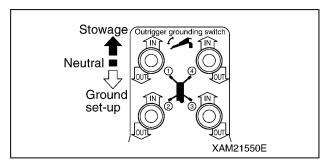

Fig. 4-120

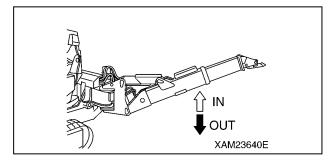

Fig. 4-121

WARNING!

- The overturning alarm buzzer sounds if the machine tilts for "3 degrees" or more when setting the outriggers. Operate the outrigger switches and adjust the machine to be levelled in which state the alarm buzzer will not sound.
- When operating two outrigger grounding switches at the same time, choose two front switches (outrigger (1) and (4)) or two rear switches (outrigger (2) and (3)). Operating two left or right switches at the same time will suddenly raise two outriggers on one side, causing overturning of the machine.
- After all the trays were set, push down an outrigger grounding switch or two of them at the same time to the "OUT" (downward) position.

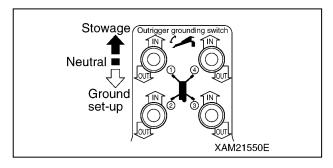

Fig. 4-122

When the setting cylinder extends and the machine is slightly raised, set the switch to the "Neutral" position.

Operate the remaining switches in the same way so that the four outriggers are raised to the same height. Set the switch to the "Neutral" position.

Repeat this operation to gradually raise the machine until the rubber tracks will be at the height of about 50 mm above the ground.

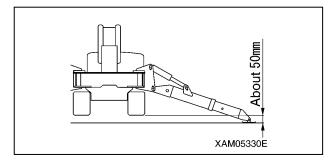

Fig. 4-123

13. When the machine was raised to about 50 mm above the ground, operate the outrigger operation switches while checking the position of the bubble in the level to adjust the machine to be levelled.

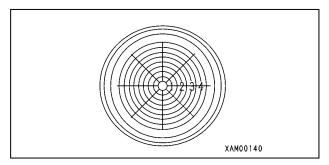

Fig. 4-124

- 14. After setting the outriggers, operate all the outrigger operation switches to the "Neutral" position.
- 15. Verify that the four outrigger grounding lamps (3) (green) on the outrigger display are ON.

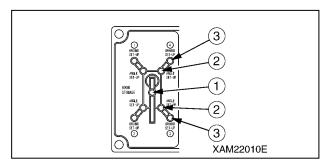

Fig. 4-125

NOTICE: On the outrigger display, all the boom stowing lamp (1), four outrigger extension lamps (2), and four outrigger grounding lamps (3) are illuminated in green.

CAUTION: If any of the grounding lamps (3) is flashing in red, remove the cover (7) of the outrigger tray (6) and check if there is any foreign object pinched in the bending section.

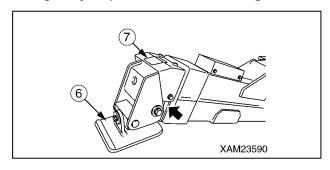

Fig. 4-126

Outrigger Extension Modes

Outrigger Maximum Extension

The figure shown at below represents the condition "When the crane is used with the outriggers extended at the maximum" in the rated total load chart.

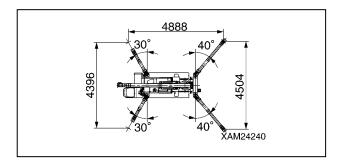

Fig. 4-127

Ensure that all the lamps, other than the boom stowing lamp on the outrigger monitor, are on. If the inner box is retracted even if only slightly, crane operation should proceed with respect to the values specified in the rated total load chart corresponding to "When the crane is used with the outriggers extended at the minimum/medium". See "OUTRIGGER SETTING" on page 4-46 for proper setting of the outriggers.

NOTICE: Outrigger maximum extension is defined as that:

- 1. The outrigger is set at the positioning pin position (40° front, 30° back).
- 2. The inner box of all the outriggers is extended fully.
- 3. All the outriggers are placed on a level surface.
- 4. Approx. 50mm is assured for clearance "a" (between the outrigger bottom and crawler bottom) in the figure at below.

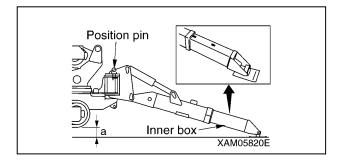

Fig. 4-128

4-52 12/2022 MC305CB-3

Outrigger Midium Extension

The figure shown at below represents the condition "When the crane is used with the outriggers extended at the medium" in the rated total load chart.

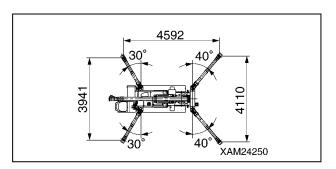

Fig. 4-129

NOTICE: Outrigger medium extension is defined as that:

- 1. The outrigger is set at the positioning pin position (40° front, 30° back).
- 2. The inner box of all the outriggers is extended at the medium.
- 3. All the outriggers are placed on a level surface.
- 4. Approx. 50mm is assured for clearance "a" (between the outrigger bottom and crawler bottom) in the figure at below.

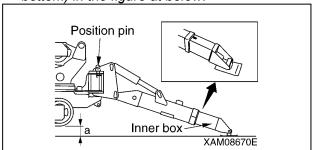

Fig. 4-130

NOTICE: If even a group of outriggers is retracted to a medium point, all the outriggers are deemed to be extended at the medium.

The figure shown at below represents the condition "When the crane is used with the outriggers extended at the minimum" in the rated total load chart.

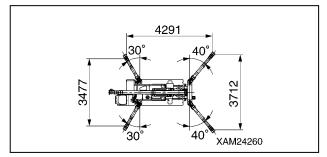

Fig. 4-131

NOTICE: Outrigger minimum extension is defined as that:

- 1. The outrigger is set at the positioning pin position (40° front, 30° back).
- 2. The inner box of all the outriggers is minimised.
- 3. All the outriggers are placed on a level surface.
- 4. Approx. 50mm is assured for clearance "a" (between the outrigger bottom and crawler bottom) in the figure at below.

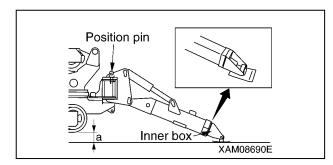

Fig. 4-132

NOTICE: If even a group of outriggers is retracted to the minimum point, all the outriggers are deemed to be extended at the minimum.

Outrigger Minimum Extension

OUTRIGGER STOWING

WARNING!

- Do not let people approach toward the machine when stowing the outriggers.
- Staying around the machine may result in serious accidents such as getting caught between an outrigger and the main unit of the machine.
- Verify that there is nothing under the rubber tracks when stowing the outriggers.
- If there is any object under the rubber tracks, the machine may overturn and serious accidents may occur when stowing the outriggers.
- Work must always be performed with the starter switch turned to the "OFF" position and the machine stopped except when extending or grounding the outrigger cylinders. There is a risk of serious accident if the outrigger switches are touched by another person and the outriggers suddenly move.
- When the position pin is removed, the outrigger loses the support and rotates.
 Always hold the outrigger with one hand when removing the position pin.
- Do not put your hands or fingers around the gaps of movable areas when stowing the outriggers.
 - Your hands or fingers may get caught, and it may lead to serious accidents.

- Insert the position pin to the end when stowing the outriggers.
- When lowering the raised machine, operate the eight outrigger switches so that the four outriggers are lowered little by little.
 Suddenly retracting two outriggers just on the right side or left side will cause instability in the machine and it can overturn the machine.
- Do not operate the outrigger switches while the acceleration pedal is depressed.
 Operating the switches with the acceleration pedal depressed may cause the outriggers to move suddenly, resulting in serious accidents such as the machine toppling.
- Do not perform the outrigger extending operation after they are set on the ground.
 Doing so applies unreasonable force on the outriggers, resulting in the outrigger breakage.
- Always set the travelling lock lever to the "LOCK" position when operating the outriggers.

CAUTION:

- Always keep the boom at the "lowest position and slew and stow position" when operating the outriggers. The outriggers cannot be operated if the boom is not stowed completely. (Verify that the boom stowing lamp (green) on the outrigger display is ON.)
- Operate the work selector switch on the outrigger operation panel to the "Outrigger" position.

4-54 12/2022 MC305CB-3

Although the stowing method is described for just one outrigger (outrigger (4)), stow the other three outriggers in the same way.

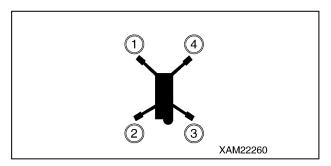

Fig. 4-133

1. Operate the travelling lock lever (8) to the "LOCK" position.

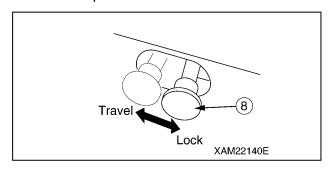

Fig. 4-134

Insert the key into the starter switch and turn the starter switch to the "ON" position.

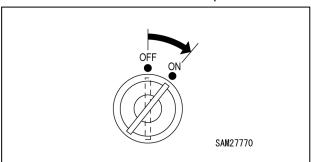

Fig. 4-135

Operate the work selector switch on the outrigger operation panel to the "Outrigger" position.

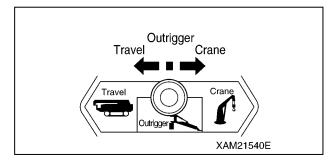

Fig. 4-136

4. Verify that the boom stowing lamp (1) (green) on the outrigger display is illuminated.

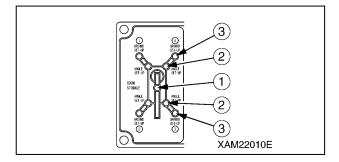

Fig. 4-137

WARNING! When operating two outrigger grounding switches at the same time, choose two front switches (outrigger (1) and (4)) or two rear switches (outrigger (2) and (3)). Operating two left or right switches at the same time will suddenly raise two outriggers on one side, causing overturning of the machine.

- Check the number on the operation plate at the switch section on the outrigger operation panel to determine which outrigger to be operated.
- Push down an outrigger grounding switch or two of them at the same time to the "ON" (upward) side.

When the outrigger setting cylinder retracts and the machine starts to go down, return the switch to the "Neutral" position.

Operate the remaining switches in the same way and lower all the four outriggers to the same height. Return the switch to the "Neutral" position.

Repeat this operation to gradually lower the machine until the rubber tracks go down completely on the ground.

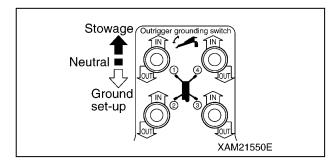

Fig. 4-138

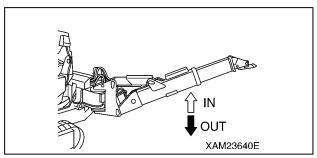

Fig. 4-139

- 7. When the left and right rubber tracks are completely set on the ground, push down again an outrigger grounding switch or two of them at the same time to the "IN" (upward) side.
 - When the setting cylinder completely retracts and the top box goes up to the upper limit, release your finger from the outrigger grounding switch.
- 8. Verify that the four outrigger grounding lamps (3) on the outrigger display are flashing in red.

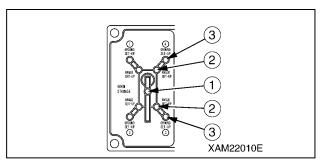

Fig. 4-140

NOTICE: On the outrigger display, the boom stowing lamp (1) (green) is illuminated and four outrigger extension lamps (2) and four outrigger grounding lamps (3) are flashing in red.

- Push down an outrigger extension switch or two of them at the same time to the "IN" (upward) side.
 - When the extension cylinder fully retracts and the inner box is at its shortest, return the switch to the "Neutral" position.
 - Operate the remaining switches in the same way and make the inner box of the four outriggers to their shortest. Return the switch to the "Neutral" position.

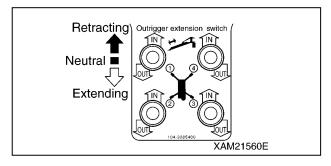

Fig. 4-141

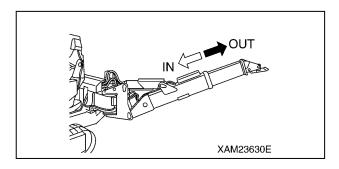

Fig. 4-142

10. Turn the starter switch to the "OFF" position.

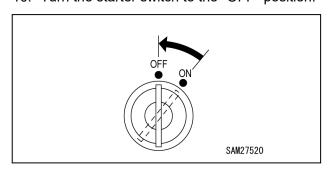

Fig. 4-143

4-56 12/2022 MC305CB-3

11. Pull the position pin (1) out of the rotary (2) and rotate the rotary inward.

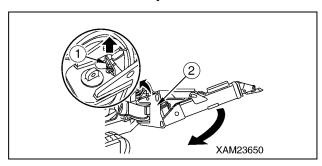

Fig. 4-144

12. Insert the position pin (1) to the end at the position where the pin holes are aligned after rotating the rotary (2) inward.

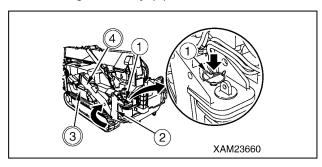

Fig. 4-145

NOTICE: The position pin (1) has a wire to prevent the loss of the pin.

13. Stow the other three outriggers in the same way.

NOTICE: After stowing the outriggers, verify that the position pin (1) is securely inserted.

- 14. Insert the key into the starter switch and turn the key to the "ON" position.
- 15. Verify that the four outrigger extension lamps(2) on the outrigger display went off.

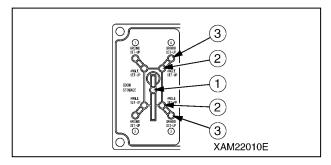

Fig. 4-146

NOTICE: On the outrigger display, the boom stowing lamp (1) (green) is illuminated and four outrigger extension lamps (2) and four outrigger grounding lamps (3) are flashing in red.

WORKING WITH CRANE

Inspection before Starting Work

WARNING! Check that the safety devices and crane operate properly.

- Operate each of the operation levers and switches under no load, and check that operations take place without abnormality.
- · Repair immediately if any abnormality exists.
- Check that the safety devices such as the moment limiter, outrigger safety device, and over winding detector / automatic stop device activate properly.

Cautions When Handling Moment Limiter

WARNING!

- Use/store the moment limiter under the following ranges of ambient temperature.
 ★Temperature of use: 30 to 60 °C
- Avoid direct sunlight so that the temperature of the moment limiter body does not exceed the above range.
- Avoid locations with strong acid or alkaline atmosphere as much as possible. Otherwise, unexpected failures may occur.
- Do NOT apply impact to the moment limiter body for instance by colliding with an object.
- Such attempt may damage the case and may result in failures and improper operations.
- Do NOT push the panel sheet of the moment limiter body by a force more than necessary or push with sharp object such as a tip of a screwdriver. Such act may damage the panel sheet and may result in failures and improper operations.
- Do NOT remove the case cover or panel sheet from, or disassemble the moment limiter body. Such act may damage case and/or panel sheet and may result in failures and improper operations.

Cautions When Setting Up Moment Limiter

WARNING!

- The moment limiter calculates the moments assuming the Machine is level.
- If you work with the crane when the Machine is not level, warnings and alarms are not issued even when the rated total load is near.
- ALWAYS set the outrigger horizontally to the ground while looking at the level gauge.
- Before using the moment limiter, check that the boom angle display, boom length display and real load display are displayed correctly following the crane movements.
 Attempt to use without correct display results in failure to obtain correct measurement result and may result in serious bodily accidents caused by reasons such as an improper operation and/or breakage of nearby equipment.
- ALWAYS make sure the wire strand setting
 of the moment limiter matches with the wire
 strand of the crane. If the wire strands do
 not match, ALWAYS let the wire strands
 match by changing the wire strand setting
 of the moment limiter or by changing the
 wire strand of the crane. Attempt to use with
 unmatched wire strands results in failure to
 obtain correct measurement result and may
 result in serious bodily accidents caused by
 reasons such as an improper operation
 and/or breakage of nearby equipment.
- Do NOT carelessly change the setting when measuring with the moment limiter. Such attempt results in failure to obtain correct measurement result and may result in serious bodily accidents caused by reasons such as an improper operation and/or breakage of nearby equipment.

4-58 12/2022 MC305CB-3

Place Crane on Level and Hard Soil

WARNING!

- ALWAYS place the outriggers on a level, stable and solid ground.
- Attempt to work with crane without outriggers firmly contacting the ground may cause the Machine to trip.
- ALWAYS place all outriggers before working with crane.
- Do NOT set any outrigger near the location that may collapse, for instance a soft ground, roadside or drilled hole.
- In case the outriggers need to be placed on a soft ground for unavoidable reason, ALWAYS reinforce the ground by laying a sufficiently large and strong base plate below each of all outrigger supports.

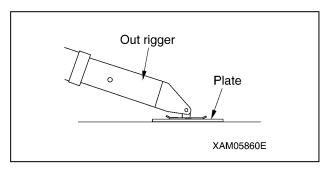

Fig. 4-147

CRANE OPERATION

Dos and Don'ts During Crane Operations

WARNING!

- Always set the outriggers on the levelled solid ground when performing the crane operations.
- Never perform travelling hoist or the crane operations without setting the outriggers.
- The machine will be unstable and overturn, leading to serious accidents.
- See the cautions given in the Safety besides the dos and don'ts in this section.

Do Not Operate with Slewing Force

Drawing in or lifting the load with slewing operation is prohibited.

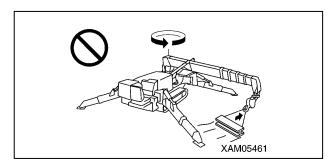

Fig. 4-148

Do Not Operate with Derricking Force

Drawing in or lifting the load with boom derricking operation is prohibited.

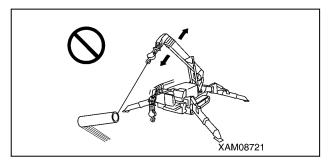

Fig. 4-149

Do Not Pull Sideward, Draw in, and Hoist Diagonally

Pulling sideward, drawing in, or hoisting diagonally applies unreasonable force on the machine. It not only damages the machine body, but also is dangerous. Never operate in these ways.

The hook must come right above the centre of gravity of the load hoisted.

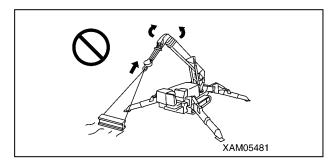

Fig. 4-150

Do Not Operate Violently

Do not operate the lever suddenly.

Especially, the "slewing", "boom lowering", and "hook lowering" must be operated at low speed.

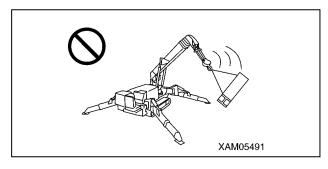

Fig. 4-151

Do Not Access into Working Radius

Do not let people access into the working radius such as permitting an operator to go under the hoisted load.

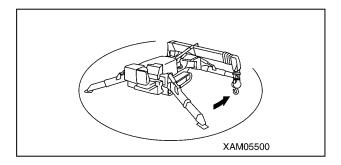

Fig. 4-152

Do Not Use for Other than Main Applications

Do not move people up/down with the crane.

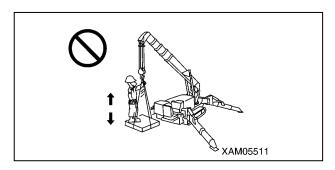

Fig. 4-153

Do Not Perform Unreasonable Operations

Operations requiring more than the machine performance can cause accidents.

Particularly, the crane operations must be carried out according to the rated total load chart.

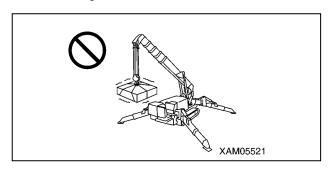

Fig. 4-154

4-60 12/2022 MC305CB-3

Do Not Wind by Force

Be careful not to hook the wire cable over a tree or steel beam while working.

If it gets stuck with something, do not force to wind the wire. Untangle and then wind the wire.

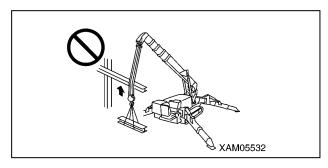

Fig. 4-155

Do Not Operate During Pick & Carry

The load may slew or the machine may overturn during the pick & carry.

Do not perform slewing operation or crane operations.

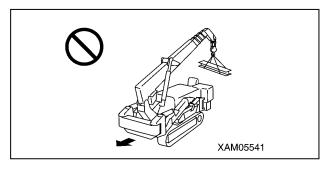

Fig. 4-156

Before Crane Operations

CAUTION:

- Verify that all the lamps on the outrigger display are illuminated in green before performing the crane operation. The crane cannot be operated if any of the four outrigger extension lamps and four outrigger grounding lamps is flashing in red.
- Set the travelling lock lever to the "LOCK" position when operating the operation levers of the crane system and outrigger switches.
- When loosening the stowing of the hook block, be careful not to topple the entire hook block sideways on the ground by loosening the wire cable too much. This will cause irregular winding on the winch drum.
- When loosening the stowing of the hook block, the hook block may slew and interfere with the peripheral devices, resulting breakage of the devices. Pay sufficient attention around the hook block.

Perform the following operations before crane operation.

1. Operate the travelling lock lever (8) to the "LOCK" position.

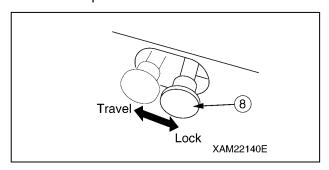

Fig. 4-157

Operate the work selector switch on the outrigger operation panel to the "Crane" position.

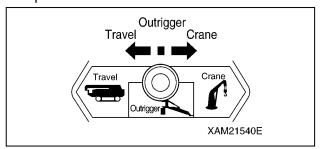

Fig. 4-158

 Operate the winch lever (3) to the "DOWN" (push forward) side to loosen the hook block from the stowing position.

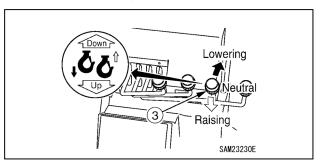

Fig. 4-159

 Verify that the moment limiter override switch, boom stowing switch, and hook stowing switch are OFF.

If these switches are at "ON" position, the operations will not stop.

NOTICE: If the Moment Limiter Override Switch is "ON", an alarm buzzer will sound intermittently.

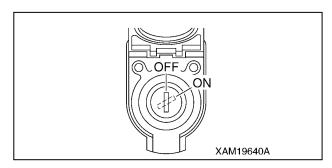

Fig. 4-160

 Over hoisting the hook block will activate the alarm buzzer of the over winding detector and the operation stops.

When the alarm buzzer sounds, release your hand immediately from the winch lever (3) to the "Neutral" position to stop raising the hook. Then, operate the winch lever (3) to "DOWN" (push forward) side to lower the hook block.

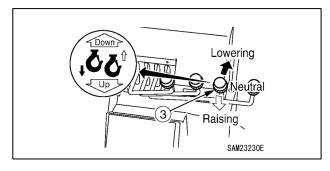

Fig. 4-161

 Extending the boom will hoist the hook block, activating the alarm buzzer of the over winding detector and the operation stops.

When the alarm buzzer sounds, release your hand immediately from the boom telescoping lever (2) to the "Neutral" position to stop extending the boom.

Then, operate the boom telescoping lever (2) to "RETRACT" (pull toward you) side to retract the boom.

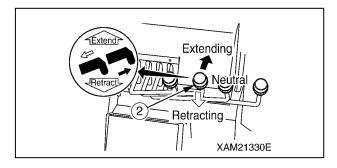

Fig. 4-162

 Use the horn switch to honk the horn to notify the people around of the danger during the crane operation.

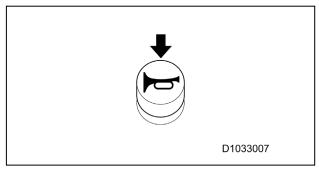

Fig. 4-163

- Verify that all the outriggers are extended and set.
- If any of the four outrigger extension lamps (2) or four outrigger setting lamps (3) is flashing in red, the crane cannot be operated.

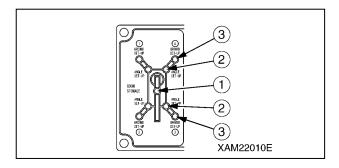

Fig. 4-164

Crane Operation Posture

Take the crane operation posture by following the procedure below when switching to the operation from the state described in "Before Crane Operations" on page 4-61.

 Operate the winch lever (3) to the "DOWN" (push forward) side and lower the hook but not to let the hook block touch the ground.

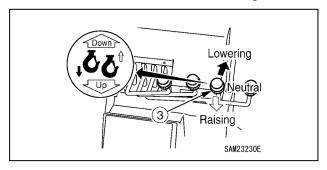

Fig. 4-165

2. Operate the boom derricking lever (4) to the "RAISE" (pull toward you) side and raise the boom to the angle where the hook block is not over hoisted and not touching the ground.

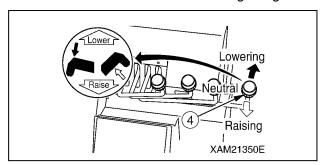

Fig. 4-166

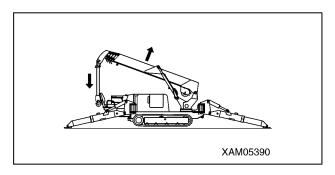

Fig. 4-167

Hook Raising/Lowering Operation

WARNING!

- With the boom deflection, the hoisted load slightly shifts forward. Notify the workers around such as slinging operators.
- If the hook block was hoisted too much, the over hoisting will be detected. The alarm buzzer sounds and the audible message saying "Hook over hoisted" will be heard. When the alarm buzzer and audible voice were heard, operate the winch lever immediately to the "Neutral" position and stop raising the hook.
- When lowering the hook for long distance for underground works, be sure to leave more than three turns of the wire cable on the winch drum.

CAUTION: Do not let the hook block touch the ground.

The winch drum will wind irregularly, damaging the wire cable.

Operate the winch lever (3) as follows;

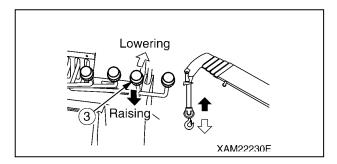

Fig. 4-168

Lower: Push the lever forward "DOWN".

Neutral: Release your hand from the lever.
 The lever will return to the "Neutral" position and the raising/lowering of the hook block stops.

• Raise: Pull the lever to the "UP" side toward you.

NOTICE: Adjust the winch raising/lowering speed using the stroke of the acceleration pedal and lever operation.

Boom Derricking Operation

WARNING!

- Operate the boom derricking lever as slowly as possible.
 - Sudden lever operation especially while hoisting a load will cause the load to slew, giving a great impact to the machine, and thus may break the crane or overturn the machine.
- Lowering the boom increases the working radius and the rated total load that can be hoisted decreases. Be extremely careful so that the load weight will not be overloaded with the boom most lowered when working by boom derricking the boom.

Operate the boom derricking lever (4) as follows.

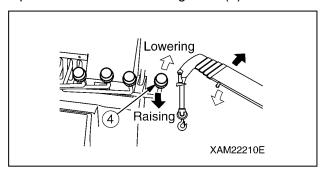

Fig. 4-169

- Lower: Push the lever forward to the
 - "LOWER" side.
- Neutral: Release your hand from the lever.

The lever goes back to the "Neutral" position and the boom derricking stops.

• Raise: Pull the lever toward you to the

"RAISE" side.

NOTICE: Adjust the boomderricking speed using the stroke of the acceleration pedal and lever operation.

Boom Telescoping Operation

WARNING!

- Operate the boom telescoping lever as slowly as possible.
 Sudden lever operation especially while hoisting a load will cause the load to sle
 - hoisting a load will cause the load to slew, giving a great impact to the machine, and thus may break the crane or overturn the machine.
- Do not pull the load horizontally or pull in the load by telescoping the boom.

- Extending the boom increases the working radius and the rated total load that can be hoisted decreases. Be extremely careful so that the load weight will not be overloaded with the boom most extended when working by telescoping the boom.
- When the boom is extended, the hook block is raised.
 - If the alarm buzzer of the over winding detector and the audible message of "Hook Over Hoisted" are heard during the boom extending operation, return the boom telescoping lever immediately to the "Neutral" position and stop the boom extending operation.

CAUTION:

- The hook block is raised or lowered while telescoping the boom. Perform the winch operation at the same time to adjust the hook block height.
- The hook block is raised or lowered while telescoping the boom. Perform the winch operation at the same time to adjust the hook block height.
- When the boom is maintained extended for a long time, the boom slightly retracts due to the temperature change in the hydraulic oil. In this case, extend the boom as needed.

Perform the boom telescoping lever (2) as follows.

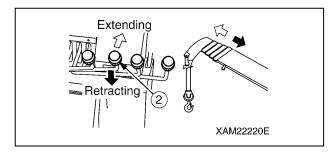

Fig. 4-170

- Extend: Push the lever forward to the "EXTEND" side.
- Neutral: Release your hand from the lever.
 The lever returns to the "Neutral" position and the boom telescoping stops.
- Retract: Pull the lever toward you to the "RETRACT" side.

NOTICE: Adjust the boom telescoping speed using the stroke of the acceleration pedal and lever operation.

4-64 12/2022 MC305CB-3

Slewing Operation

WARNING!

- Check the safety around and honk the horn before slewing.
- Operate the slewing lever as slowly as possible.
 - Start smoothly, slew at low speed, and stop gently.
 - Sudden lever operation especially while hoisting a load will cause the load to slew, causing the loss of stability in the machine, and thus may break the crane or overturn the machine.
- Even if the outriggers are set normally, some directions have lower stability when swang for 360 degrees. Be extremely careful when slewing while hoisting a load.
- Depending on how outriggers are extended, the hoisted load may hit an outrigger during the slewing operation, breaking the crane or overturning the machine. Be careful not to let the hoisted load hit an outrigger.

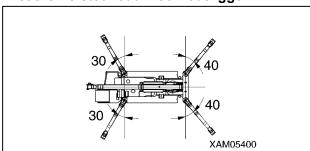

Fig. 4-171
Operate the slewing lever (1) as follows.

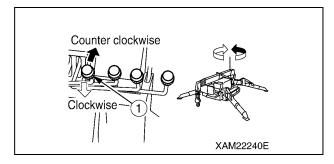

Fig. 4-172

- Slew counterclockwise (left): Push the lever forward to the "LEFT" side.
- Neutral: Release your hand from the lever.
 The lever returns to the "Neutral" position and the slewing stops.
- Slew clockwise (right): Pull the lever toward you to the "RIGHT" side.

NOTICE: Adjust the crane slewing speed using the stroke of the acceleration pedal and lever operation.

Motor Speed Operation

WARNING! Accelerating the operation speed of the crane

CAUTION:

- Decrease the speed in the beginning or near the end of an operation. Change the speed to low speed or high speed according to the load.
- The motor speed can be adjusted using the Transmitter when operating using remote control.

Operate the acceleration pedal (6) as follows.

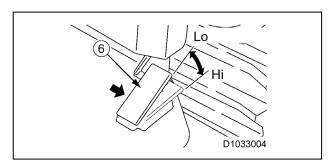

Fig. 4-173

[OUTRIGGER/CRANE MODE]

- Lo: The motor operates at the lowest speed for any operation performed.
- Hi: Depressing the pedal increases the motor speed for any operation performed.

[TRAVELLING MODE]

- Lo: The motor does not rotate regardless of travelling operations.
- Hi: Depressing the pedal increases the motor speed for travelling operations.

NOTICE:

- Depress the pedal until you reach the motor speed required for the operation being performed.
- In eco mode, the maximum motor speed may not necessarily be achieved even if the pedal is depressed to the "Full speed" position.
- The motor speed will not change if the pedal is depressed while the motor is not running. The motor runs when an outrigger or crane operation is input.

 Travelling operations alone will not cause the motor to run. The pedal must be depressed while performing travelling operations.

Crane Stowing Operation

CAUTION: The hook stowing switch cancels the auto stop function of the over winding detector.

Operate the winch lever carefully not to let the hook block hit the boom when stowing the hook block.

CAUTION:

- Stop the slew of the hook block before stowing the hook block.
- When stowing the hook block, do not topple the entire hook block sideways on the ground by loosening the wire cable too much. This will cause the irregular winding on the winch drum.
- The boom "retracting" operation will lower the hook block. The hook block also lowers with the boom "lowering" operation. Raise the hook at the same time so that the hook block will not touch the ground or interfere with the machine.
- Stow the boom securely into the stowing position. After stowing the boom, verify that the boom stowing lamp on the outrigger display lights up in green. If the boom stowing lamp does not light up, the outriggers cannot be stowed. If the boom stowing lamp does not light up, lower the boom to the maximum or slew the boom to verify that the boom stowing lamp lights up.

1. Operate the boom telescoping lever (2) to the "RETRACT" (pull toward you) side to fully retract the boom.

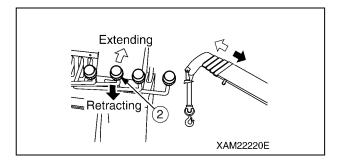

Fig. 4-174

Operate the slewing lever (1) to the "LEFT" side, and slowly slew the boom counterclockwise (left) to the operation of 7 degrees left from the centre of the machine. When the boom comes to the stowing position, slew stops automatically.

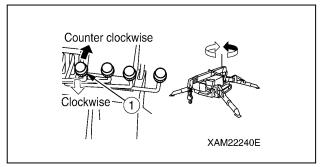

Fig. 4-175

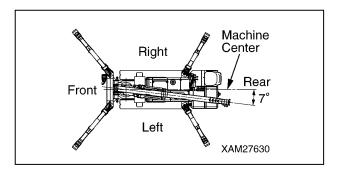

Fig. 4-176

NOTICE: Operate with the slew lever and do not use the remote control.

4-66 12/2022 MC305CB-3

3. Operate the boom derricking lever (4) to the "LOWER" (push forward) side and lower the boom until it automatically stops.

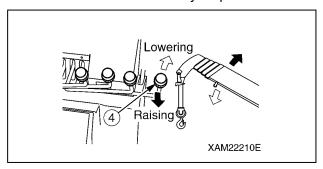

Fig. 4-177

 With the boom stowing switch on the monitor depressed, operate the boom derricking lever (4) to the "LOWER" (push forward) side to stow the boom in its fully lowered state.

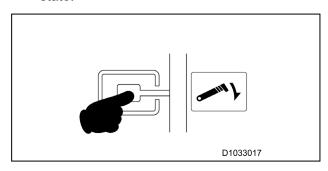

Fig. 4-178

NOTICE:

- The boom cannot be stowed by pressing the switch unless it has been lowered to the point where it automatically stops.
- The boom is stowed only while the switch is depressed.
- 5. Operate the winch lever (3) to the "UP" (pull toward you) side and winch until the hook block automatically stops (over hoist).

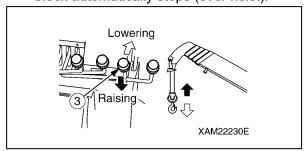

Fig. 4-179

NOTICE: Hoisting the hook block too much will result in the detection of over hoist. Then the alarm buzzer and audible message of "Hook Over Hoist" are heard and the hook raising operation automatically stops.

6. With the hook stowing switch on the monitor depressed, operate the winch lever (3) to the "UP" (pull toward you) side to stow the hook at the bottom of the boom end.

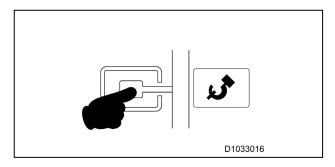

Fig. 4-180

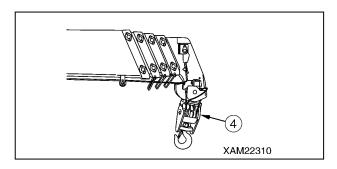

Fig. 4-181

7. Verify that the boom stowing lamp (1) (green) on the outrigger display lights up.

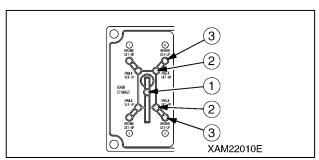

Fig. 4-182

NOTICE: If the boom stowing lamp (1) (green) on the outrigger display does not light up, repeat the boom lowering operation to the lowest position and slewing operation.

MOMENT LIMITER (OVERLOAD DETECTOR)

Moment Limiter Features

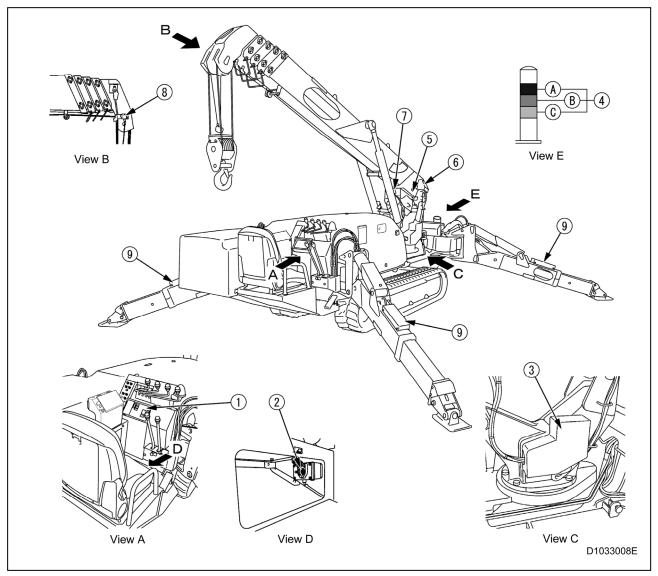

Fig. 4-183

- 1 Moment limiter display unit
- 2 Moment limiter override switch
- 3 Moment limiter converter
- 4 Working status lamp
 - (A) Red working status lamp (Warning light for load factor of 100 % or more)
 - (B) Yellow working status lamp (Prewarning light for load factor of 90 to 100 %)
 - (C) Green working status lamp (Working light for load factor of less than 90 %)

- 5 Boom length gauge (inside boom)
- 6 Boom angle gauge (side of boom rear edge)
- 7 Pressure sensor (derrick cylinder) (two)
- 8 Overwind alarm detector (side of boom tip)
- 9 Outrigger position detection switch

4-68 12/2022 MC305CB-3

Function of Moment Limiter

WARNING!

- Do not remove, disassemble, or repair detectors. Do not move the detectors to another location from original position.
- Should an object hit a detector or you find any damage on a detector, be sure to verify the actuation status of the auto stop. If you find any abnormality with the actuation of the auto stop, do not fail to fix it
- Do not turn ON the moment limiter override switch unless you find an error or check/perform maintenance on detectors.
- Overloading can cause the hoisted load to fall, boom breakage, or overturning of this machine that can lead to serious accidents resulting in death or serious injury.
- The machine will not stop automatically even if the crane is overloaded during the crane slewing operation.
 Do not slew the crane when being overloaded.
- When the boom approaches the stop position during the operation, be sure to change the operation speed of the boom to low speed.

With high-speed boom operation, the boom may overrun the specified stop position, causing serious accidents such as overturning of the machine resulting in death or serious injury.

If the Moment Limiter Override Switch is "ON" (Override), the Working Status Lamp will light in red, and an alarm buzzer will sound intermittently.

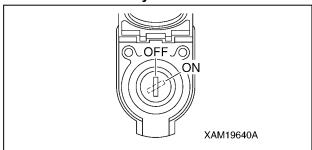

Fig. 4-184

The moment limiter is a device installed to prevent the hoisted load from falling, the boom from breaking, or the machine from overturning due to overloading.

Always check the operation of the moment limiter before crane operation to verify no abnormality.

Mechanism of Moment Limiter

The moment limiter calculates current "rated total load" by knowing the current boom posture by the boom angle gauge and the boom length gauge, by knowing the outrigger extension condition by the outrigger position switch, and by knowing the number of wire falls (entered by the operator).

Then by actually hoisting a load, the "read load" (hoist load) is sent from the pressure sensor of the derrick cylinder to the moment limiter.

The moment limiter comparatively calculates between the "rated total load" computed out of the current posture and the "real load" (hoisted load), and issues an alarm if the result indicates the rated total load/real load=90 to 100%.

If the calculation result indicates the rated total load/real load=above 100%, an alarm is issued and the causes the boom operation to automatically stop.

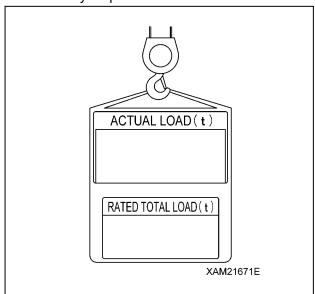

Fig. 4-185

Display of Moment Limiter Error Messages

The moment limiter performs self-diagnosis on the moment limiter display unit when an error is issued by the boom angle gauge, boom length gauge, pressure sensor, or when a circuit is opened or a connector is disconnected.

The result is displayed on the "rated total load display" of the moment limiter display unit by an error code to notify the operator of the error. Immediately stop the use of the crane when an error code is displayed.

See "Moment Limiter Error Codes" on page 5-80.

Moment Limiter Operations

The moment limiter is a device for unexpected events. Operations relying on the device will rather incur danger.

Pay sufficient attention during the operation not to cause auto-stop of the crane.

Prohibited Actions after Auto Stop

DANGER! The following crane operations are prohibited after the crane has stopped automatically due to overloading. These operations may cause overturning of the machine or breakage of the boom and are very dangerous.

- Boom lowering operation
- Boom extending operation
- Hook raising operation
- · Crane slewing operation
- Boom raising operation

Recovery Operation after Auto Stop

DANGER! When operating the crane while the moment limiter load factor display indicates 90% or higher, operate carefully without using the acceleration pedal. Performing crane operation at high motor speed will slew the hoisted load and is very dangerous, causing overloading and it may break the boom.

1. With load factor of "less than 90 %"

When the hoisting load is less than 90 % of the rated total load, the working status lamp in green, indicating normal operation status.

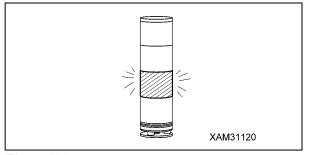

Fig. 4-186

4-70 12/2022 MC305CB-3

2. With load factor of "90 to less than 100 %"

When the hoisting load reaches 90 % of the rated total load (pre-warning), the working status lamp changes from green to yellow and the alarm sounds intermittently, notifying the operator and those around that the hoisting load is close to the rated total load.

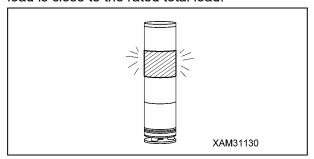

Fig. 4-187

3. With load factor of "100 % or higher"

When the hoisting load reaches 100 % of the rated total load by continuing the crane operation after exceeding 90 % of the rated total load (pre-warning), the working status lamp changes from yellow to red and the alarm now sounds continuously. The following crane operations will stop automatically.

- · Hook raising operation
- · Boom extending operation
- Boom lowering operation
- · Boom raising operation

The audible message of "Peep, overloading" will be issued. Furthermore, the LED of "100 %" on the moment limiter load factor display lights up.

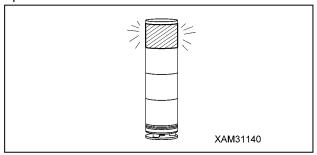

Fig. 4-188

4. Recovery Operation from Auto Stop

The recovery operation from overloading should be the reverse operation of the crane operation that caused the auto stop. Perform one of the followings.

(1) Lower the hook and put down the hoisted load on the ground.

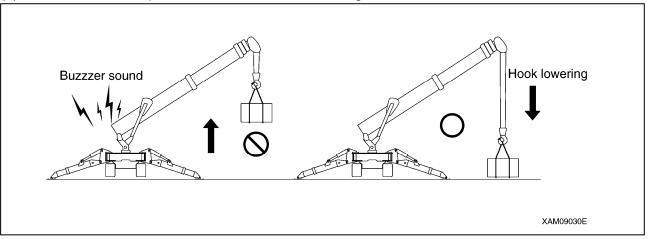

Fig. 4-189

(2) Retract the boom.

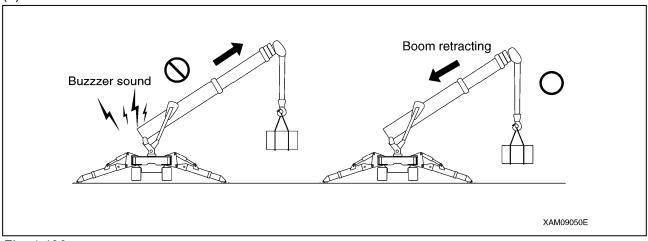

Fig. 4-190

5. When recovering by boom raising operation

In the case of an automatic stop, when raising of the boom is unavoidable, the boom raising operation is possible only while keeping the boom lift bypass switch in the "ON" position.

To return to the "OFF" position, also return the boom raising lever.

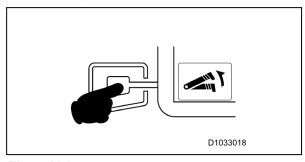

Fig. 4-191

DANGER! Only use this switch when an automatic stop has occurred through entry into the overload region while lowering or extending the boom.

Do not use under normal conditions or when lifting clear from the ground.

If you use this switch when lifting from the ground, there is a risk of serious accidents such as the machine being damaged or overturning.

4-72 12/2022 MC305CB-3

Moment Limiter Display

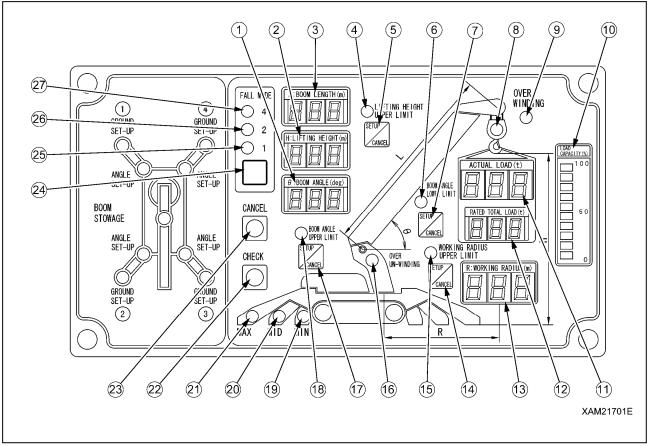

Fig. 4-192

- 1 Boom angle display
- 2 Lifting height display
- 3 Boom length display

- 21 Outrigger MAX. extension LED (Blue)
- 22 Check switch
- 23 Cancel switch
- 24 Fall mode selector switch
- 25 Single-fall LED (Blue)
- 26 2-falls LED (Blue)
- 27 4-falls LED (Blue)

Descriptions of Switches on Moment Limiter Display

Fall Mode Selector Switch and Fall Mode Display LED (Blue)

DANGER! When entering the number of falls, verify the actually used number of falls and make sure to set up correctly.

Entering incorrect number of falls may prevent issuance of the pre-warnings and boom auto-stop even when the overload is near happening, and thus may result in crane damage or machine trip that may result in serious accidents.

Use this switch to change the number of wire falls.

- Keep pressing the switch for 2 seconds or more.
 The setting changes from "4-falls" to "1-fall".
 At the same time, the fall mode display LED changes from "4-falls" to "1-fall", indicating that the setting has changed.
- Then each time you press the switch for 2 seconds or more, the setting of the number of wire falls changes from "1-fall" to "2-falls", and then from "2-falls" to "4-falls".

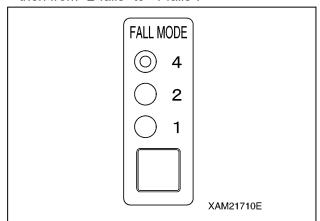

Fig. 4-193

NOTICE: When changing the setting right after doing so, release your hand from the switch, and then press the switch again.

Boom Angle Upper Limit Switch and LED (Orange)

Use this switch to set or cancel the boom angle upper limit.

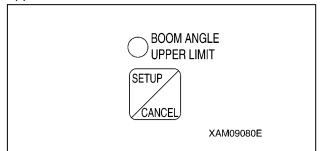

Fig. 4-194

Setup

With no upper limit value being set, set the boom to the angle you would like, and press the switch for 2 seconds.

The boom angle at this point is set as the upper limit

At the same time, the LED lights up indicating that the upper limit value was set.

To enable this setting, turn the starter switch to the "ON" position again after turning it to the "OFF" position, or lower the boom by "10 degrees" or more from the set boom angle to get out of the pre-warning zone.

NOTICE: Be sure to verify that the boom automatically stops at the set angle before performing the actual operation. If the boom does not stop automatically, re-set the boom angle using the procedure above.

When the boom reaches the pre-warning zone or stops at the upper limit with the boom angle upper limit set, the boom angle upper limit LED flashes.

Cancel

With the upper limit value being set (LED ON), press the switch for 5 seconds.

The current upper limit value setting will be cleared. At the same time, the LED goes off indicating that the upper limit value setting is cleared.

NOTICE: The setting and cancelling will not repeat even if you keep the switch pressed for more than 2 seconds. Let your hand go off the switch and press the switch again.

4-74 12/2022 MC305CB-3

Boom Angle Lower Limit Switch and LED (Orange)

Use this switch to set or cancel the boom angle lower limit.

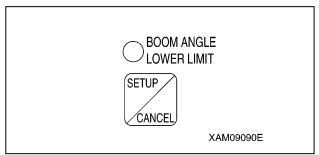

Fig. 4-195

Setup

With no lower limit value being set, set the boom to the angle you would like, and press the switch for 2 seconds.

The boom angle at this point is set as the lower limit.

At the same time, the LED lights up indicating that the lower limit value was set.

To enable this setting, turn the starter switch to the "ON" position again after turning it to the "OFF" position, or raise the boom by "7 degrees" or more from the set boom angle to get out of the pre-warning zone.

NOTICE: Be sure to verify that the boom automatically stops at the set angle before performing the actual operation. If the boom does not stop automatically, re-set the boom angle using the procedure above.

When the boom reaches the pre-warning zone or stops at the lower limit with the boom angle lower limit set, the boom angle lower limit LED flashes.

Cancel

With the lower limit value being set (LED ON), press the switch for 5 seconds.

The current lower limit value setting will be cleared. At the same time, the LED goes off indicating that the lower limit value setting is cleared.

NOTICE: The setting and cancelling will not repeat even if you keep the switch pressed for more than 2 seconds. Let your hand go off the switch and press the switch again.

Working Radius Upper Limit Switch and LED (Orange)

Use this switch to set or cancel the working radius upper limit.

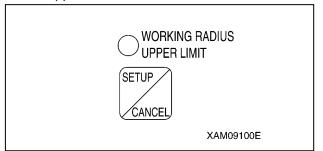

Fig. 4-196

Setup

With no upper limit value being set, set the boom to the working radius you would like, and press the switch for 2 seconds.

The working radius at this point is set as the upper limit.

At the same time, the LED lights up indicating that the upper limit value was set.

To enable this setting, turn the starter switch to the "ON" position again after turning it to the "OFF" position, or reduce the working radius by "1.3 m" or more from the set working radius to get out of the pre-warning zone.

NOTICE: Be sure to verify that the boom automatically stops at the set working radius before performing the actual operation. If the boom does not stop automatically, re-set the working radius using the procedure above.

When the boom reaches the pre-warning zone or stops at the upper limit with the working radius upper limit set, the working radius upper limit LED flashes.

Cancel

With the upper limit value being set (LED ON), press the switch for 5 seconds.

The current upper limit value setting will be cleared. At the same time, the LED goes off indicating that the upper limit value setting is cleared.

NOTICE: The setting and cancelling will not repeat even if you keep the switch pressed for more than 2 seconds. Let your hand go off the switch and press the switch again.

Lifting Height Upper Limit Switch and LED (Orange)

Use this switch to set or cancel the hook height upper limit.

While the hook height is restricted by detecting the height of the tip of the boom, the hook height on the display panel shows the hook height when the hook was raised to the over hoist detection status.

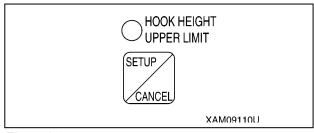

Fig. 4-197

Setup

With no upper limit value being set, set the boom to the hook height you would like, and press the switch for 2 seconds.

The hook height at this point is set as the upper limit.

At the same time, the LED lights up indicating that the upper limit value was set.

To enable this setting, turn the starter switch to the "ON" position again after turning it to the "OFF" position, or reduce the hook height by "1.3 m" or more from the set hook height to get out of the pre-warning zone.

NOTICE: Be sure to verify that the boom automatically stops at the set hook height before performing the actual operation. If the boom does not stop automatically, re-set the hook height using the procedure above.

When the boom reaches the pre-warning zone or stops at the upper limit with the hook height upper limit set, the hook height upper limit LED flashes.

Cancel

With the upper limit value being set (LED ON), press the switch for 5 seconds.

The current upper limit value setting will be cleared. At the same time, the LED goes off indicating that the upper limit value setting is cleared.

NOTICE: The setting and cancelling will not repeat even if you keep the switch pressed for more than 2 seconds. Let your hand go off the switch and press the switch again.

Cancel Switch

Use this switch to cancel the all setting sets in the section 2 to 5 above.

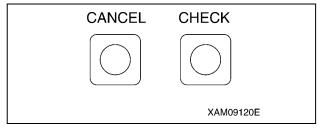

Fig. 4-198

 Press this switch and "CHECK" switch at the same time for 5 seconds or more.
 The all value sets in the section 2 to 5 above will be cancelled.

Check Switch

Use this switch to verify the values set in the section 2 to 5 above.

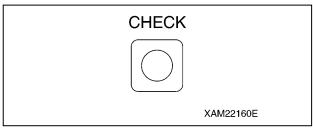

Fig. 4-199

 Press this switch. Every time the switch is pressed, the set value will be displayed in the following order.

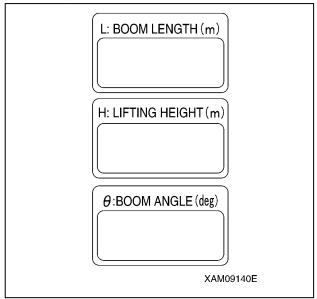

Fig. 4-200

4-76 12/2022 MC305CB-3

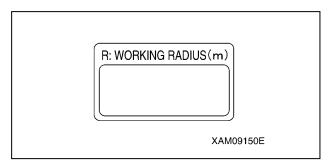

Fig. 4-201

- (1) "Boom angle upper limit value" is displayed at the boom angle display section.
- (2) "Boom angle lower limit value" is displayed at the boom angle display section.
- (3) "Working radius upper limit value" is displayed at the working radius display section.
- (4) "Hook height upper limit value" is displayed at the lifting height display section.
- (5) Returns to the original display.

NOTICE:

- When a set value is displayed, the LED for its setting switch section flashes at the same time.
- If no switch was pressed for 5 seconds or another switch was pressed with a set value being displayed, the display goes back to the original display.
- The display will be a blank for the item to which no value is set.
- The display sections other than for the corresponding items will be blank.

Descriptions of Moment Limiter Display

For LEDs not described in this section, see "Moment Limiter Display" on page 4-73.

Actual Load Display Section

This section constantly displays the actual load of the hoisted load during the crane operation.

The actual load indicates the total weight of the hoisted load and lifting ring excluding the hook weight.

If "0.0" to "0.1" is displayed when nothing is being hoisted, the system is normal.

If the value displayed is out of this range, contact us or our sales service agency.

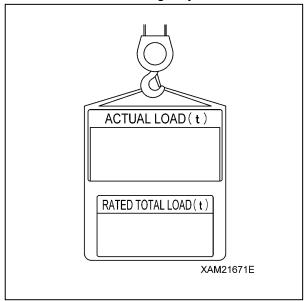

Fig. 4-202

Rated Total Load Display Section

This section displays the number of wire falls on the hook, working radius, currently hoistable rated total load (hook weight + lifting ring weight + load to be hoisted) computed out of the conditions such as the degree of outrigger extension.

Working Radius Display Section

This section constantly displays the current working radius during the crane operation. The working radius is the horizontal distance from the crane slewing centre to the centre of the hook.

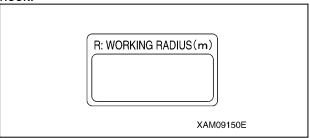

Fig. 4-203

Boom Length Display Section

This section constantly displays the current boom length during the crane operation.

The boom length is the distance from the boom root pin to the sieve pin at the end of the boom.

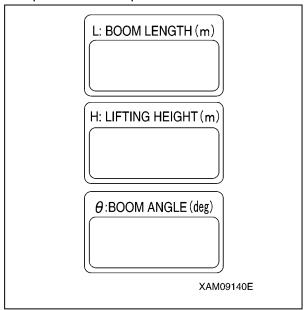

Fig. 4-204

Lifting Height Display Section

This section constantly displays the current lifting height during the crane operation.

The lifting height is the vertical distance from the ground to the bottom of the hook.

Boom Angle Display Section

This section constantly displays the current boom angle during the crane operation.

The boom angle is the angle the boom and the horizontal line form.

Over Winding Detector

CAUTION: Pay attention to the distance between the hook and boom when raising the hook.

Extending the boom also raises the hook. Always check the hook height when extending the boom.

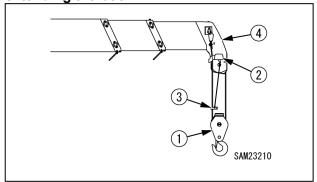

Fig. 4-205

- 1 Hook block
- 2 Over winding detector
- 3 Weight
- 4 Boom

When the hook block (1) was raised or the boom (4) was extended, the over winding detector intermittently activates the buzzer to warn the operator of over winding if the hook block (1) approached the end of the boom (4) and pushed up the weight (3).

At the same time, the raising of the hook block (1) and the extension of the boom (4) stop automatically.

When a warning buzzer sounds, operate the winch lever immediately to the "LOWER" side or operate the boom telescoping buzzer to the "RETRACT" side to lower the hook block (1).

If you overwind the hook when raising the hook or extending the boom, the following occurs:

- The "OVER WINDING" LED (red) flashes.
- · The alarm bleeps continuously.
- The hook raising and boom extending operation stop automatically.
- The voice saying "hook is overwinded" is heard.
 In case of auto stop, immediately perform the recovery operation.

4-78 12/2022 MC305CB-3

Perform hook lowering and boom retracting operations as recovery operations.

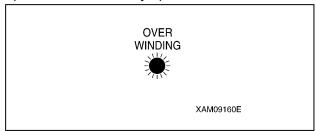

Fig. 4-206

Outrigger Extension LED (Blue)

The LED lights up to indicate the outrigger extension status.

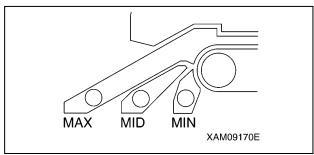

Fig. 4-207

- If any of the four outriggers has not properly reached the middle extension position, the "MIN" LED lights up.
- If all the four outriggers properly reach the middle extension position, the "MID" LED lights up.
- If all the four outriggers reach the maximum extension position, the "MAX" LED lights up.
 Even if you thought you had set the outriggers at the maximum extension position, the "MID" LED lights up if any of the outriggers did not properly reach the maximum extension position.

Load Factor LED (Changes to Green/ Yellow/Red)

This LED indicates the status of the moment limiter load factor by its illumination.

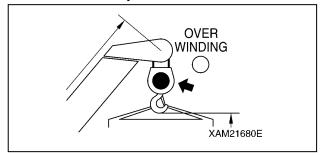

Fig. 4-208

- The LED lights up in green if the load factor is less than 90 %.
- The LED lights up in yellow if the load factor is 90 to less than 100 %.
- The LED lights up in red if the load factor is 100 % or higher.

Load Factor Display (Yellow)

This display indicates the status of the moment limiter load factor by its illumination.

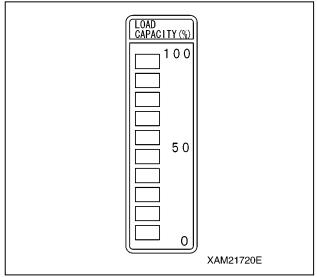

Fig. 4-209

- The load factor is indicated by ON/OFF of the "bar" according to the changes of the load factor.
- All the "bars" will be ON when the load factor reaches 100 % or higher.

NOTICE: When the load factor is about 50 %, all the "bars" around the number "50" on the right and below are ON.

All the "bars" around the number "50" and above are OFF.

Moment Limiter Functions

Overload Warning

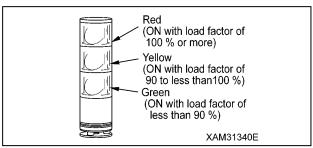

Fig. 4-210

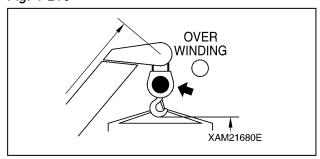

Fig. 4-211

- **1. Safety Zone** ("Actual load" is less than 90 % of the "rated total load")
 - · Green of the working status lamp lights up.
 - The LED lights up in green if the load factor is less than 90 %.
- **2. Pre-Warning** ("Actual load" is 90 to less than 100 % of the "rated total load")
 - · Yellow of the working status lamp lights up.
 - The LED lights up in yellow if the load factor is 90 to less than 100 %.
 - The alarm bleeps intermittently.
- **3. Limit Warning** ("Actual load" is 100 % or higher than the "rated total load")
 - Red of the working status lamp lights up.
 - The LED lights up in red if the load factor is 100 % or higher.
 - The alarm bleeps continuously.
 - The hazardous operation of the boom stops automatically.
 - Voice message of "Overloading" is heard.
 - "Load factor 100 % or more" LED (yellow) lights up.

4. Clearing Limit Warning Auto Stop

If the system stops automatically, promptly perform the recovery operation caused by overloading.

See "Recovery Operation after Auto Stop" on page 4-70 for recovery operations.

Working Envelope Restriction Warning

When the working envelope gets close to the set restriction value, a warning is issued to notify the operator and people around of the situation.

The last status of the set value for the working envelope restriction is memorised even if the starter switch is turned to the "OFF" position.

NOTICE: See "Descriptions of Switches on Moment Limiter Display" on page 4-74 for how to set the value for working envelope restriction.

When the working envelope has been set, the restriction will be as follows.

1. Safety Zone

- The appropriate working envelope restriction LED (orange) lights up.
- · Green of the working status lamp lights up.

2. Pre-Warning

- The appropriate working envelope restriction LED (orange) lights up.
- · The alarm bleeps intermittently.
- · Yellow of the working status lamp lights up.

3. Limit Warning

- The appropriate working envelope restriction LED (orange) lights up.
- · Red of the working status lamp lights up.
- The alarm bleeps continuously.
- The hazardous operation of the boom stops automatically.

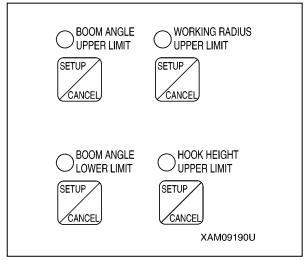

Fig. 4-212

4-80 12/2022 MC305CB-3

Number of Wires Selector Switch

WARNING!

- Stop the crane operation when changing the number of wires hooked using the number of wires selector switch.
- Changing the number of wires during the crane operation can cause unexpected accidents.
- Perform the crane operation always after matching the number of wires display on the moment limiter and the actual number of wires. Mistaking the number of wires cause serious accidents.

The wire cable has the safe load per cable determined.

Determine the number of wires according to the maximum load to be hoisted.

The actual number of wires hooked and the number of wires display on the moment limiter must match.

With this machine, the hook for four wire cables is referred to as the standard specifications.

The last status of the set number of wires is memorised even if the starter switch is turned to the "OFF" position.

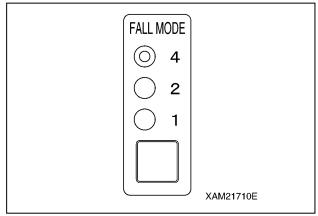

Fig. 4-213

Boom Upper Limit Detection

When the boom is raised and the boom angle reaches "about 77 degrees", the boom raising operation stops automatically.

Boom Lower Limit Detection

When the boom is lowered and the boom angle reaches "about 3 degrees", the boom lowering operation stops automatically.

Outrigger Extension Detection

The outrigger extension status is detected with the limit switch mounted to each of four outriggers, lighting the appropriate LED (blue) of the "MIN", "MID", or "MAX" and changing the rated total load.

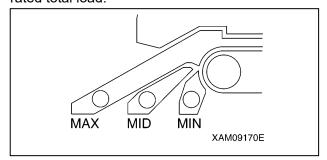

Fig. 4-214

Moment Limiter Starting Status

The moment limiter checks its function when the starter switch is turned to the "ON" position. Meanwhile.

- The red of the working status lamp lights up.
- All the LEDs light up.
- The horn sounds momentarily.

Then, if the moment limiter and the sensors are normal upon the completion of the functional check of the moment limiter, the red of the working status lamp goes off and green of the working status lamp up indicating that the machine is ready for use.

CAUTION: If the red light of the working status lamp does not go off after completing the functional check of the moment limiter, even if no load is being lifted, be sure to contact us or our sales service agency.

Moment Limiter Working Envelope Setting

WARNING!

- The boom may go beyond the set value when operated at high speed even if the working envelope was restricted by the moment limiter.
 Be sure to set the working envelope with safe distance from obstacles.
 - Operate the crane at low speed.
- Be sure to verify that the boom stops at the set position after setting the boom working envelope.

If the boom working envelope is limited due to working space issue, you can set the boom working envelope to the desired value.

Setting Working Envelope

Operate the boom to the limit of the working envelope you would like to restrict, and press the appropriate SETUP/CANCEL switch for 2 seconds.

You can set that limit value.

At the same time, the LED above the appropriate switch lights up.

Moving the boom to the following state after setting the limit value enables restriction control.

"Set value – 10 degrees or more" for boom upper limit.

"Set value + 7 degrees or more" for boom lower limit.

"Set value – 1.3 m or less" for working radius upper limit

"Set value – 1.3 m or less" for hook height (With [Lower] or [Retract] operation of the boom)

Or, turn the starter switch to the "OFF" position and then turn again to the "ON" position to enable the restriction.

NOTICE: The last status of the set value has been held in memory even if the starter switch is turned to the "OFF" position.

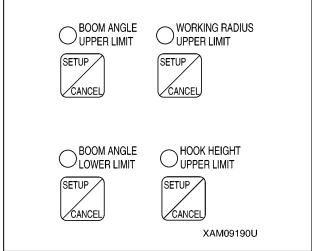

Fig. 4-215

Cancelling Working Envelope Setting

 Press and hold the CANCEL switch and CHECK switch at the same time for 5 seconds or more.

All the set working envelope restrictions are cancelled.

At the same time, the LED above all the working envelope limit switches go off to complete the cancellation of the settings.

 Press the SETUP/CANCEL switch of the item which restriction you would like to cancel for 5 seconds.

The set value of only the item can be cancelled. At the same time, the LED above the switch goes off to complete the cancellation of the setting.

NOTICE: See "Descriptions of Switches on Moment Limiter Display" on page 4-74 for how to set limit on the working envelope.

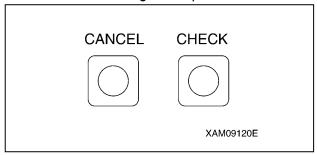

Fig. 4-216

4-82 12/2022 MC305CB-3

Moment Limiter Override Switch

DANGER!:

The moment limiter override switch disables ALL safety features, ALL limits and ALL automatic stops of the Moment Limiter Digital Load Safety System.

When this switch is turned to the "ON" position (OVERRIDE), all the Moment Limiter's interlocked automatic safety/ stop /limit features become INACTIVE & DISABLED. All crane operations in this situation are unprotected by the Moment Limiter system.

The risk of a crane accident increases greatly without the use of the Moment Limiter system. The Moment Limiter system is a safety aid to the operator, not a tool or excuse for poor and dangerous crane operation.

With or without the protection of the Moment limiter system, crane operation outside of the parameters of the Rated Total Load Chart(s), unsafe operations beyond accepted safe crane practices and proper crane operation technics may result in dropping of a hoisted load, breakage of crane components or the machine tipping over. A serious accident resulting in death or serious injury may occur.

Use this switch only in the case of an emergency due to failure of the Moment Limiter system, and or machine maintenance / service when any crane travel, lifting operations are not being performed.

Do not store the override key permanently in the moment limiter override switch box.

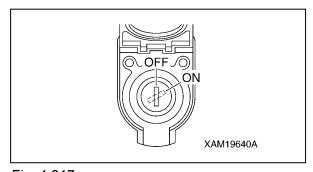

Fig. 4-217

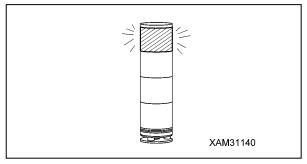

Fig. 4-218

To Override the Moment Limiter System:

- The moment limiter override switch box is located inside the door under the operation seat.
- KEY TO "ON" POSITION = OVERRIDE Insert the OVERRIDE KEY into the moment limiter override switch box. Turn the key clockwise (right) to "ON" position. (The spring-loaded switch automatically returns to the "OFF" position when you release the key). Now the system is in OVERRIDE. ALL safety features, ALL limits and ALL automatic stops of the Moment Limiter system are INACTIVE & DISABLED for a total of 3 minutes.
- The moment limiter override switch box LED light will illuminate solid for 2-1/2 minutes, then it will flash for the last 30 seconds of OVERRIDE.
- The Working status lamp will flash RED during OVERRIDE.
- The Moment Limiter warning buzzer /alarm will sound continuously for 3 minutes.
- The speed of all machine operations is reduced.
- The maximum motor speed will be restricted.
- To discontinue OVERRIDE, at any time under 3 minutes, turn the starter key to the "OFF" position shutting down the machine. Restart the machine as normal, and the Moment Limiter system will commence with normal start up sequence.

BATTERY HANDLING

Battery Precautions

DANGER! The following points must be strictly observed to prevent fire:

- · Keep the battery away from open flames.
- · Do not heat or throw the battery onto a fire.
- Do not leave the battery in a hot location for extended periods.
- Do not use any battery charger other than the one provided. Doing so may cause electrolyte leakage, abnormal heating, smoke, rupture, or fire.
- Do not charge the battery except using the specified voltage. There is a risk of fire if charged at an excessive voltage.
- Do not allow static electricity to be generated in the vicinity. There is a risk of ignition or explosion due to static electricity.
- · Do not solder the terminals.

The following points must be strictly observed to prevent electric shock:

- Do not unplug the power plug by pulling on the cable.
- Do not open the charging port cover except when charging.
- Unplug the power supply cable except when charging.
- · Do not touch with wet hands.
- Do not touch parts inside the machine when the power plug is plugged in.
- Do not charge in rainy weather.

The following points must be strictly observed when handling the battery terminals:

- Wear insulating gloves and do not touch the positive or negative terminals with your bare hands. Before handling the battery, turn the starter switch to the "OFF" position, and then be sure to wait at least one minute before turning the disconnect switch to "UNLOCK".
- Do not allow a short circuit between the positive and negative terminals. Otherwise there is a risk of damage to electronic components or of burn injuries from overheated components.

- Do not connect the positive and negative terminals in reverse. Otherwise there is a risk of damage due to fluid leakage, overheating, rupture, or fire.
- Tighten the battery terminals securely.
 There is a risk of fire if the battery terminals are loose.

(Designated torque: 5.0 to 6.8 N·m)

High-Voltage Cable Precautions

The cables in the vicinity of the disconnect switch are high-voltage cables. Do not touch these cables with your bare hands. Otherwise there is a risk of burns or fatal accident due to electric shock.

In situations where it is necessary to touch the cables, be sure to turn the starter switch to the "OFF" position and then wait for at least one minute before turning the disconnect switch to "UNLOCK". Be sure to wear insulating gloves when handling.

Warning Signs During Maintenance

In situations where it becomes necessary to move away from the machine while carrying out maintenance or repairs on the battery unit, place warning signs around the machine indicating "High Voltage Work in Progress. Do Not Touch" to prevent other workers from touching the machine.

Do not disassemble or modify the battery. Otherwise there is a risk of accidents or malfunction due to fluid leakage, overheating, smoke generation, fire, rupture, or electric shock.

The following points must be strictly observed when carrying out maintenance work:

- Do not wear electrically conductive items such as rings, necklaces, or wristwatches when carrying out work, as these items carry a risk of short-circuiting or electric shock.
- Maintenance work must be carried out by skilled personnel who have received the specified training.
- Insulated tools and protective equipment must be used when carrying out work.
 Inspect the tools and protective equipment before use to make sure they are not damaged.

4-84 12/2022 MC305CB-3

- Stop charging and isolate the charging circuit before carrying out maintenance work.
- If any worker receives an electric shock, helpers must wear insulated protective equipment to prevent further accidents due to electric shock.
- If smoke is emitted or fire occurs due to malfunctioning or incorrect usage, extinguish any fire and cool down the battery immediately.
- Do not mix different battery types together during use. Otherwise there is a risk of accidents or equipment malfunctions and failure.
- Do not open the battery output terminal covers except when carrying out work.
- Be sure to protect the output terminals with insulators when the battery is removed.

Avoid using or storing the battery under the following conditions. Otherwise there is a risk of accidents, malfunction, or failure due to fluid leakage, overheating, smoke generation, fire, or electric shock.

- Cold or hot locations at temperatures outside the operating temperature range of -20°C to 40°C
- Locations where the humidity exceeds 85%RH
- Locations where condensation may occur due to sudden temperature fluctuations
- Locations where the battery may be splashed with water or left standing in water
- Locations subject to strong vibration or impact
- Dusty locations
- Locations where corrosive gases, combustible gases, or salt, iron, or oil mists are present
- Locations in direct sunlight or close to equipment generating heat
- Locations close to equipment that generates strong radio waves or magnetic fields

Take care to avoid electrolyte leakage.

If electrolyte leakage is suspected (e.g., if the exterior is cracked or damaged, bulging or deformed, discoloured or corroded, or if there is an acrid smell), move the battery away from any open flames and stop using it.

If electrolyte leakage occurs, take the following actions:

- Move the battery away from any open flames and stop using it. Otherwise there is a risk of fire.
- Wipe up the leakage immediately wearing protective clothing, rubber gloves, and protective glasses. Never touch the leakage with bare hands.
- If you inhale electrolyte fumes, move immediately to a location with fresh air, remain at rest, and seek medical attention.
- If electrolytes splash onto clothing, change out of the contaminated clothing immediately.
- If electrolytes come into contact with your skin, rinse immediately using copious amounts of soap and water, then seek medical attention.
- If electrolytes come into contact with your eyes, do not rub, but rinse immediately under running water for at least 15 minutes.
 Then seek medical attention.
- If you ingest electrolytes, rinse out your mouth with water immediately, then seek medical attention.

If smoke is emitted or fire occurs, extinguish any fire and cool down the battery immediately. Carbon dioxide gas fire extinguishers, powder fire extinguishers, or dry sand should be used to extinguish fire.

Do not use different battery types mixed together. Always use the specified battery type.

Overcurrent protective devices for the automatic disconnection of the supply on detection of an insulation fault in TN systems. (IEC60204-32 Annex A)

CAUTION: Note the following precautions when using the battery:

- Do not drop the battery or subject it to strong impact. Otherwise there is a risk of accidents or failure if the exterior or interior becomes damaged.
 - Never use a battery after it has been subjected to impact. Even if it appears normal, it may be damaged internally.
- Use in locations where it will not be splashed with water or other fluids, or use in suitably waterproofed conditions.
- Never use high-pressure water jet cleaning when cleaning the machine.
- Leaving the machine in an emergencystopped state will drain the battery. Be sure to turn the starter switch to "OFF" when the machine is stopped for extended periods.
- Take care when using the battery at elevations above 1,000 m, as its cooling performance will be reduced.

Dealing with Emergencies

In emergencies such as machine failure or toppling, keep away from the machine, as there is a danger of electric shock. The machine must be handled only by experienced personnel who have received specialist training and are wearing insulating protective gear.

Action When the Battery Is Drained

DANGER! If the machine has just come to a stop due to low battery level, it can be operated for a short time by turning the override switch to "ON". Note, however, that this disables its safety mechanisms, so this procedure must be used only during emergencies, such as for stowing operations.

CAUTION: If the machine has stopped due to low battery level, one of the following measures should be taken to prevent over-discharging or reducing the battery performance:

- Charge the battery within 1 hour.
- If charging is not possible, disconnect the battery to prevent consumption and promptly move the machine to a location where it can be recharged.
 If the battery is consumed to the point of over-discharging, it will fail and require replacement.
- In locations where there are no charging facilities, stop work early to recharge the battery. Take into account the travel to the charging facilities.
- See "LONG-TERM STORAGE" for long term storage.

4-86 12/2022 MC305CB-3

Battery Charging

Monitor Display When Charging

The monitor will appear as follows if you attempt to charge the battery with the starter switch in the "OFF" position:

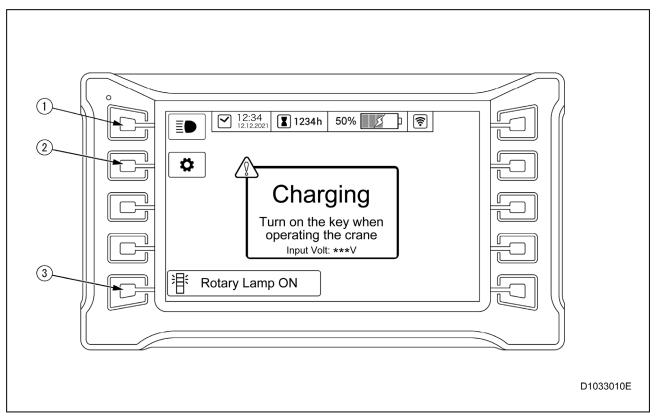

Fig. 4-219

- 1 Working light switch
- 2 User mode switch

Working Light Switch

Used to turn on the working light at the front of the machine.

Yellow indication: Working light on White indication: Working light off

User Mode Switch

Used for user settings.

Press the switch to switch to user mode.

For more information on user mode, see "User Mode" on page 4-18.

3 - Rotary lamp on/off selection

Rotary Lamp ON/OFF Selection

Allows the flashing working status lamp to be switched on or off while the battery is being charged.

ON: The working status lamp flashes. OFF: The working status lamp stays off.

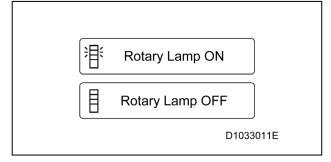

Fig. 4-220

Charging Method

CAUTION:

- Do not use any battery charger other than the one provided. Doing so may cause electrolyte leakage, abnormal heating, smoke, rupture, or fire.
- Do not charge the battery in places where it may get wet from rain or splashing water.
- Check that the charging port, power cable, and plug are free of water and dirt.

Recharge the battery when the battery charge is low.

If the battery is to be used for extended periods, it should be fully charged beforehand.

If the battery becomes drained, follow the procedures described in "Action When the Battery Is Drained" on page 4-86.

Charging may not start immediately at low temperatures. In such cases, wait a while for charging to start.

- 1. Take out the power supply cable.
- 2. Connect the power supply cable to the charging port.

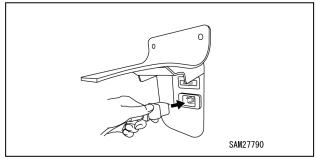

Fig. 4-221

3. Plug the power supply cable into the power supply outlet.

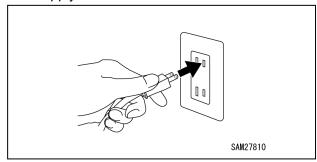

Fig. 4-222

4. Turn the starter switch to the "ON" position. Charging starts.

Once the battery is confirmed as charged on the monitor, turn the starter switch to the "OFF" position.

Turning the starter switch to the "OFF" position automatically turns off the power once charging is complete.

The charge level can also be checked during charging using the working status lamp.

Flashing green: 96% to 100% charge Flashing yellow: 80% to 95% charge Flashing red: 0% to 79% charge

The working status lamp flashing can be turned on or off via the monitor.

The power lamp on the side of the monitor lights up while charging is in progress.

If work is to be carried out while charging, leave the starter switch in the "ON" position. The power will not be turned off automatically when charging is complete in this state. Charging will also resume if the battery level falls below 50%.

 Once charging is complete, unplug the power supply cable from the power supply outlet.

WARNING! Do not remove the power supply cable from the charging port, as there is a risk of electric shock. When unplugging, always unplug by holding the plug and not by pulling the cable.

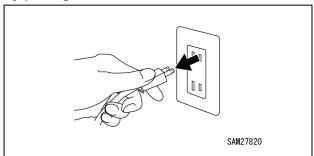

Fig. 4-223

- 6. Unplug the power supply cable from the charging port, then close the cover on the charging port.
- 7. Stow the power cable in the tool box.

4-88 12/2022 MC305CB-3

REMOTE CONTROL SYSTEM INTRODUCTION

This section describes the remote control operating procedures. Before you perform any remote control operating procedures, read "Section 2 SAFETY".

General

No Modification

WARNING! Do not attempt to modify or disassemble the Transmitter and Receiver, or the accessories, which may cause an electrical shock or a fire.

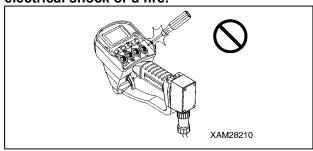

Fig. 4-224

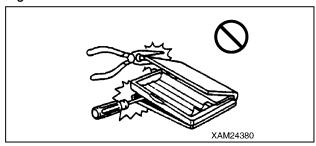

Fig. 4-225

Holding the Transmitter

WARNING!

• The Transmitter is designed for one hand controls in general.

Refer to the figure for basic usage of the Transmitter.

Levers and buttons can be manipulated by the thumb, while the Accelerator lever can be triggered by the forefinger.

Other fingers should grab the grip to hold the Transmitter.

Always manipulate levers and switches by fingers.

Do not attempt to pick them by a sharp edge or such for manipulation. It may make an opening in the Transmitter which allows water to enter inside and brings its troubles or failures and cause a serious hazard.

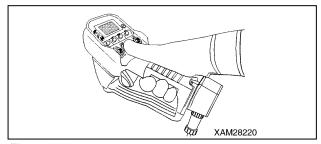

Fig. 4-226

Fig. 4-227

No Water Washing

WARNING!

- Always keep the Transmitter unsoiled, and clean it when necessary. Oil or mud on surface may cause mis-operation by slipping hands, which may result a serious hazard.
- Do not attempt water-wash the Transmitter, in any event.
 It allows water to enter inside and brings its troubles or failures and cause a serious hazard.
- Scrub the Transmitter and Receiver with a wet cloth from water or diluted detergent to remove the dart.

Avoid alkaline or alcoholic cleaners or sprayer cleaners which deteriorate plastics and produce cracks.

No Shock to the Transmitter

WARNING!

 During the Transmitter operations, always use a hook belt ① to prevent the unexpected drop of it.

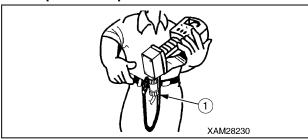

Fig. 4-228

- Always avoid an impact on the Transmitter, such as hitting it to any object.
 It may result a damage to the enclosure or internal components which may cause a failure or malfunction and brings electrical shock or other serious hazard.
- In the event of such damages, remove all the batteries from the Transmitter and send us or to our sales service agency.
 Use of such a damaged Transmitter will result in mis-operation and extend to electrical shock or other serious hazard.

Fig. 4-229

Precaution for Operations in Cold Seasons

WARNING!

 Avoid the use of the Transmitter in a condition where the ambient temperature makes sudden change or becomes extremely low (-10°C or below) or cold air directly blows.

Sudden change in temperature may cause dew formation inside the Transmitter and which causes failure or malfunction and leads to a serious hazard.

 In the winter times, allow sufficient idling prior to starting crane operations. In the winter, due to the low temperature, hydraulic fluid has higher viscosity. Such condition may result in a delay of functions in crane operations.

Fig. 4-230

- Keep the Transmitter away from conditions as below for its storage, where the Transmitter enclosure may deform or discolour, or internal components may be damaged to bring malfunctions and a serious hazard:
- Extremely low temperature (-20°C or below) or direct cold air blow.
- · Direct sun ray.

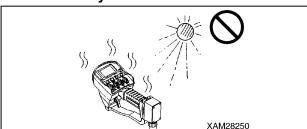

Fig. 4-231

- Adjacent to warm air outlets of vehicles.
- · Adjacent to housing heating system.
- · High humidity.

Precautions for Handling of Connection Cable

WARNING! Do not attempt to hang the Transmitter by the connection cable and fling it around, or bend the cable or thread on it. Such poor handling will damage the internal wires or produce other failures.

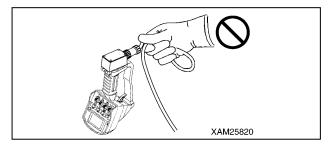

Fig. 4-232

4-90 12/2022 MC305CB-3

Precautions for Crane Operation - before Starting Crane Operation

Inspection Prior to Starting the Motor

WARNING! At the beginning of the day's operation, perform the opening inspection as specified for this machine, prior to starting the motor.

Serious injury or death may arise when these inspections are neglected.

Any failure detected at the inspection must be properly corrected.

Safety Measures for Starting Motor

WARNING!

 Ensure that nobody is around the Crane, or no obstacles, at starting the motor.

Inspection Prior to Turn on the Transmitter

WARNING!

- Check for any dirt, damage or cracks in the enclosure, control levers, operation buttons, or LCD screen.
- Ensure that the Transmitter's control levers, operation buttons and the Accelerator lever move smoothly and properly.
- Check the connection cable for damage or crack when the Transmitter is in use.

Inspection after Turning on the Transmitter

WARNING! Ensure that LCD screen of the Transmitter provides correct indications.

Switch to each operation mode, i.e.
 CRANE MODE and OUTRIGGER MODE,
 then check that LCD screen displays
 proper indications when each lever and
 button is manipulated. Further, verify the
 each applicable value of load in the
 Transmitter is identical to that of the
 Moment limiter display.

Inspection Prior to Turn on the Receiver

WARNING!

- Check for any dirt, damage or cracks in the Receiver's Control box, Main switch, Monitor display, Antenna and such.
- Ensure that the Receiver's Main switch moves smoothly and properly.

Function Check of Outrigger Mode by the Transmitter and Notices for Operation

WARNING!

- Switch the operation mode to the "OUTRIGGER MODE" and confirm that the mode is switched correctly.
- Activate "Start/Reset button" to assure that the motor correctly starts.
- Activate "Stop/EMO button to assure the motor correctly stops.
- Operate the outrigger control switches to assure that the corresponding outrigger works correctly.
- Check that the position pins for outriggers and retainers are securely fixed.

Function Check of Crane Mode by the Transmitter and Notices for Operation

WARNING!

- Before switching the operation mode to "CRANE MODE" always make all the outriggers extended and securely contacted on the ground.
- Switch the operation mode to the "CRANE MODE" and confirm that the mode is switched correctly.
- Activate levers for crane operations and assure that the Crane functions correctly.
- Always refer to the portable rated total load chart and avoid over-loaded operations.
- Activate the control levers and Accelerator lever of the Transmitter slowly in any time.

Precautions for Crane Operation

- Terminating the Operation

Precautions for Terminating the Operation by the Transmitter

WARNING!

- Before stowing the boom, switch the operation mode to "CRANE MODE" and confirm that the mode is switched correctly.
- Before stowing the outriggers, ensure that the boom and the hook is stowed in the correct positions.
- Before stowing the outriggers, switch the operation mode to "OUTRIGGER MODE" and confirm that the mode is switched correctly.
- When all the operation by the Transmitter is complete, always turn OFF the power of both the Transmitter and Receiver.
- On no condition, Transmitter will be ON unless the Crane is in operation, otherwise, unexpected touch or contact of operation levers or buttons of the Transmitter to any other object may cause un-desired motion of the Crane and a serious accident such as tipping or collision may occur.
- Where it is required to turn ON the Transmitter for the purpose of inspecting it or such, always keep the Receiver OFF and stop the motor, as well.

REMOTE CONTROL SYSTEM FEATURES

This system is designed principally for the following purposes:

This Interactive Remote Control System includes both Transmitter and Receiver which facilitate remote control of the Crane which is purchased with this device.

This Interactive Remote Control System provides an operation of the Crane at the most convenient place away from it within a range of the length of the connection cable. In addition, its LCD screen indicates "rated total load", "Actual Load" and "Load factor (by a bar chart)", which ensures proper operation based on these information.

CAUTION: The remote control system provides the following safety functions:

- Abnormal Signal Detector Circuit
 When the Main switch of the Receiver is
 turned ON this circuit checks the dispatch
 of Crane operation signals for 3 to 4
 seconds. Thus, the Crane will not be
 immediately ready for operations.
 When dispatch of any crane operation
 signals are noticed, power will be
 automatically OFF and the Crane stops.
 For resume, push the Reset button of the
 Transmitter.
- Automatic Power OFF Circuit
 Power of the Transmitter will be
 automatically OFF when the remote
 control of crane operations is
 discontinued for the specific time.
 For resume, push the Power switch of the
 Transmitter to turn ON.
- Voltage Drop Limiter (for the Receiver)
 The Receiver will be automatically shut down in the event where the voltage of the battery drops below DC 7 volts.

 This prevents malfunctions of the Crane due to voltage drop and the operation will resume automatically when the voltage is restored to DC 7 volts or higher.

4-92 12/2022 MC305CB-3

Transmitter

The Transmitter is equipped with LCD screen (1), Six control buttons (2), Four operation levers (3), Accelerator lever (4), Grip (5) and Connection cable (6).

The Transmitter sends signals for crane operations to the Receiver through the connection cable so that remote operation of the Crane can be carried out. In addition, the Transmitter collects the load data from the Moment limiter of the Crane through the cable, which are displayed in the LCD screen as "rated total load", "Actual load" and "Load factor (by a bar chart)".

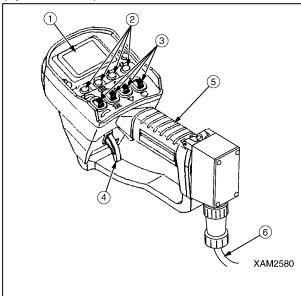

Fig. 4-233

Receiver

The Receiver which is installed in the Crane equips with Control box (1), Main switch (2), Monitor display (3), and Receptacle (4), etc. The Receiver receives operation signals from the Transmitter through the connection cable which control the Crane.

Further, the load data from the Moment limiter of the Crane are delivered to the Transmitter through the cable.

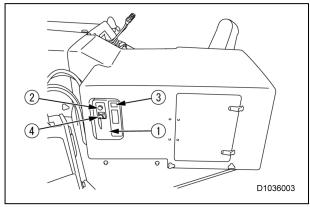

Fig. 4-234

Functions of Remote Control System

- The Transmitter allows one hand operation, which enables craning works, such as holding the load by the other hand or slinging, by one person.
- The Accelerator lever facilitates the control of the Crane operation speed from stand-by condition to the maximum speed.
- The LCD screen of the Transmitter indicates operation status, such as "rated total load", "Actual load", "Load factor (by a bar chart)", "Speed control", "Outrigger setting" and so on, to provide easy confirmation.

In addition, the LCD screen of the Transmitter shows error messages in the event where the Transmitter has a failure, so that the detection and correction of the failure is promptly accomplished.

Still more, the voice massages will notify the Transmitter conditions or warning alerts.

- Depend on the operation requirement, manual operation on the console of the Crane is also available, in addition to handling by the Transmitter.
- The connection by the cable between the Transmitter and Receiver allows secure communication between both.

REMOTE CONTROL SYSTEM COMPONENTS

Transmitter

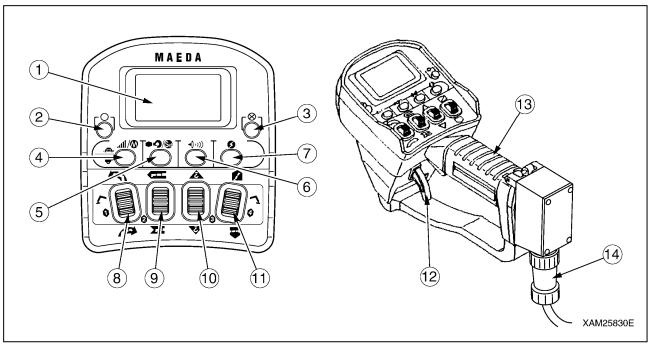

Fig. 4-235

4-94 12/2022 MC305CB-3

LCD Screen

The LCD screen displays the status of the Transmitter in operation, the established values for each mode, or error messages by symbols, comments or signs.

Start/Reset Button

This button resets the "Emergency Stop" and "Abnormal Signal Detect" conditions.

Fig. 4-236

Stop/EMO Button

In an emergency event where the Crane does not stop by normal operations, or such, this button provides the forced stop function.

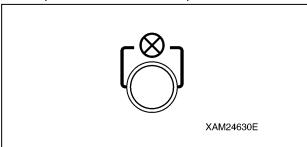

Fig. 4-237

Speed/Mode Button

This button also provides two usages as below:

- During crane operations, to push this button decelerates the operation speed.
- During the crane operation is in a pause, this button provides the selection of the Transmitter operation modes.

The current active mode will be displayed in the LCD screen.

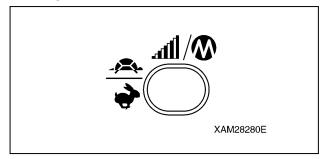

Fig. 4-238

Hook Stow/Setting Button

This button also serves two usages as below:

- To push this button automatically stows the hook.
- For each of the setting of the modes, use this button to fix to one of the choice from the menu in the LCD screen.

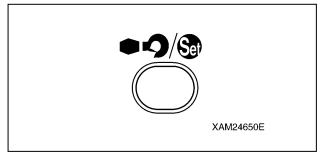

Fig. 4-239

Horn Button

Push this button to toot the horn.

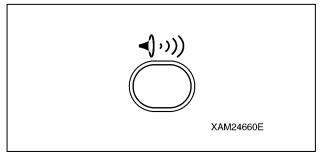

Fig. 4-240

Power Switch

To push this button switches ON and OFF the power of the Transmitter. Each push will turn ON or OFF alternately.

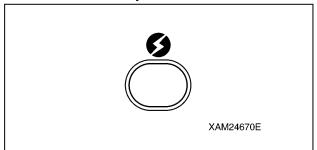

Fig. 4-241

Slewing/No.1 Outrigger Operation Lever

This operation lever functions in two ways as below:

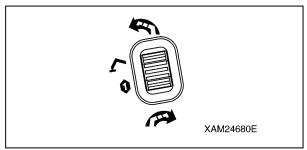

Fig. 4-242

- 1. In the CRANE MODE, this lever controls slew of the Crane structure:
 - Counterclockwise (left): Push the upper end of the lever.
 - Neutral: Release your finger from the lever.
 - Clockwise (right): Push the lower end of
- the lever.

 2. In the OUTRIGGER MODE, this lever
- controls extension (installation) and retraction (stowing) of either only No.1 or all of the outriggers at once:
 - Retraction (stowing): Push the upper

end of the lever.

• Neutral: Release your

finger from the

lever.

 Extension (installation): Push the lower end of the lever.

Boom Telescoping/No.2 Outrigger Operation Lever

This operation lever functions in two ways as below:

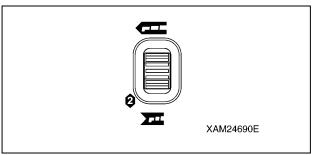

Fig. 4-243

- 1. In the CRANE MODE, this lever controls the telescopic boom length:
 - Boom extension: Push the upper end of the lever.
 - Neutral: Release your finger from the lever.
 - Boom retraction: Push the lower end of the lever.
- In the OUTRIGGER MODE, this lever controls extension (installation) and retraction (stowing) of either only No.2 or all of the outriggers at once:
 - Retraction (stowing): Push the upper

end of the lever.

• Neutral: Release your

finger from the

lever.

• Extension (installation): Push the lower

end of the lever.

4-96 12/2022 MC305CB-3

Hook Raising and Lowering/No.3 Outrigger Operation Lever

This operation lever functions in three ways as below:

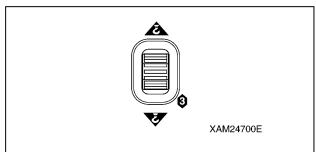

Fig. 4-244

1. In the CRANE MODE, this lever controls raising and lowering the hook:

Hook raising: Push the lower end of

the lever.

• Neutral: Release your finger from

the lever.

• Hook Lowering: Push the upper end of

the lever.

2. In the OUTRIGGER MODE, this lever controls extension (installation) and retraction (stowing) of either only No.3 or all of the outriggers at once:

• Retraction (Stowing): Push the upper

end of the lever.

• Neutral: Release your

finger from the

lever.

• Extension (installation): Push the lower

end of the lever.

3. In the A MODE, this lever is used as a cursor key by "▲ and ▼".

Boom Derricking/No.4 Outrigger Operation Lever

This operation lever functions in two ways as below:

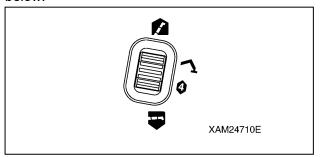

Fig. 4-245

1. In the CRANE MODE, this lever controls the boom derrick angle:

• Boom raising: Push the lower end of

the lever.

Neutral: Release your finger from

the lever.

• Boom lowering: Push the upper end of

the lever.

 In the OUTRIGGER MODE, this lever controls extension (installation) and retraction (stowing) of either only No.4 or all of the outriggers at once:

Retraction (stowing): Push the upper

end of the lever.

Neutral: Release your

finger from the

lever.

• Extension (installation): Push the lower

end of the lever.

Accelerator Lever

The Accelerator lever controls the flow rate of the control valves and the motor speed or output.

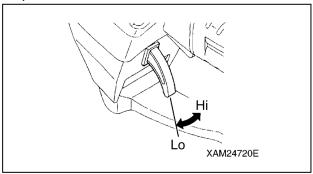

Fig. 4-246

- Lo: Release your finger from the Accelerator lever.
- Hi: Squeeze the accelerator lever to the full.

NOTICE:

- The Accelerator lever itself cannot control either flow rate of the control valves or the motor speed when it is manipulated alone. In the condition that any of the other operation levers are also used, the Accelerator lever launches specified operation of the Crane in the idling state of the motor, when it is manipulated, then, the motor speeds up by further manipulation of it; the crane operation turns to be faster, accordingly.
- The Accelerator lever does not control outriggers.
- The acceleration rate is always indicated in the right part of the LCD screen during crane operations. (See the figure.)

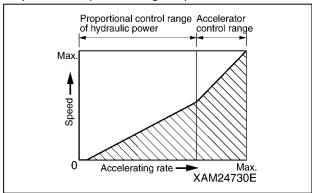

Fig. 4-247

Grip

The Transmitter is designed for one hand controls in general. Levers and buttons can be manipulated by your thumb, while the accelerator lever can be triggered by your forefinger. Other fingers should grab the grip to hold the Transmitter.

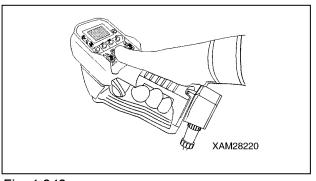

Fig. 4-248

Connection Cable

The connection cable is a cable between the Transmitter and Receiver.

Before and after the operation, always check this connection cable for any crack or damage, or bent. In addition, check the receptacle for any damage.

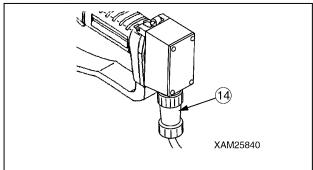

Fig. 4-249

4-98 12/2022 MC305CB-3

Storage Case

The Storage case is a compact bag for protection of the Transmitter.

Before putting it into this case, ensure that the power of the Transmitter is OFF.

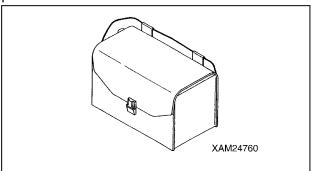

Fig. 4-250

Hook Belt

During the operation, this belt prevents the Transmitter from falling down to the ground, when the operator drops it by mistake. Hook one end of the hook belt (16) to the Transmitter and attach another end to the operator's waist belt, or such.

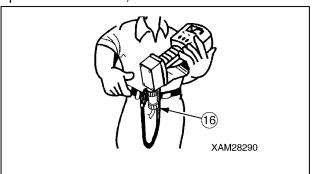

Fig. 4-251

Receiver Components

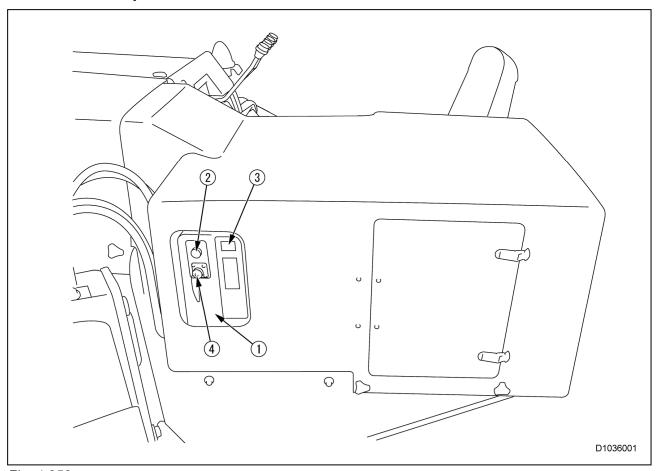

Fig. 4-252

- 1 Control Box
- 2 Main Switch

- 3 Monitor Display 4 Receptacle

4-100 12/2022 MC305CB-3

Control Box

The Control box contains the receiver devices and control devices.

Never attempt to dismantle this Control box.

Main Switch

The Main switch is a toggle switch to power ON or OFF the Receiver

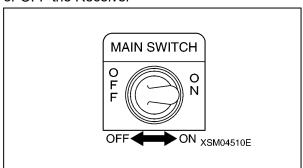

Fig. 4-253

- ON: Turn the toggle to ON to start the Receiver.
- OFF: Turn the toggle to OFF to terminate the Receiver.

CAUTION:

- Before starting the machine, always turn this Main switch of the Receiver to OFF.
- Where the remote control is not in use, always turn the main switch of the Receiver to OFF.

Monitor Display

In the event that the abnormal signal detector of the controller serves, the Monitor display indicates error codes.

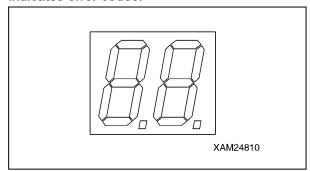

Fig. 4-254

CAUTION: In the event that the monitor display (3) indicates an error code, settle the error as follows:

1. Push the Reset button of the Transmitter.

- When the practice as above 1. results another error code, once turn the Receiver OFF, then start it again.
- 3. When the practice as above 2. results further error code, it is suspected that the Transmitter or Receiver has faults; contact us or our sales service agency.

For more information on error codes, see "TROUBLESHOOTING" on page 5-71.

Receptacle

Connect the connection cable from the Transmitter, here.

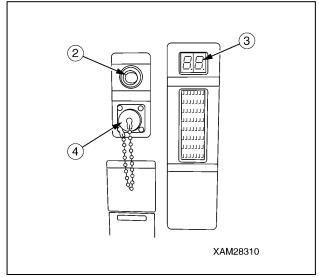

Fig. 4-255

CAUTION:

- Before attaching the connection cable to the receptacle (4), always confirm that the Main switch is in the OFF position.
 After the insertion, secure the plug by the screw.
- Always apply the water proof cap while the remote control is not in use.
- In the condition where the remote control is not provided, this receptacle (4) is incompetent. Always keep the water proof cap attached.

Fuse in the Receiver

CAUTION:

- For any tests or replacement of a fuse, always turn OFF the Starter switch of the Control box, before removing it.
- The fuse must be replaced with the same type of grass tube fuses, and of the same rating.

CAUTION: A fuse is inserted in the (+) line of the main power supply of the Receiver as a protective circuit of internal devices and prevents circuits from burnt.

- A grass tube fuse is employed. In the event where the fuse is corroded and shows white rust, or when a loose condition is recognised, always replace it with a new one.
- When the fuse is blown, never fail to examine the circuit for the cause and repair it before replace the fuse.
- The fuse must be replaced with the same type of grass tube fuses, and of the same rating.

The fuse is placed inside the Receiver. Test and replacement of the fuse shall be practiced as follows:

- Use the following hand tools:
- A screw driver (Philips)
- Jewelers screw driver set (Slotted)

Removal of the Fuse

- 1. See "Removing Rear Cover" on page 5-19 and remove the rear cover.
- 2. Unfasten eight of screws (4) and take away the cover of the Receiver (3).

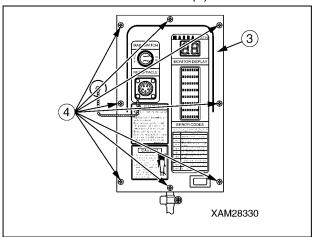

Fig. 4-256

- 3. Extract three of connectors (6) in the first PCB (5).
- 4. Unfasten six of screws (7) and remove the first PCB (5).

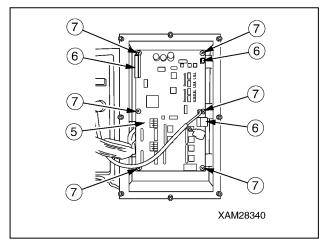

Fig. 4-257

4-102 12/2022 MC305CB-3

5. With a jeweler's driver (A) to pull out the fuse (8) from its clips, then examine it.

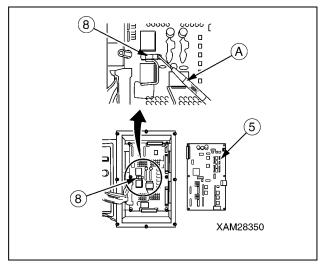

Fig. 4-258

- 6. Insert a new fuse or the examined fuse to where the one was.
- 7. See "Installing Rear Cover" on page 5-19 and install the rear cover.

Insertion of a Fuse

After the fuse is examined or replaced, restore the Receiver in the reverse practice of the removal.

CAUTION:

- When the three connectors (6) of the first PCB (5) is inserted again, secure them and avoid any loose conditions.
- Care should be exercised so that the cover (3) of the Receiver will not catch wires when it is attached back.

[Fuse class]

Type: Grass tube fuse

Rating: 15A

MODE SETTING OF THE TRANSMITTER

This device provides the "A MODE" in which the initial values of the Transmitter are established, the "OUTRIGGER MODE" in which the outriggers are set or stowed, and the "CRANE MODE" where the Crane is operated. This device is designed to switch to the applicable mode for the operation by the Transmitter.

A Mode

WARNING!

- Before entering into A MODE, always turn the main switch of the Receiver to the OFF position.
- Before the setting of values for A MODE, ensure that "A MODE" is correctly indicated in the LCD screen. Otherwise, un-expected motion of the Crane may result a serious accident, due to entry of values in the other mode, by mistake.

Opening A Mode Screen

Push the Speed/Mode button and Power switch jointly for 2 seconds. A message as "A MODE" appears in the LCD screen for 2 seconds.

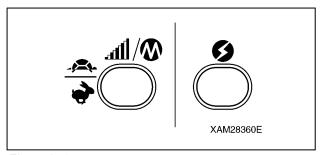

Fig. 4-259

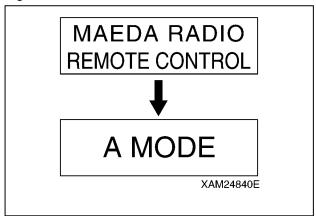

Fig. 4-260

Messages in the A Mode Screen

Refer to the figure for the A MODE screen:

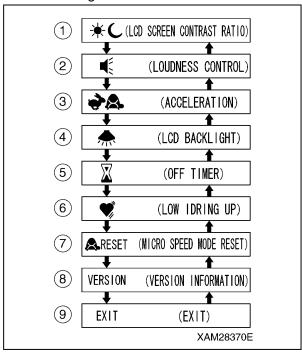

Fig. 4-261

It contains eight function items ((1) to (8)) and the Exit command (9).

NOTICE: In the A MODE, following applicable items are adjustable, as required:

- (1) "Contrast ratio" of LCD screen
- (2) "Loudness control"
- (3) The "Motor speed limit", controllable by the Accelerator lever.
- (4) LCD backlight, "Time for lighting, until the auto-cut".
- (5) "Auto Shut-OFF time" of the Transmitter power.
- (6) "Low idling rate" of the motor.
 (Idling only while the crane operation levers are manipulated.)
- (7) Reset of "user values" by the speed set-up mode.
- (8) Version information of the Transmitter firmware.

To switch the function item to another, or to change the setting value of the function, use, the Hook raising and lowering lever.

Then, to fix the value in the function, push the hook Stow/Setting button.

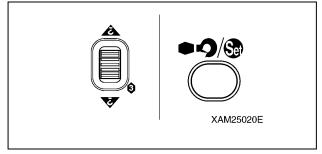

Fig. 4-262

LCD Screen Contrast Ratio

CAUTION: The LCD screen may be illegible when it is set too light or too dark, which may prevent correct operations. Adjust its contrast adequately for comfortable read. Adjust the contrast ratio of the LCD screen:

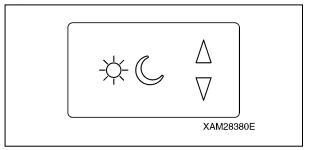

Fig. 4-263

- Shift the cursor (▲ or ▼) using the Hook raising and lowering lever.
 - To darken: Push the upper end of the Hook raising and lowering lever.
 - To lighten: Push the lower end of the Hook raising and lowering lever.
- When the desired contract is obtained, push the Hook stow/Setting button. The condition obtained in above 1. will be fixed and the display returns to the A MODE screen.

4-104 12/2022 MC305CB-3

Loudness Control (Available Only for Units with Optional Voice Message)

Adjust the volume of voice messages:

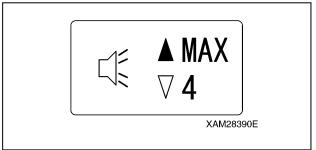

Fig. 4-264

 Shift the cursor (▲ or ▼) using the Hook raising and lowering lever and select the appropriate rate.

The volume adjust is by 6 steps, OFF, 1, 2, 3, 4, or ON.

The factory setting for this function is "MAX".

 When the desired volume is obtained, push the Hook stow/Setting button. The condition obtained in above 1. will be fixed and the display returns to the A MODE screen.

Acceleration

Adjust the motor speed limit, controllable by the Accelerator lever:

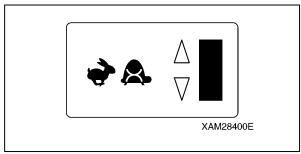

Fig. 4-265

- Shift the cursor (▲ or ▼) using the Hook raising and lowering lever. When all the bars lights, the speed limit is in maximum, otherwise, when the all are OFF, it is in minimum.
- 2. When the suitable rev limit is obtained, push the Hook stow/Setting button. The value obtained in above 1. will be fixed and the display returns to the A MODE screen.

LCD Backlight

Adjust the time to the auto-cut of the LCD backlight, after your finger is released from each of the lever.

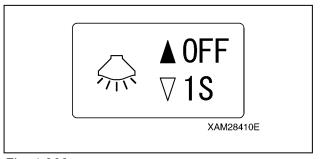

Fig. 4-266

 Shift the cursor (▲ or ▼) using the Hook raising and lowering lever and select the preferred time.

The elapse time adjust is by 4 steps, OFF, 1 sec., 3 sec., or 4 sec.

The factory setting for this function is "1 second".

 When the desired time is obtained, push the Hook stow/Setting button. The elapse time in above 1. will be fixed and the display returns to the A MODE screen.

Off Timer

Adjust the Auto shut-OFF time of the Transmitter power.

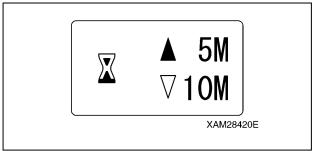

Fig. 4-267

 Shift the cursor (▲ or ▼) using the Hook raising and lowering lever and select the preferred time.

The Auto shut-OFF adjust is by 3 steps, 5 min., 10 min., or 15min.

The factory setting for this function is "5 minutes".

2. When the desired time is obtained, push the Hook stow/Setting button. The time in above 1. will be fixed and the display returns to the A MODE screen.

Low Idling Up

CAUTION: The low idling rate regulated by this idling-up function is valid only during crane operation levers are manipulated. Once the lever is released, the low idling rate is reset to the normal rate.

Adjust the motor's low idling rate to higher than the normal rate, during the crane operation levers are manipulated.

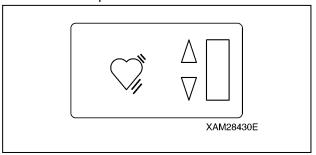

Fig. 4-268

- Shift the cursor (▲ or ▼) using the Hook raising and lowering lever. When all the bars light, the idling up is in the maximum, otherwise, when the all are OFF, the idling up is cancelled.
- 2. When the suitable idling up rate is obtained, push the Hook stow/Setting button. The value obtained in above 1. will be fixed and the display returns to the A MODE screen.

Micro Speed Mode Reset

Select either to reset or preserve the value at the micro speed mode.

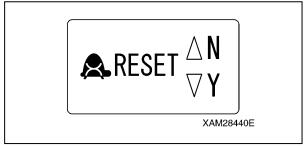

Fig. 4-269

 Shift the cursor (▲ or ▼) using the Hook raising and lowering lever and select "N" or "Y".

To reset, select "Y", otherwise, select N" to preserve.

 Whether reset or not is fixed, push the Hook stow/Setting button. The status in above 1. will be fixed and the display returns to the A MODE screen.

Version Information

Push the Hook stow/Setting button, so that version information of the Transmitter firmware is displayed. Another push of the same button makes the display returns to the A MODE screen.

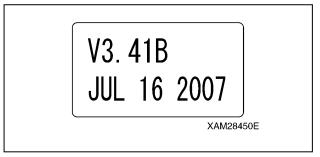

Fig. 4-270

Exit

CAUTION: Once setting-up the desired function items of all is completed, do not forget to practice the termination procedure, below. Otherwise, when this process is not correctly terminated, the latest setting will not become valid.

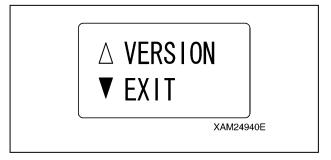

Fig. 4-271

- 1. Once setting-up the desired function items of all is completed, ensure that the display has returned to the A MODE screen.
- Shift the cursor (▲ or ▼) using the Hook raising and lowering lever and select "EXIT".
- Push the Hook stow/Setting button, which will terminate the "A MODE" and turn the mode to the "CRANE MODE".

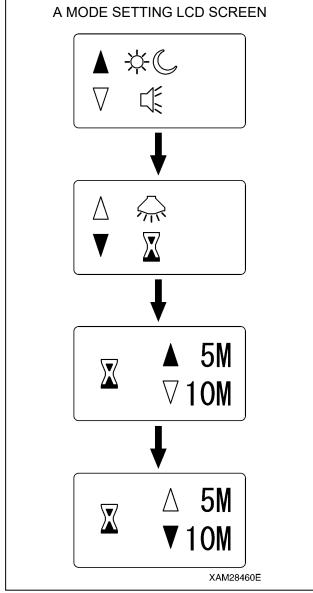

4-106 12/2022 MC305CB-3

An Example for Setting in the A Mode

Hereunder is a procedure to change the time of the "OFF timer", from "5 minutes" of the factory setting, to 10 minutes:

- Use the Hook raising and lowering lever and shift the cursor (▲ or ▼) to the side of the function item to change.
- When the cursor comes to the side of the "OFF timer", push the Hook stow/Setting button.
 - Now, the "OFF timer" is selected and the cursor (\blacktriangle) appears next to "5 minutes", as the current value.
- Use the Hook raising and lowering lever so that the cursor (▼) comes to the side of "10 minutes", then push the Hook stow/Setting button.

Now, the "OFF timer" setting is 10 minutes.

 Shift the cursor (▲ or ▼) using the Hook raising and lowering lever and select "EXIT", then push the Hook stow/Setting button.

Now the mode exits from the "A MODE" and is turned to the "CRANE MODE".

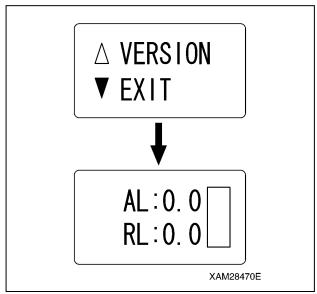

Fig. 4-273

CAUTION:

- Once setting-up the desired function item is completed, do not forget to practice the termination procedure, above. Otherwise, when this process is not correctly terminated, the latest setting will not be valid.
- Change of the other function item setting is available by the same procedure. In such event, correctly exit from the A MODE, without fail.

Fig. 4-272

Procedure in the Operation Mode

CAUTION: When the Main switch of the Receiver is turned ON, its abnormal signal detector automatically starts, first. Please allow it for 3 to 4 seconds, without using any levers, buttons and the Accelerator lever.

NOTICE:

- For changes between the modes, always turn OFF the power, once, then push the Power button again to power ON.
- While using a mode other than the "CRANE MODE", when you turn OFF the power by the Power switch and turn it ON, again (i.e., you keep waiting for 2 seconds or more), the mode is automatically set to "CRANE MODE". When you want to continue the operation in the previous mode, call the appropriate mode, again.

Call Out Crane Mode

 Push the Power button to turn ON the Transmitter.

The "Crane mark" is displayed in the LCD screen for 2 seconds or around.

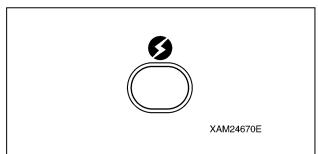

Fig. 4-274

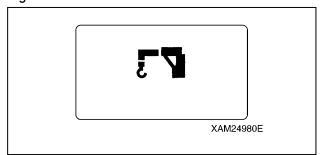

Fig. 4-275

NOTICE: In case that the power is already ON, once turn OFF, and then push the Power button again for power ON.

 When the "Crane mark" in the LCD screen disappears in 2 seconds, the "CRANE MODE" is automatically called out.

Fig. 4-276

Call Out Outrigger Mode

NOTICE: The OUTRIGGER MODE consists of "Extension mode "and "Ground setting mode". Use respective modes as shown below:

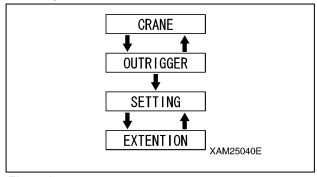

Fig. 4-277

 Push the Power button to turn ON the Transmitter.

The "Crane mark" is displayed in the LCD screen for 2 seconds around.

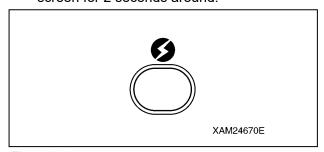

Fig. 4-278

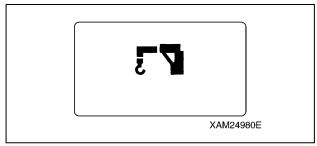

Fig. 4-279

NOTICE: In case that the power is already ON, once turn OFF, and then push the Power button again for power ON.

4-108 12/2022 MC305CB-3

 While the "Crane mark" is shown in the LCD screen (for approx. 2 seconds), push the Speed/Mode button for 2 seconds. The LCD provides the screen for selecting "CRANE MODE" or "OUTRIGGER MODE".

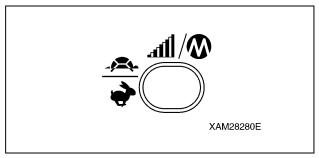

Fig. 4-280

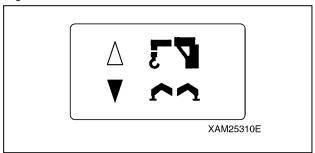

Fig. 4-281

 Use the Hook raising and lowering Lever and shift the cursor (▲ or ▼), and push the Hook stow/Setting button when the cursor points out the "OUTRIGGER".

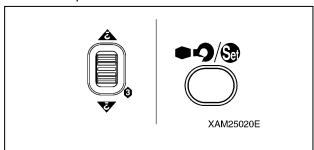

Fig. 4-282

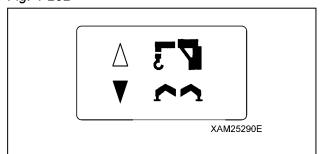

Fig. 4-283

 The operation mode is already switched to the "OUTRIGGER MODE", thus the "Outrigger mark" is exhibited.
 Soon after, it enters into "Ground setting mode", then the mark turns to "Ground setting ()".

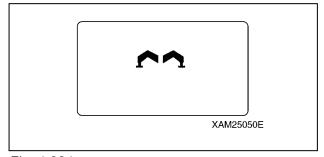

Fig. 4-284

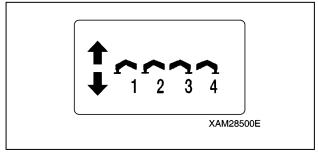

Fig. 4-285

5. To shift to "Extension mode", push the Speed/Mode button, while the LCD screen shows the "Ground setting mode". Then the mode is switched to "n"; the mark turns to "Extension ()".

Fig. 4-286

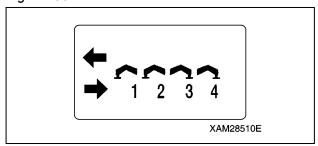

Fig. 4-287

NOTICE: Switching between "Outrigger Extension mode" and "Outrigger Ground setting mode" is alternately by each push of the Speed/Mode button.

REMOTE CONTROL SYSTEM VERIFICATIONS

Checking Before Starting the Machine

WARNING! Precautions shown in this section must be practiced prior to the day's work, without fail.

Serious injury or death may arise when these checking are neglected.

Further, see "Pre-Start Visible Checks" on page 5-22 for the checking of the crane structure.

In the event where any failure is revealed in such checking, repair it, or contact us or our sales service agency.

Checking before Turning ON the Transmitter

Perform the following inspections white the Transmitter power is OFF:

- Check the control levers, operation buttons, LCD screen, Accelerator lever and Grip for oily dirt or other soil.
- Scrub away the dirt with a clean cloth or such, when any.
- Check for foreign bodies such as particles of small stone or sand, caught into small openings in the vicinity of the control levers and/or Accelerator lever.
 - Remove such particles completely, when any. In the event where such particles are caught in the small openings in the vicinity of the control levers and/or acceleration lever, they may disturb correct operations and cause unexpected motion of the Crane which results a serious accident.
- Check for any cracks and/or damage to the Transmitter enclosure, or impairment to the rubber cover of the operation levers and control buttons.

Repair such cracks or damage immediately, when any.

Such cracks or damage may allow water to enter inside and brings troubles or failures to the Transmitter and cause a serious hazard.

- Check the smooth and correct actions of each of the operation lever and control button, and the Accelerator lever, as well as they smoothly return to the each neutral position when the finger is released.
 - Repair the operation levers, Accelerator lever and/or control button without delay, when any of them show an incorrect action.

Any failure to the operation levers,

Accelerator lever and/or control button brings troubles or failures and cause a serious hazard.

 Check the connection cable for any cracks, damages and/or bents, or loose connection or damage in the connector section.
 Repair or replace to a new cable, where such cracks, damages, or loose connection is present.

Checking after Turning on the Transmitter

At the moment when the Transmitter is powered ON, make checks on following items:

Verification of the LCD Screen Sign at Power-On

Push the Power switch to turn ON the Transmitter.

At this moment, confirm the mark as shown below, in the LCD screen.

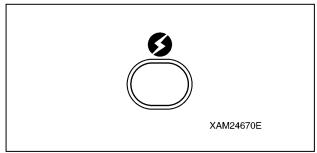

Fig. 4-288

NOTICE: In two seconds of this condition, it automatically enters into the "CRANE MODE".

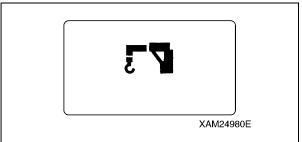

Fig. 4-289

4-110 12/2022 MC305CB-3

Verification of the LCD Screen Sign at the "Crane Mode"

 Compare the corresponding values in the Transmitter and Moment limiter, i.e. "AL" to "Actual Load", "RL" to "Rated Load", and the "bar chart (in the right)" to "Load Factor", to verify each is identical.

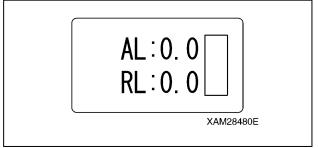

Fig. 4-290

- Manipulate each control button and verify that each indication in the LCD screen is correct.
- 3. Verify that "START" is correctly displayed in the LCD screen when the Start/Reset button is pushed.

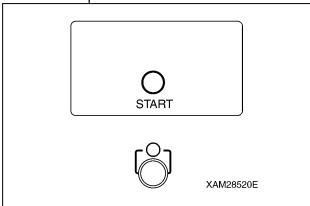

Fig. 4-291

4. Also, verify that "STOP" is correctly displayed in the LCD screen when the Stop/EMO button is pushed.

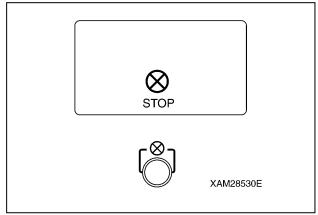

Fig. 4-292

Verification of the LCD Screen Sign at the "Outrigger Mode"

1. Push the Power switch to once turn OFF the Transmitter.

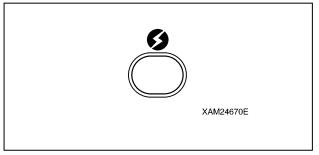

Fig. 4-293

2. Push the Power switch again to turn ON the Transmitter.

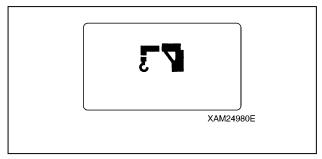

Fig. 4-294

 While the "Crane mark" is shown in the LCD screen (for approx. 2 seconds), push the Speed/Mode button for 2 seconds.

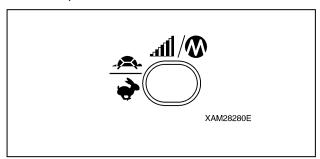

Fig. 4-295

 When the LCD provides the screen for selecting "CRANE MODE" or "OUTRIGGER MODE, use the Hook raising and lowering lever to set the cursor (▼) to the side of "Outrigger" then push the Hook stow/Setting button.

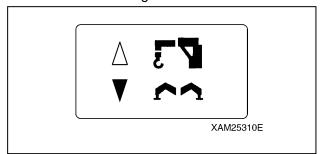

Fig. 4-296

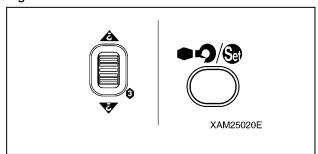

Fig. 4-297

Here, confirm that the "Outrigger mark" is exhibited, then it enters into the "Ground setting mode", soon after.

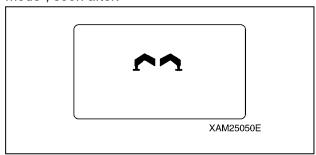

Fig. 4-298

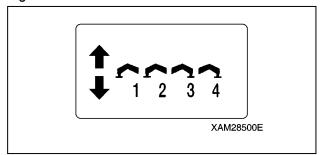

Fig. 4-299

 To shift to "Extension mode", push the Speed/Mode button, while the LCD screen shows the "Ground setting mode".
 Here, confirm that the "Outrigger Extension mode" is exhibited.

NOTICE: Switching between "Outrigger Extension mode" and "Outrigger Ground setting mode" is alternately by each push of the Speed/Mode button.

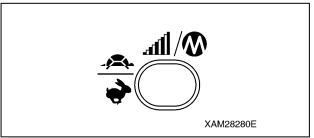

Fig. 4-300

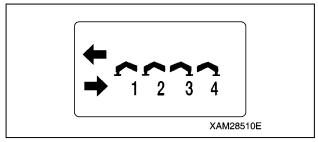

Fig. 4-301

Manipulate each operation lever and verify that each indication in the LCD screen is correct.

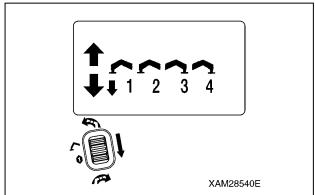

Fig. 4-302

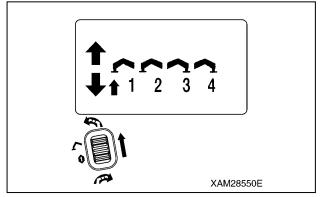

Fig. 4-303

4-112 12/2022 MC305CB-3

Checking Receiver

Perform the following inspections:

 Check the Control Box (1), Main Switch (2), Monitor display (3), and Receptacle (4) for oily dirt or other soil.
 Scrub away the dirt with a clean cloth or such, when any.

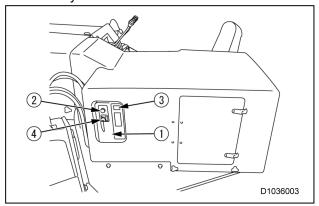

Fig. 4-304

 Check for any cracks and/or damages to the Control Box (1) or Monitor display (3).
 Repair such cracks or damage immediately, when any.
 Such cracks or damages may allow water to enter inside and brings troubles or failures to

the Receiver, then cause a serious hazard.

Check the Main switch (2) and Receptacle (4) for the loose conditions or damages.
 Repair immediately when such loose conditions or damages are found.
 Such loose conditions or damages may cause errors or faults of the Receiver, which results a serious hazard.

 Toggle the Main switch (2) to ON and OFF alternately to verify that power is correctly turned ON or OFF.

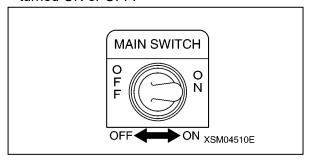

Fig. 4-305

 Turn ON the Transmitter, then toggle the Main switch (2) to ON, in addition, and confirm next that the two dots in the Monitor display as shown in the figure in the light blink.

NOTICE: In the condition that the Transmitter is not powered ON, or reception has an error, the Monitor display shows the error code, "E2", when the Receiver is turned ON.

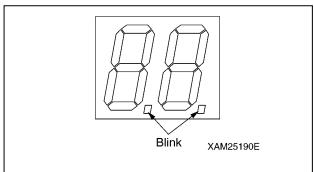

Fig. 4-306

Checking after Starting the Machine

WARNING! Precautions shown in this section must be practiced prior to the day's work, without fail.

Serious injury or death may arise when these inspections are neglected.

Further, see "Pre-Start Visible Checks" on page 5-22 for the checking of the crane structure.

Whenever any failures are revealed in such inspections, repair them, or contact us or our sales service agency.

Verification for the Machine Start and Stop

WARNING!

- Ensure that the boom and outriggers are in the stow position, entirely.
 In case where they are not in those positions, manipulate applicable levers of the Crane to make them stowed.
 Otherwise, the Transmitter operation may cause damages to the Crane or tipping that results serious injury or death.
- The Crane is inoperable in such event where the LCD screen in the Transmitter shows an error message or the Monitor display in the Receiver shows an error code.

Without fail, examine the cause of the error and perform appropriate service when any fault is identified, or contact us or our sales service agency.

Checking Machine Start Operation

- 1. Turn the starter switch on the machine to the "ON" position.
- 2. Next, push the Power switch of the Transmitter, to power ON.
- 3. Then turn ON the Main switch of the Receiver.
- 4. Here, push the Horn button and confirm that the horn toots.

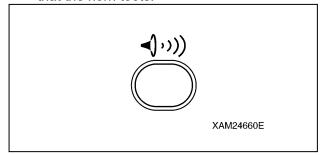

Fig. 4-307

- 5. Use the Start/Reset button to check that the machine starts properly.
- 6. Check whether the indication as "START" appears in the LCD screen, at that time.

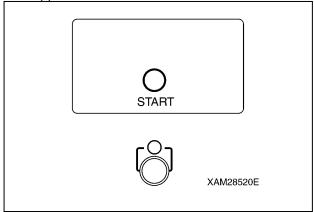

Fig. 4-308

CAUTION: Prior to start the machine, perform following practices in the Crane.

- 1. Set the Acceleration Lever to the medium speed (nearly middle in its stroke).
- Pull out the choke knob, unless otherwise the sufficient idling has been completed.
- 3. Return the chock knob to its initial position, when the machine starts.

4-114 12/2022 MC305CB-3

Checking Emergency Stop Operation

- When the motor is started as in the above [1], try the Stop/EMO button to confirm that the motor absolutely stops.
- Here, check whether the indication as "STOP" appears in the LCD screen.
 Further, confirm that the Monitor display in the Receiver shows the error code, "E1", at that time.

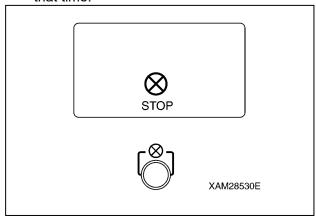

Fig. 4-309

Checking "Outrigger Mode" Operation WARNING!

- Ensure that the boom and outriggers are in the stow position, entirely.
 In case where they are not in that position, manipulate applicable levers of the Crane to make them stowed.
- Otherwise, the Transmitter operation may cause damages to the boom or outriggers or tipping the Crane that results serious injury or death.
- The Crane is inoperable in such event where the LCD screen in the Transmitter shows an error message or the Monitor display in the Receiver shows an error code.

Without fail, examine the cause of the error and perform appropriate service when any fault is identified, or contact us or our sales service agency.

- 1. Turn the starter switch on the machine to the "ON" position.
- Push the Power switch of the Transmitter to power ON.
- 3. Turn ON the Main switch of the Receiver.
- Switch the operation mode to the "OUTRIGGER MODE" and confirm that "Ground setting mode" is indicated in the LCD screen.

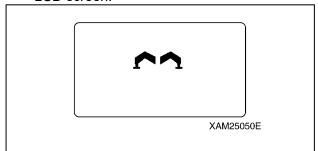

Fig. 4-310

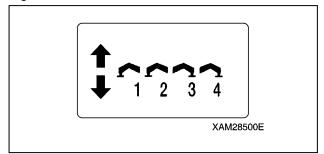

Fig. 4-311

 Push the Speed/Mode button.
 Here, confirm that the "Outrigger Extension mode" is exhibited.

Switching between "Outrigger Extension mode" and "Outrigger Ground setting mode" is alternately by each push of the Speed/Mode button.

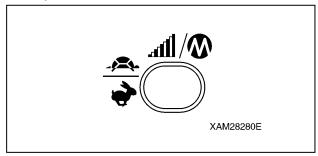

Fig. 4-312

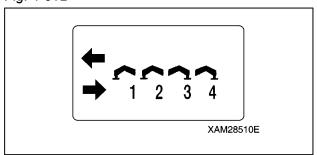

Fig. 4-313

- 6. Push the Start/Reset button and start the machine.
- 7. Use the Slewing/No.1 Outrigger operation lever, to the both "Extend (lower)" and "Retract (upper)" area, and check that the No. 1 outrigger follows the lever operation.

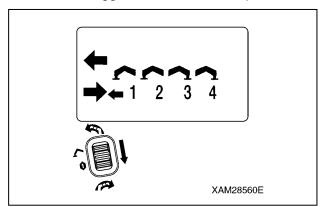

Fig. 4-314

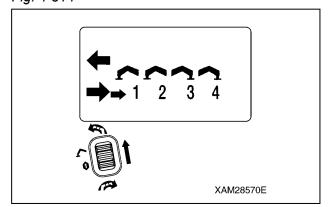

Fig. 4-315

8. During the control lever manipulation, slowly pull and release the Accelerator lever and confirm that the speed of outrigger action follows the acceleration ratio.

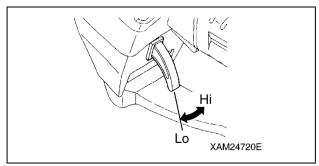

Fig. 4-316

- Try other outriggers, No. 2 to 4 by the same manipulation and confirm that the outriggers correctly respond to the lever control.
 - Lastly, manipulate all the outrigger operation levers to "Extend (lower)".
- 10. Use the Speed/Mode button to switch to the "Ground setting mode".

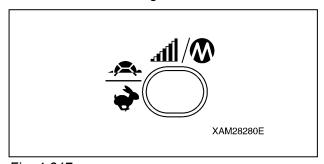

Fig. 4-317

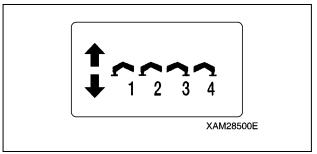

Fig. 4-318

4-116 12/2022 MC305CB-3

11. Use the Slewing/No.1 Outrigger operation lever, to the both "Extend (lower)" and "Retract (upper)" area, and check that the No. 1 outrigger follows the lever operation.

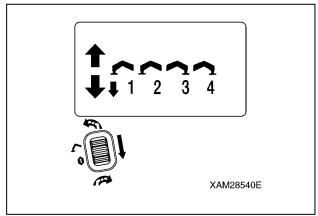

Fig. 4-319

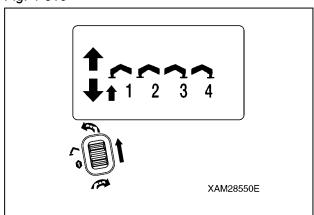

Fig. 4-320

12. During the control lever manipulation, slowly pull and release the Accelerator lever and confirm that the speed of outrigger action follows the acceleration ratio.

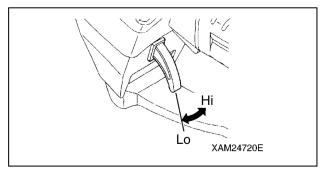

Fig. 4-321

 Try other outriggers, No. 2 to 4 by the same manipulation and confirm that the outriggers correctly respond to the lever control.

Checking "Crane Mode" Operation

WARNING!

- Ensure that all the outriggers are securely settled, before starting crane operations.
 Any crane operations where outriggers are improperly used cause the tip of the Crane or other serious accidents.
- The Crane is inoperable in such event where the LCD screen in the Transmitter shows an error message or the Monitor display in the Receiver shows an error code.

Without fail, examine the cause of the error and perform appropriate service when any fault is identified, or contact us or our sales service agency.

- 1. Turn the starter switch on the machine to the "ON" position.
- See "Before Crane Operations" on page 4-61 and "Crane Operation Posture" on page 4-63 to and configure the Crane as shown in the figure.

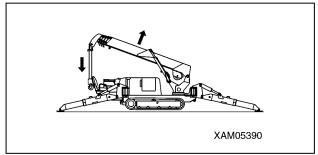

Fig. 4-322

- 3. Push the Power switch of the Transmitter to power ON.
- 4. Then turn ON the Main switch of the Receiver.

Enter into "CRANE MODE"; confirm that the indication as "CRANE MODE" is displayed in the LCD screen.

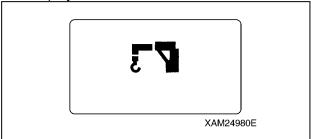

Fig. 4-323

Fig. 4-324

6. Use the Boom derricking lever to the both "Raise (upper)" and "Lower (lower)" area, pull the Accelerator lever and check that the boom follows the lever operation.

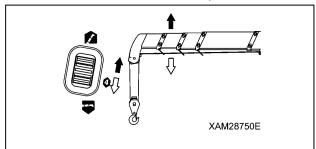

Fig. 4-325

7. Raise the boom to the sufficient angle (approximately 60 degree) by the Boom derricking lever, pushing to the "Raise (upper)" area.

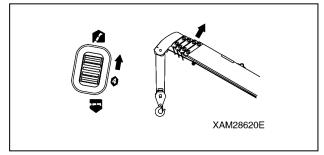

Fig. 4-326

 During the Hook raising and lowering lever manipulation, to the "Raise (upper)" and "Lower (lower)" area respectively, pull the Accelerator lever and check that the hook follows the lever operation.

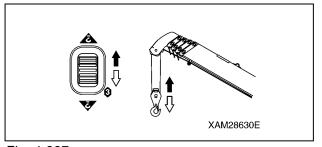

Fig. 4-327

Using the Hook raising and lowering lever to the "Lower (lower)" area, lower the hook as much as possible.

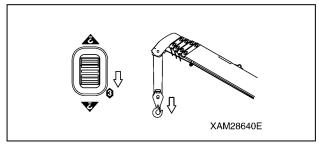

Fig. 4-328

10. During the Boom telescoping lever manipulation, to the "Extend (upper)" and "Retract (lower)" area respectively, pull the Accelerator lever and check that the boom follows the lever operation.

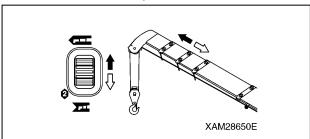

Fig. 4-329

11. Using the Hook raising and lowering lever to the "Raise (upper)" area, hoist the hook.

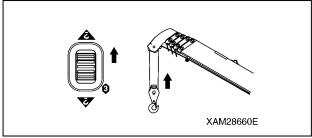

Fig. 4-330

12. During the Slewing lever manipulation, to the "Counterclockwise (upper)" and

"Clockwise (lower)" area respectively, pull the Accelerator lever and check that the Crane follows the lever operation. In addition, practice a slew around 360 degrees or more to check any abnormal conditions.

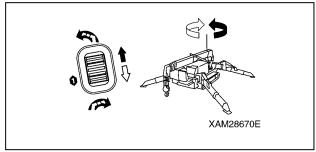

Fig. 4-331

13. During each control lever manipulation of 6. through 12., above, slowly pull and release the Accelerator lever and confirm that the speed of each action follows the acceleration ratio.

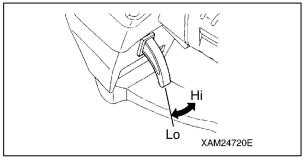

Fig. 4-332

14. During each control lever manipulation of 6. through 12., above, push the Speed/Mode button, then try both "Micro speed command" and "Enhanced speed command" and confirm the speed of each operation corresponds to respective controls of "Micro speed command" and "Enhanced speed command".

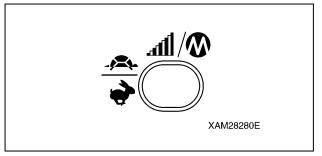

Fig. 4-333

15. Keep pushing the Hook Stow/Setting button and pull the Accelerator lever to verify the hook is stowed properly.

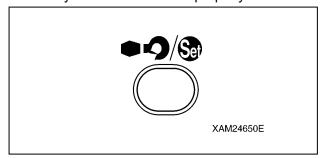

Fig. 4-334

REMOTE CONTROL OPERATION

WARNING!

- In no event, attempt to disassemble or modify the Transmitter or Receiver, which may cause an electrical shock or a fire.
- Avoid to make an impact to the Transmitter by dropping or hitting. A damaged part of the enclosure allows water to enter inside that brings its troubles or failures and cause a serious hazard, such as malfunction or electrical shock.
 - In such event of dropping and damage, contact us or our sales service agency.
- In no event, water-wash the Transmitter or Receiver; that allows water to enter inside and brings its troubles or failures and cause a serious hazard, such as malfunction or electrical shock.
- Both remote control operation and manual operation at a time are not allowed.
 That may cause the un-expected behaviour of the Crane and results a serious hazard. The Crane must be operated by only in either method. (Manual operation is not available, when the remote control is active.)
- Prior to start the remote control operations, always conduct inspections of both the Transmitter and Receiver, in accordance with "REMOTE CONTROL SYSTEM VERIFICATIONS" on page 4-110.

Cautions Before Operation

 So that dropping the Transmitter is prevented, hook one end of the hook belt (16) to the Transmitter and attach another end to the operator's waist belt, or such.

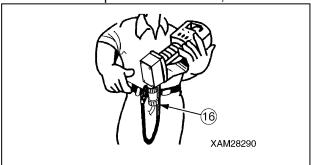

Fig. 4-335

- Always conduct inspections of both the Transmitter and Receiver, in accordance with "REMOTE CONTROL SYSTEM VERIFICATIONS" on page 4-110.
- Make sure that the receptacles (14) in the both ends of the connection cable are secured to both the Transmitter and Receiver, respectively.

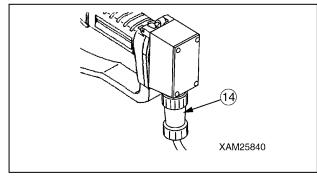

Fig. 4-336

NOTICE:

- When it is required to change the initial values of settings such as the contrast of the Transmitter LCD screen, the light, or the OFF timer, once switch to "A MODE" for adjustment.
- In the event that the remote control operation is discontinued for the length of the "Auto shut -OFF time" or more, during the crane operation, the Transmitter power will be automatically cut. To resume the remote control operation, turn ON the Transmitter and set each items for the operation mode, again.

4-120 12/2022 MC305CB-3

Operation in Outrigger Mode

WARNING!

- Check smooth and correct actions of each operation lever of the Transmitter, and they smoothly return to each neutral position when the finger is released.
- Each operation lever of the Transmitter will be blocked by its stopper when it is moved full. When it is blocked, do not attempt to push more, otherwise it may damage the Transmitter to cause its fault and results a serious accident.
- To toggle each operation lever to the opposite side, or to use another lever, always release the Accelerator lever, each time. Also, to operate the outrigger, manipulate the operation lever first, then pull the Accelerator lever. To stop the actuation of outriggers, release your finger from the Accelerator lever, first, then discharge the operation lever.
- Do not operate the outriggers while the acceleration lever is pulled.
 Operating the outriggers with the acceleration lever pulled may cause the outriggers to move suddenly, resulting in serious accidents such as the machine toppling.
- For the outrigger operations, always configure the Crane to the stow position.
 In the condition that the boom is raised or any load is craned, it may cause a serious accident, such as tipping of the Crane.
- For the outrigger operations, always ensure that the position pin of each outrigger is securely inserted. In the event where the pins are missing, the Crane may be tipped and it results in a serious hazard.
- For the installation of outriggers, always extend them first in the "Extension mode", then switch the mode to "Ground setting mode". Lift each outrigger equally and gradually, until the Crane is properly elevated. For the stowing of Outriggers, lower each outrigger equally and gradually, until the Crane is grounded in the "Ground setting mode", then switch to the "Extension mode" to retract them. Unless otherwise this order is followed, that may cause to tip the Crane and bring a serious accident.

- 1. Turn the starter switch on the machine to the "ON" position.
- 2. Push the Power switch of the Transmitter to power ON.

Confirm that the LCD screen shows the mark as the figure and the "CRANE MODE" is automatically provided.

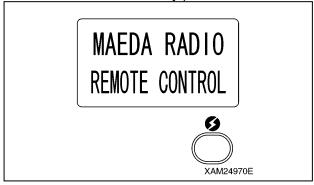

Fig. 4-337

3. Then turn ON the Main switch of the Receiver.

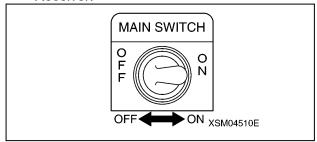

Fig. 4-338

NOTICE:

- When the Main switch of the Receiver is turned ON, the abnormal signal detector circuit works for 3 to 4 seconds. During this moment, the Crane is not ready for operations.
- This Crane equips four sets of outriggers and number labels (1) to (4) are appended on each. These labels correspond to the number of each operation lever in the Transmitter.

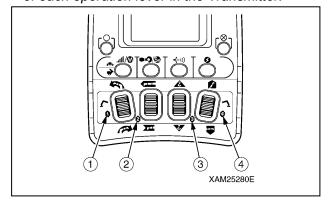

Fig. 4-339

Outrigger Setting

 In accordance with "Procedure in the Operation Mode" on page 4-108, enter into the "OUTRIGGER MODE".

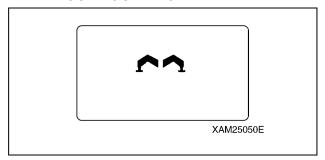

Fig. 4-340

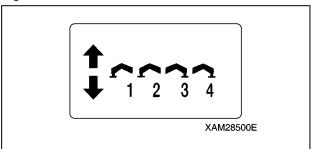

Fig. 4-341

 Push Speed/Mode button in the mode condition of above 1.
 The operation mode is switched to "Outrigger Extension mode".

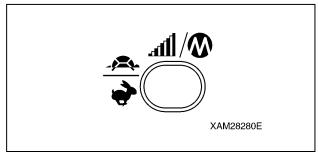

Fig. 4-342

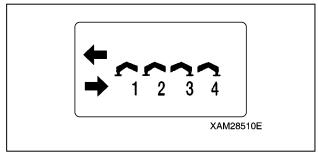

Fig. 4-343

3. Turn one of the outrigger operation levers to "Extend (lower)" and pull the Accelerator lever slowly.

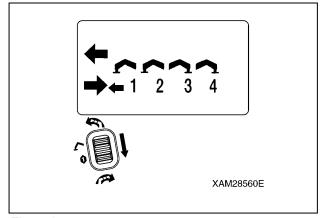

Fig. 4-344

4. When the outrigger is extended to the proper position, slowly release the accelerator lever, then release the outrigger operation lever to return to its neutral position.

NOTICE: Repeat the same process to the other three outriggers, so that all of the four outriggers are extended to the proper position.

 Push Speed/Mode button in the mode condition of above 4.
 The operation mode is switched to "Ground setting mode".

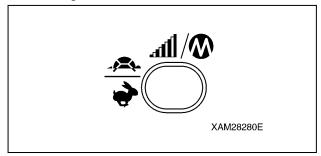

Fig. 4-345

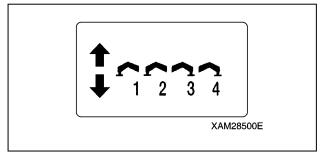

Fig. 4-346

Turn one of the outrigger operation levers to "Extend (lower)" and pull the Accelerator lever slowly.

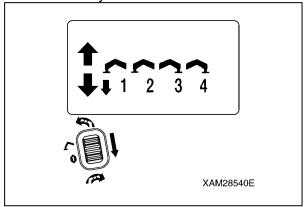

Fig. 4-347

NOTICE: Repeat the same process to the other three outriggers and lift all the four outriggers equally and gradually, so that the Crane is properly elevated.

7. When the Crane is elevated "approximately 50mm", slowly release the Accelerator lever, then release the outrigger operation lever to return to the neutral position.

Outrigger Stowage

 In accordance with "Procedure in the Operation Mode" on page 4-108, enter into the "OUTRIGGER MODE".

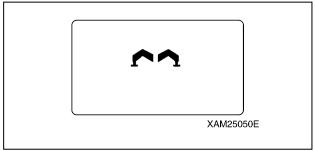

Fig. 4-348

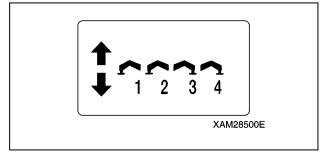

Fig. 4-349

Turn one of the outrigger operation levers to "Retract (upper)" and pull the Accelerator lever slowly.

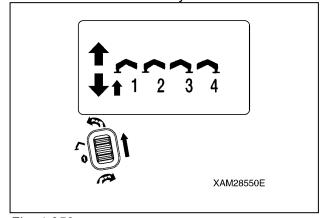

Fig. 4-350

 When the Crane touches the ground, slowly release the acceleration lever, then release the outrigger operation lever to return to its neutral position.

NOTICE:

- Repeat the same process to the other three outriggers and lower all the four outriggers equally and gradually, so that the Crane is grounded.
- After the Crane is grounded, lower all the four outriggers completely.
- Push Speed/Mode button in the mode condition of above 3.
 The operation mode is switched to "Outrigger Extension mode".

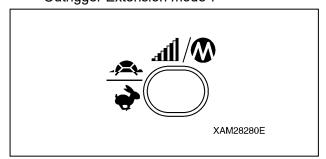

Fig. 4-351

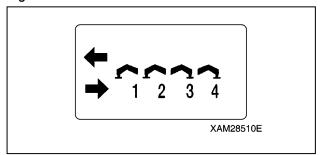

Fig. 4-352

Turn one of the outrigger operation levers to "Retract (upper)" and pull the Accelerator lever slowly.

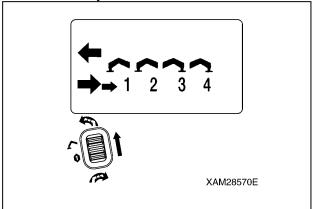

Fig. 4-353

6. When the outrigger is completely retracted, slowly release the Accelerator lever, then release the outrigger operation lever to return to its neutral position.

NOTICE: Repeat the same process to the other three outriggers to retract all the four outriggers completely and stow them to the proper position.

Operation in Crane Mode

WARNING!

- Ensure that all the outriggers are properly installed.
 - Where outriggers are improperly installed, it may result a serious hazard, such as a Crane tipping.
- During crane operations, always refer to the portable rated total load chart and avoid over-loaded operations. Operations in over-loaded conditions may damage or tip the Crane, which results a serious hazard.
- Check the smooth and correct actions of each operation lever of the Transmitter, and that they smoothly return to the each neutral position when the finger is released.
- Each operation lever of the Transmitter will be blocked by its stopper when it is moved full. When it is blocked, do not attempt to push more, otherwise it may damage the Transmitter and cause its fault; it may result a serious accident.

- To toggle each operation lever to the opposite side, or to use another lever, always release the Accelerator lever, each time. Also, to operate the Crane, manipulate the operation lever first, then pull the Acceleration lever, next. To stop the operation of the Crane, release your finger from the Accelerator lever, first, and next discharge the operation lever.
- Always actuate the Accelerator lever with caution to the acceleration rate.
 It must be properly controlled to keep the appropriate crane operation speed and avoid any abrupt motion. Such abrupt acceleration or deceleration especially while a load is hung will make a large impact to the Crane and may result a serious hazard such as Crane tipping or damage.
- During a load is hung, do not attempt to perform multiple operation at a time, the hook raising and the boom raising, for instance. That may cause abrupt change of the load condition and cause a serious hazard such as the Crane tipping or damage.
- 1. Turn the starter switch on the machine to the "ON" position.
- Push the Power switch of the Transmitter to power ON.
 Confirm that the LCD screen shows the

mark as the figure in the below and the "CRANE MODE" is automatically provided.

Fig. 4-354

4-124 12/2022 MC305CB-3

3. Then turn ON the Main switch of the Receiver.

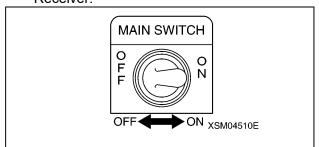

Fig. 4-355

NOTICE:

- When the main switch of the Receiver is turned ON, the abnormal signal detector circuit works for 3 to 4 seconds. During this moment, the Crane is not ready for operations.
- Four of the Crane operation levers are provided. Each controls the following operation, respectively.

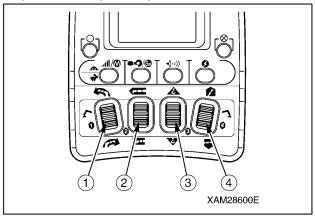

Fig. 4-356

- (1): Slewing (upper: counterclockwise (left), lower: clockwise (right))
- (2): Boom telescoping (upper: extend, lower: retract)
- (3): Hook raising and lowering (upper: raising, lower: lowering)
- (4): Boom derricking (upper: raising, lower: lowering)

Slewing Operation

WARNING! At the slewing operation, actuate the Accelerator lever carefully and always keep in low speed.

Also, actuate the Accelerator lever slowly and delicately to avoide abrupt slewing.

Such abrupt acceleration or deceleration especially while a load is hung will make a large impact to the Crane and may result a serious hazard such as Crane tipping or damage.

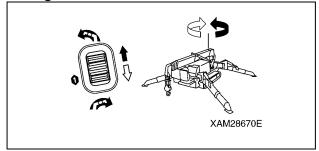

Fig. 4-357

Slew Clockwise (Right)

Push the Slewing/No.1 outrigger operation lever to "Clockwise (lower)", then pull the Accelerator lever slowly.

The boom slews clockwise (right), provided that you look down the Crane from the sky.

Slew Counterclockwise (Left)

Push the Slewing/No.1 outrigger operation lever to "Counterclockwise (upper)", then pull the Accelerator lever slowly.

The boom slews counterclockwise (left), provided that you look down the Crane from the sky.

Stop Slewing

Release the Accelerator lever slowly, then release the Slewing/No.1 outrigger operation lever to return it to its neutral position.

The boom stops slewing.

Boom Telescoping Operation

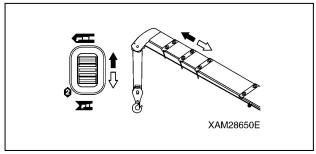

Fig. 4-358

Boom "Extending"

Push the Boom telescoping/No.2 outrigger operation lever to "Extend (upper)", then pull the Accelerator lever slowly.

The boom extends.

Boom "Retracting"

Push the Boom telescoping/No.2 outrigger operation lever to "Retract (lower)", then pull the Accelerator lever slowly.

The boom retracts.

Stop Telescoping

Release the Accelerator lever slowly, then next release the Boom telescoping/No.2 outrigger operation lever to return it to the neutral position.

The boom stops telescoping.

Hook Raising and Lowering Operation

WARNING!

- In the event of "Over-hoist alarming" or "Automatic cut out" during the hook raising operation, immediately suspend winding. Otherwise, it may cause a damage to the Crane, or the wire-cable is broken which result dropping off the hook or load; a serious accident may happen.
- Continuing the hook lowering in the condition that the load already reached the ground, the random wind of the wire-cable will happen. This may damage the wire cable or shorten its life badly. Further, there is some risk that the wire-cable may bite itself which prevents any more winching. During the hook lowering, always take good care not to cause such random wind.
- The hook is raised or lowered by the boom telescoping or boom derricking, as well.
 The same attention must be paid as the hook raising and lowering by the winch operation.

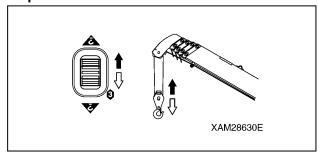

Fig. 4-359

Hook Raising

Push the Hook raising and lowering/No.2 outrigger operation lever to "Raise (upper)", then pull the Accelerator lever slowly. The hook starts to be raised.

Hook Lowering

Push the Hook raising and lowering/No.2 outrigger operation lever to "Lower (lower)", then pull the Accelerator lever slowly.

The hook starts to be lowered.

Stop Raising or Lowering

Release the Accelerator lever slowly, then release Hook raising and lowering/No.2 outrigger operation lever to return it to the neutral position.

The hook stops raising or lowering.

Boom Derricking Operation

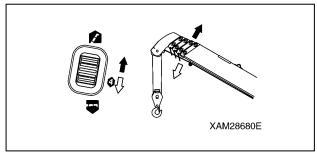

Fig. 4-360

Boom Raising

Push the Boom derricking/No.4 outrigger operation lever to "Raise (upper)", then pull the Accelerator lever slowly.

The boom is raised.

Boom Lowering

Push the Boom derricking/No.4 outrigger operation lever to "Lower (lower)", then pull the Accelerator lever slowly.

The boom is lowered.

Stop Boom Derricking

Release the Accelerator lever slowly, then release the Boom derricking/No.4 outrigger operation lever to return it to the neutral position.

The boom stops derricking.

4-126 12/2022 MC305CB-3

Automatic Hook Stow Function

CAUTION: This automatic hook stow function is not available in the "Micro Speed mode" or "Enhanced Speed mode".

To stow the hook, always cancel either the "Micro Speed mode" or "Enhanced Speed mode".

For details, see "Set-Up/Cancel Micro Speed and Enhanced Speed Mode" on page 4-127.

 Configure the boom to the travelling condition and push the Hook raising and lowering/No.2 outrigger operation lever to "Raise (upper)", then pull the Accelerator lever

Keep raising the hook until it touches to the over winding detector weight and automatically stops.

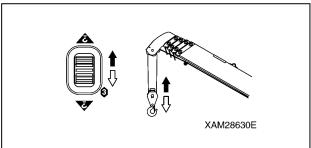

Fig. 4-361

 When the hook automatically stops, push the Hook stow/Setting button.
 LCD screen in the Transmitter displays "HOOK 1".

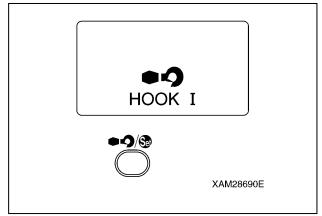

Fig. 4-362

 Keep pushing the Hook stow/Setting button, pull the Accelerator lever slowly.
 The hook (4) will be raised to the proper stow position.

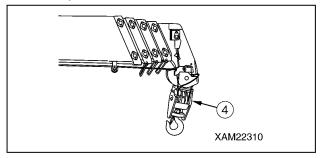

Fig. 4-363

NOTICE: This hook stowage operation is performed under the motor low-speed condition, regardless of the Accelerator lever rate.

4. When the hook (4) is settled to its position, release the Accelerator lever, then release your finger from the Hook stow/Setting button.

Set-Up/Cancel Micro Speed and Enhanced Speed Mode

When it is required to operate the Crane in low speed, use the Micro speed mode, which limits the maximum speed of the Crane and facilitates the smoother control in the low speed range. "Micro speed mode" is available by users' setting.

Contrary, when it is required to enhance the maximum speed of the Crane operation, the "Enhanced speed mode is also available.

NOTICE: "Micro speed mode" is valid only in the "CRANE MODE".

Setting the Micro or Enhanced Speed Mode

Push the Speed/Mode button.

Each push will forward the LCD screen indication as shown in the diagram, below: When the indicated mode fits your requirement, carry on the Crane operation in that condition.

Fig. 4-364

Cancel the Micro or Enhanced Speed Mode

Push the Speed/Mode button several times, until LCD screen indication attains the "Normal".

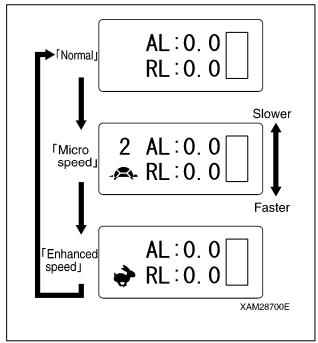

Fig. 4-365

Setting to the Micro Speed Mode

WARNING! Setting to the Micro speed mode requires actual crane operations with the machine running. Before starting the Micro speed mode setting, always ensure that nobody except on business is within the working area.

 Push the Speed/Mode button several times so that the LCD screen indicates the "Micro speed mode".

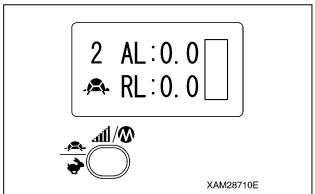

Fig. 4-366

 Push the Hook stow/Setting button for at least 2 seconds.
 Indication of "2" in the LCD screen is highlighted and it enters into the "Micro speed mode" setting screen. NOTICE: The "Micro speed mode" setting is available while the "2" in the LCD screen is high-lighted.

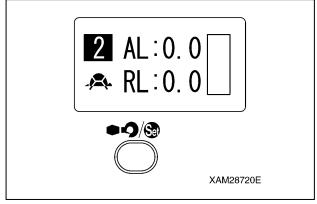

Fig. 4-367

 Push the operation lever to be adjusted and pull the Accelerator lever slowly.
 When the operation speed reaches the desired maximum speed push the Hook stow/Setting button.

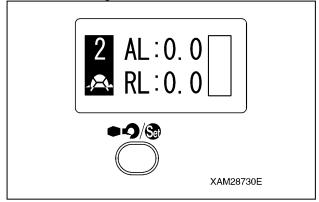

Fig. 4-368

NOTICE:

- Perform the same process to other operation levers, respectively.
- In case that you operate two or more levers at the same time for this setting, note that the Micro speed rate is established to the ratio of the fastest operation of all.
 - It is recommended that the Micro speed shall be set one by one of each operation lever
- No operation lever provides the Micro speed unless otherwise set to the Micro speed mode, beforehand

4-128 12/2022 MC305CB-3

4. When the settings for all the required operation levers are complete push the Speed/Mode button. Now the setting is established and the Micro speed mode is available.

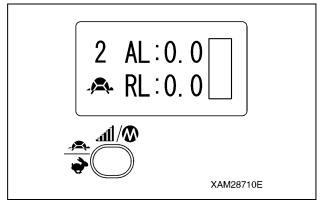

Fig. 4-369

Stop and Emergency Stop Procedure

WARNING!

- For any abnormalities in crane operations, push immediately the Stop/EMO button to stop the machine. Such cases include that the crane operation does not stop though you release your fingers from any of the operation levers or Accelerator lever, or the Crane starts the operation despite that no operation lever is manipulated.
- In such event of the emergency stop of the machine, turn OFF the power of the Transmitter and check the cause of the emergency, after the machine stops, and repair the failure.

Push the Stop/EMO button to stop the motor from the Transmitter or in case of emergency.

The machine stops, "STOP" is displayed on the Transmitter LCD, and the emergency stop indication is displayed on the machine monitor.

The "STOP" display and emergency stop indication are displayed until either the START/RESET button is pressed for at least one second or the power is turned off.

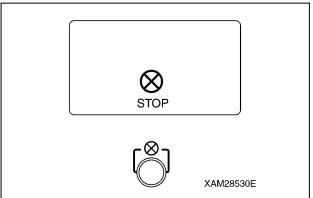

Fig. 4-370

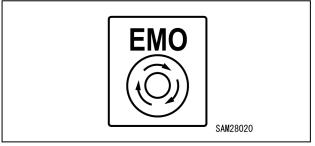

Fig. 4-371

Start and Reset Procedure

Start Procedure

To start the motor using the Transmitter, use the control lever.

The motor starts when the lever is operated.

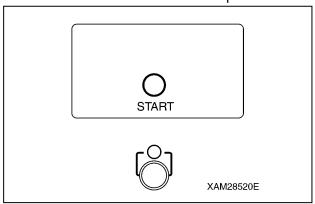

Fig. 4-372

Reset Procedure

To reset after an emergency stop or error signal detection, press the START/RESET button for at least one second.

NOTICE:

 If the emergency stop indication on the monitor does not clear, press the START/RESET button again for at least one second.

Checking after Crane Operation

WARNING!

- When the operation of the Crane is finished, always turn OFF the Transmitter and Receiver power.
- In no occasions except the Crane operations, power of the Transmitter shall not be turned ON.
 - That may cause an un-expected motion of the Crane and result a serious hazard, such that the Crane hit the other person or any object, or the Crane tips.
- When turning on the power to the Transmitter for maintenance or inspection work, turn the starter switch on the machine to the "OFF" position to shut off the power.
- 1. Enter into the "CRANE MODE" of the Transmitter operation mode.
- Use the operation levers and retract the boom to its shortest condition and lower it to the base position, then stow the hook.
- 3. Enter into the "OUTRIGGER MODE" of the Transmitter operation mode.
- Use the operation levers and stow all the outriggers so that the Crane is configured to the travelling mode.
- Turn both the starter switch on the machine and the Transmitter power to "OFF".
- 6. Shut down the power of the Receiver by turning its Main switch to the OFF position.
- 7. Maintain the Transmitter and Receiver as follows:
 - (1) Check operation levers and the Accelerator lever for any faults.
 - (2)Remove oil or other soil by a clean cloth, if any.
 - (3) Repair all the cracks or damages without fail, if any.
- Put the transmitter into the accessory storage case and keep it in the dry and cool place where the wind and rain or direct sun ray is sheltered.

4-130 12/2022 MC305CB-3

SEARCHER HOOK SAFETY PRECAUTIONS

NOTICE: For more information on precautions not described here, see "Section 2 SAFETY."

Handling Precautions

Moment Limiter Settings Check

When using 850 kg searcher hook, confirm that the moment limiter is set to the following wire falls/option mode and searcher hook position: "850 kg searcher hook mode."

If the crane is operated in a mode other than 850 kg searcher hook mode, the moment limiter will not operate correctly, posing risk of machine damage, toppling, or other serious accidents.

Precautions When Attaching/Removing Main Unit or Altering Position

- Be sure to tighten the searcher hook mounting bolts using the specified torque to keep the searcher hook from falling when it is being attached.
- Keep fingers out of the pin holes at all times.
- The position pins must always be secured using lynch pins. Serious accidents may result if the position pins become detached during operations.

Operating Precautions

Precautions Using Boom Raising Enable Switch

Use the boom raising enable switch only in 850 kg searcher hook mode.

In contrast to regular crane operations, if the crane is overloaded in 850 kg searcher hook mode, the operation will stop automatically. Use the boom raising enable switch only when the boom has stopped automatically after entering the overload area while being lowered or extended. Do not use this switch in normal situations to lift loads off the ground.

Serious accidents such as machine damage or toppling may occur if you use the boom raising enable switch to lift loads off the ground.

850 kg SEARCHER HOOK COMPONENTS (OPTION)

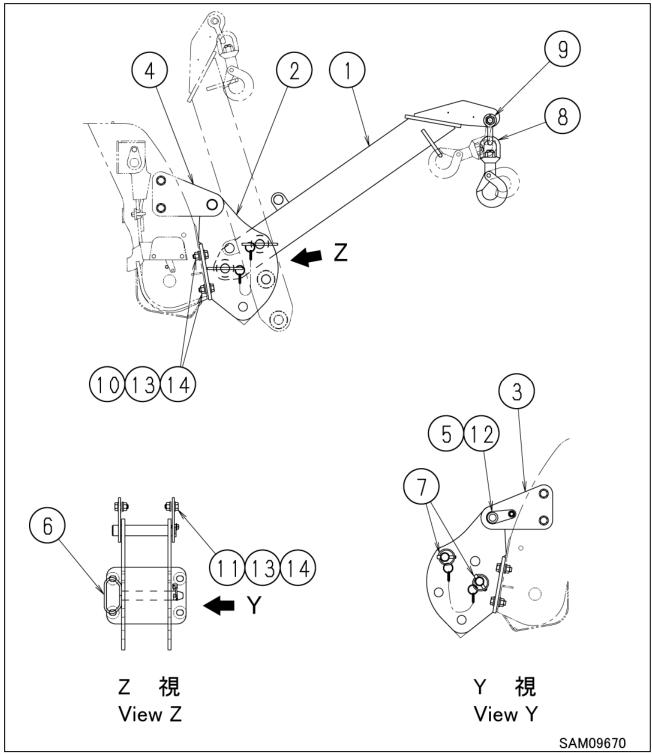

Fig. 4-373

- 1 E-Boom
- 2 Bracket
- 3 Bracket 1
- 4 Bracket 2
- 5 Pin
- 6 Position pin
- 7 Lynch pin

- 8 Hook
- 9 Shackle
- 10 Hexagonal bolt with washer
- 11 Hexagonal bolt with washer
- 12 Hexagonal bolt with washer
- 13 Nut
- 14 High tension washer

4-132 12/2022 MC305CB-3

850 kg SEARCHER HOOK MOMENT LIMITER DISPLAY

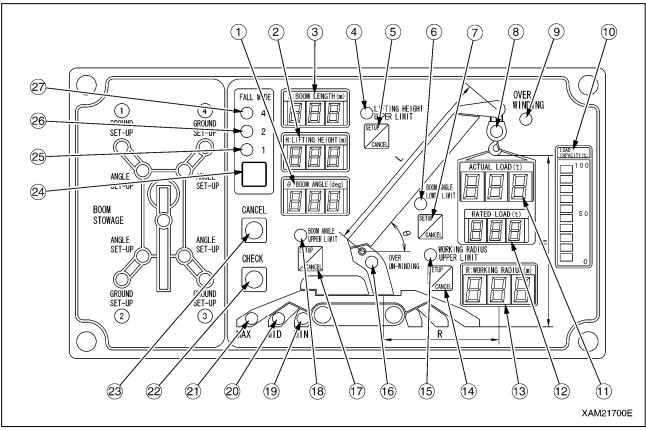

Fig. 4-374

- 5 Boom lifting height upper limit switch (Setup / cancel)
- 6 Boom angle lower limit LED (Orange)
- 7 Boom angle lower limit switch (setup / cancel)
- 8 Load factor LED (Changes to green, yellow, and red)
- 9 Over Winding LED (Red)
- 10 Load capacity display (Yellow)
- 11 Actual load display
- 12 Rated total load display
- 13 Working radius display

- 14 Working radius upper limit switch (Setup / cancel)
- 15 Working radius upper limit LED (Orange)
- 16 Over un-winding LED (Orange)
- 17 Boom angle upper limit switch (setup / cancel)
- 18 Boom angle upper limit LED (Orange)
- 19 Outrigger MIN. extension LED (Blue)
- 20 Outrigger MID. extension LED (Blue)
- 21 Outrigger MAX. extension LED (Blue)
- 22 Check switch
- 23 Cancel switch
- 24 Fall mode / Option selector switch
- 25 1-fall LED (Blue)
- 26 2-fall LED (Blue)
- 27 4-fall LED (Blue)

NOTICE: For information on the moment limiter not provided here, see "MOMENT LIMITER (OVERLOAD DETECTOR)" on page 4-68.

Fall Mode Selector Switch and Fall Mode Display LED (Blue)

DANGER! When using an 850 kg searcher hook, the number of wire falls, the option mode, and the searcher hook position must be set as "850 kg searcher hook mode". Do not use the 850 kg searcher hook except when it is in 850 kg searcher hook mode. Serious accidents such as machine damage may result because the moment limiter will not operate correctly.

Alter the number of wire falls and the option mode using the number of wire falls/option selector switch.

Set the number of wire falls and the option

mode for the moment limiter to 850 kg
searcher hook mode (all blinking) using the
number of wire falls/option selector switch
(24) on the display panel.
Holding down the switch for at least 2
seconds switches the number of wire falls and
the option mode. And subsequently holding

the option mode. And subsequently holding down the switch for at least 2 seconds cycles through the LED display for the number of wire falls in the sequence " $\times 4 \rightarrow 300$ kg searcher hook mode (all lit) $\rightarrow 850$ kg searcher hook mode (all blinking) $\rightarrow \times 1 \rightarrow \times 2 \rightarrow \times 4...$ ".

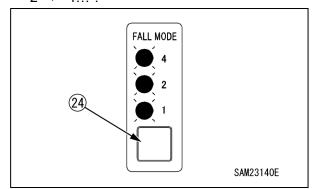

Fig. 4-375

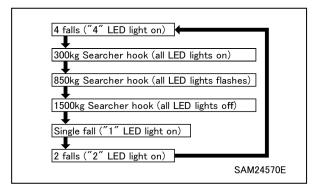

Fig. 4-376

NOTICE: When changing the setting, right after doing so, release your hand from the switch, and then press the switch again.

Cancel Switch

DANGER! Do not use 850 kg searcher hook if actual searcher hook position and display of boom length window do not match. Without setting moment limiter to the actual searcher hook offset position, moment limiter may not work properly and thus may result in crane damage and machine trip that may result in serious accidents.

Use this switch and the fall mode selector switch to set searcher hook offset position shown in the boom length window.

Use the setting cancel switch and the number of wire falls/option selector switch to alter the mode display in the boom length display.

 In 850 kg searcher hook mode, hold down both the number of wire falls/option selector switch (24) on the display panel and the setting cancel switch (23) together for at least 2 seconds to alter the mode display in the boom length display to match the searcher hook position.

For details about the searcher hook position and the mode display in the boom length display, see "Searcher Hook offset position and mode display in boom length display" on page 4-136.

Holding down both the number of wire falls/option selector switch (24) and setting cancel switch (23) together for at least 2 seconds switches the mode display in the boom length display in the sequence "SH1 \rightarrow SH2 \rightarrow SH3 \rightarrow SH1...".

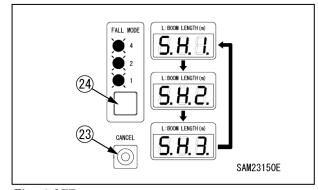

Fig. 4-377

4-134 12/2022 MC305CB-3

M A E D A Mini-Crawler Crane Section 4 – 850 kg SEARCHER HOOK MOMENT LIMITER DISPLAY

NOTICE: When changing the setting, right after doing so, release your hand from the switch, and then press the switch again.

When in 850 kg searcher hook mode, searcher hook position mode display and actual boom length value are shown alternately.

Searcher Hook offset position and mode display in boom length display

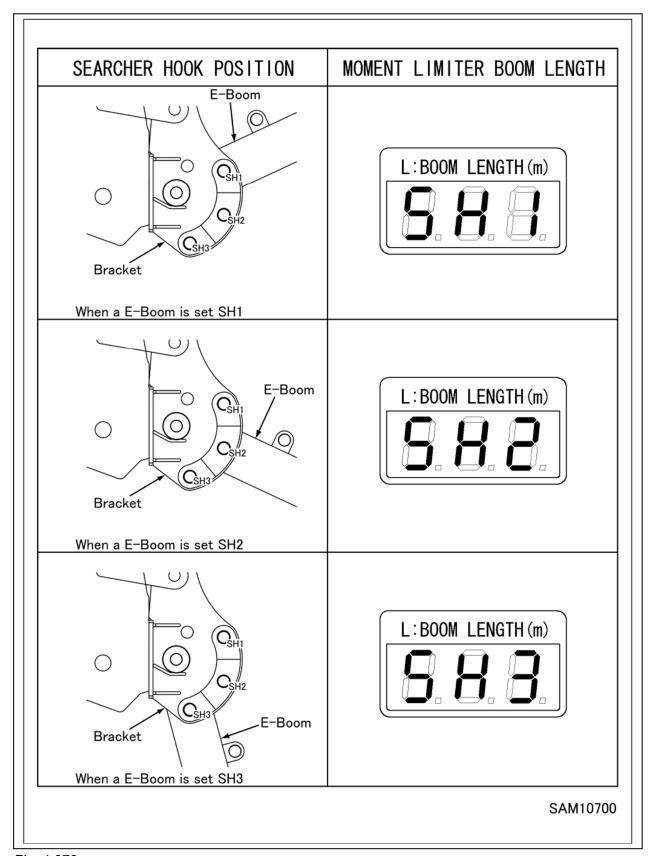

Fig. 4-378

4-136 12/2022 MC305CB-3

850 kg SEARCHER HOOK OPERATION

Installation of 850 kg Searcher Hook

Install bracket (1), (2), and (3) using M12 bolts with washers (strength 10.9), nuts, and washers to main boom. Using torque wrench, tighten bolts at 93N·m (±14N·m). Then insert pin (4) into holes of bracket (1), (2), and (3) as shown in the drawing, and tighten M8 bolts with washers (strength 10.9) at torque 27N·m (±8N·m).

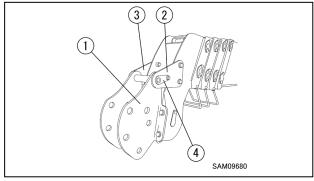

Fig. 4-379

DANGER! Crash Hazard. Make sure to torque searcher hook mounting plate bolts to the designated tightening torque. To install searcher hook, always use new genuine Maeda bolts, nuts, and washers.

 Using the fall mode selector switch (23), set moment limiter to 850 kg searcher hook mode (all LED flashes).
 Also make sure the boom length display changes to either SH1, SH2, or SH3.

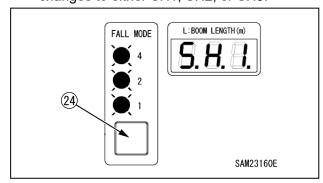

Fig. 4-380

DANGER! Do not operate 850 kg searcher hook without setting moment limiter as "850 kg searcher hook mode". Without setting in correct mode, moment limiter will not work properly, and thus may result in crane damage or serious accident.

CAUTION: The last status of the fall mode is memorised even after starter switch is turned to the "OFF" position.

Changing Searcher Hook Position

1. See "OUTRIGGER SETTING" on page 4-46 and set the outrigger.

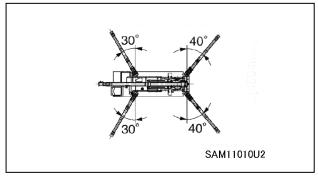

Fig. 4-381

Remove the Lynch pin (6) from the end of position pin (5), and remove the position pin (5).

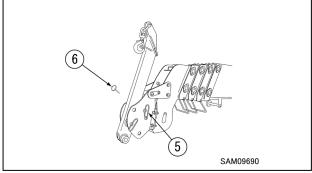

Fig. 4-382

3. Line up the hole (8) in E-boom (7) tip and hole (9) in bracket.

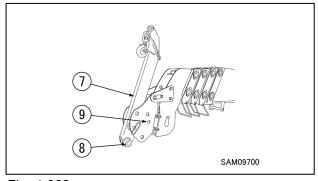

Fig. 4-383

4. Insert the removed position pin (5) (in procedure 4.) through the hole of bracket (9), and secure with lynch pin (6) to the tip of position pin (5).

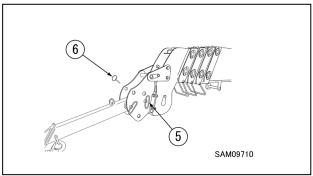

Fig. 4-384

DANGER! Always secure the position pin (5) with the lynch pin (6). If the position pin falls out during operations, serious injury or damage to the machine may result.

5. Remove lynch pin (11) from the tip of position pin (10), and remove the position pin (10).

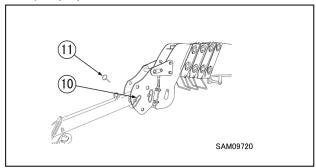

Fig. 4-385

6. Move E-boom (7) to the required angle for the work, and line the holes (1) in the E-boom (7).

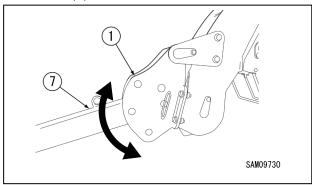

Fig. 4-386

DANGER! E-boom and hook may interfere with each other in RESTRICTED AREA on Rated Total Load chart, and it may cause a serious accident. Always adjust boom angle to proper position for the work.

7. Insert the position pin (10) through the hole

of bracket, and secure with lynch pin (11) to the tip of position pin (10).

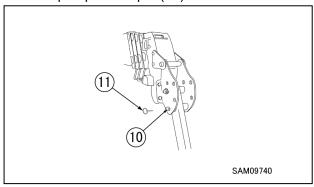

Fig. 4-387

DANGER! Always secure the position pin (10) with the lynch pin (11). If the position pin falls out during operations, serious injury or damage to the machine may result.

8. With the fall mode set as 850 kg searcher hook mode, press the fall mode selector switch (23) and cancel switch (22) at the same time for 2 seconds or more and shift to set actual searcher hook offset position. See "Searcher Hook offset position and mode display in boom length display" on 4-136 for correct setting.

Pressing the fall mode selector switch (23) and cancel switch (22) at the same time for 2 seconds or more shifts boom length display in order of "SH1 → SH2 → SH3 → SH1 ···"

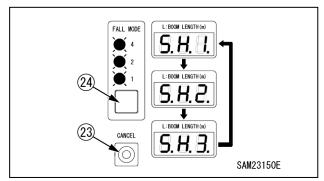

Fig. 4-388

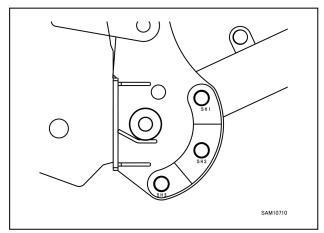

Fig. 4-389

DANGER! Do not use 850 kg searcher hook if actual searcher hook offset position and display of boom length window do not match. Without setting moment limiter to the actual searcher hook offset position, moment limiter may not work properly and thus may result in crane damage and machine trip that may result in serious accidents.

Operation

1. Attach the load securely to the hook (12) and start operations.

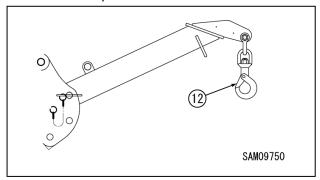

Fig. 4-390

DANGER! When hoisting a load in 850 kg searcher hook mode, raise boom to hoist the load off the ground, and stop for a while to check if the load is safe to hoist.

NOTICE: Characteristic of moment limiter display

- At certain working conditions, moment limiter may display bigger load value than actual load.
- Sudden lever operation increases error in reading load. When operating boom derricking lever, move the lever slowly.
- If the machine stops automatically due to entering the overload zone during boom derricking or telescoping operations, retract the boom until it is within the safe zone, then use the boom derricking operation to lower the load.

If it is unavoidably necessary to raise the boom after the machine has automatically stopped, the boom can be raised while the boom raise override switch is depressed.

DANGER! The boom raise override switch should be used only when the machine has stopped automatically after entering the overload zone while boom derricking. If the machine stops automatically after entering the overload zone while boom telescoping, retract the boom to restore operations.

Never use the switch for normal lift-off operations.

Using this switch for lift-off operations may cause serious accidents such as damage to the machine or toppling.

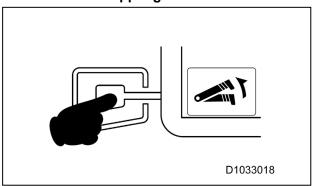

Fig. 4-391

NOTICE:

- In case machine is automatically stopped by entering overload area by boom lowering or boom extending operation, recover from the overload area by retracting boom, or lifting boom by keeping the boom lift bypass switch ON.
- When working envelope is set, and operation automatically stops at the boom upper angle limit or hook height upper limit, boom can be lifted beyond the limit by using this boom lift bypass switch. The boom lift bypass switch is to be used only when in searcher hook mode.

CAUTION: E-boom and hook may interfere with each other in RESTRICTED AREA on Rated Total Load chart.

Do not exceed 30 degrees of boom angle when E-boom offset position is in SH1.

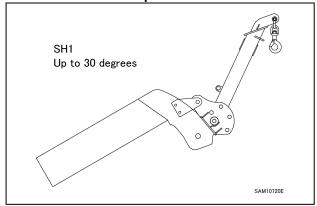

Fig. 4-392

4-142 12/2022 MC305CB-3

Wire Falls Selector Switch and Wire Falls Display LED (Blue)

DANGER! Moment limiter setting and searcher hook position must be set as "1.5t searcher hook mode" when using 1.5t searcher hook.

Using 1.5t searcher hook other than in 1.5 searcher hook mode may prevent activation of the pre-warnings and boom auto-stop even when the approaching overload, and thus may result in crane damage or machine tipping and could cause a serious accident.

Use the fall mode / Option selector switch (24) and change to 1.5t searcher hook mode.

Shift the fall mode/option selector switch (24) on moment limiter display unit to "1.5t searcher hook mode" (all LED lights off).

Each time you press the switch for 2 seconds or more, the setting of the fall mode changes in the order as below.

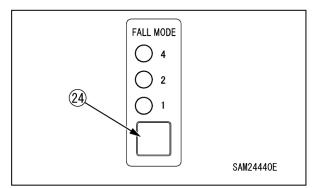

Fig. 4-395

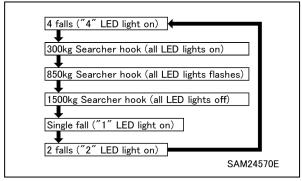

Fig. 4-396

NOTICE: When changing the setting, right after doing so, release your hand from the switch, and then press the switch again.

Cancel Switch

DANGER! Do not use 1.5t searcher hook if actual searcher hook offset position and display of boom length windows do not match. Without setting moment limiter to the actual searcher hook offset position, moment limiter may not work properly and thus may result in crane damage or machine tipping and could cause a serious accident.

Use this switch and fall mode/option selector switch to set searcher hook offset position shown in the boom length window.

With fall mode set as 1.5t searcher hook mode, press fall mode/option selector switch (24) and cancel switch (23) at the same time for 2 seconds or more and shift to set actual searcher hook offset position.

See "Setting 1.5 t searcher hook position" on page 4-144 for correct setting.

Pressing fall mode/option selector switch (24) and cancel switch (23) at the same time for 2 seconds or more shifts boom length display in order of "SH1 \rightarrow SH2 \rightarrow SH3 \rightarrow SH1 \cdot \cdot "

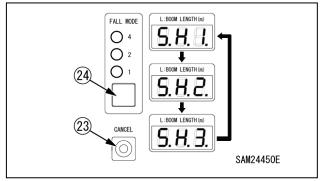

Fig. 4-397

NOTICE: When changing the setting, right after doing so, release your hand from the switch, and then press the switch again.

When in 1.5t searcher hook mode, searcher hook position mode display and actual boom length value are shown alternately.

Setting 1.5 t searcher hook position

DANGER! Searcher hook position and moment limiter must be set to match correctly when using the searcher hook.

Incorrect setting may cause incorrect moment limiter value display, and thus may result in machine tipping and could cause a serious accident.

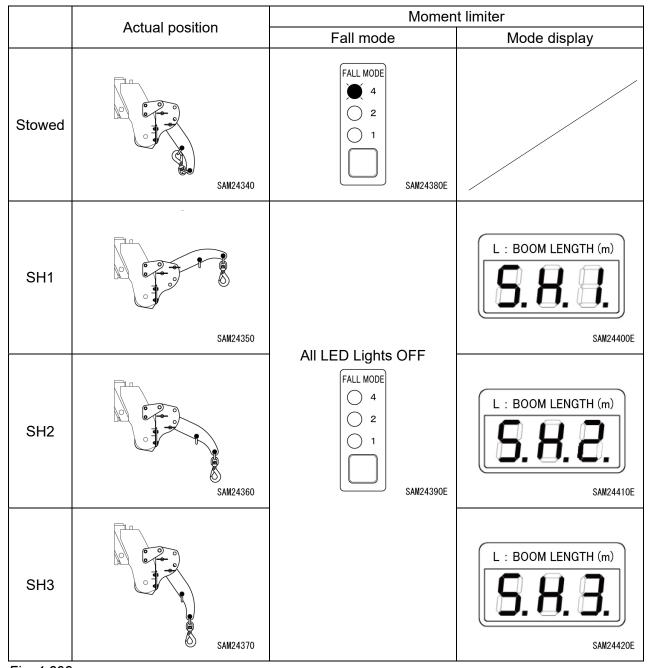

Fig. 4-398

4-144 12/2022 MC305CB-3

1.5 t SEARCHER HOOK OPERATION

Installation of 1.5 t Searcher hook

DANGER!

- Crash Hazard. Make sure to torque searcher hook mounting plate bolts to the designated tightening torque.
- •To install searcher hook, always use new genuine Maeda bolts, nuts, and washers.
- Install bracket (1) using M12 bolts with washers, nuts, and washers to main boom head.

At this time, install so that the side (A) of the boom head and the side (B) of the bracket are to be on the same plane.

Designated torque:

111±12 N·m (11.3±1.2 kg·m)

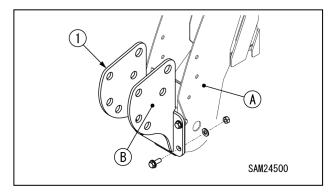

Fig. 4-399

2. Lightly tighten bracket A (2) and bracket B (3) to the head of the boom using M12 washers with bolts, nuts and washers.

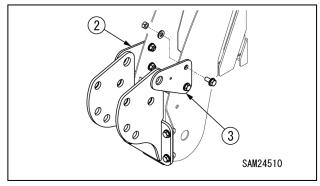

Fig. 4-400

NOTICE: There are engraved number "3" on both the bracket A (2) and bracket B (3) of MC305C-2/MC305C-3. This indicates these brackets are for MC305C-2/MC305C-3, so please make sure the number is "3", before installation.

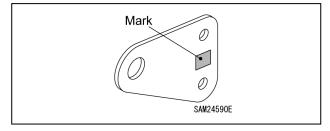

Fig. 4-401

3. Insert the fixing pin (4) through the hole in bracket B (3) and pass it through all the holes in bracket (1) and bracket A (2). Fix the fixing pin (4) to the bracket B (3) with bolts with M8 washers.

Designated torque:

31±3 N·m (3.2±0.3 kg·m)

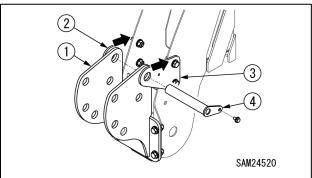

Fig. 4-402

4. While pressing bracket A (2) and bracket B (3) to the direction of the arrow, tighten the bolt lightly tighten in the step 2.

Designated torque:

111±12 N·m (11.3±1.2 kg·m)

5. Fix the E-boom (5) into the bracket (1) by inserting the position pin (6).

Secure the position pin (6) with the lynch pin (7) so that it does not come off.

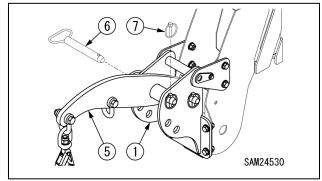

Fig. 4-403

Changing Searcher Hook Position

DANGER!

- Do not use 1.5t searcher hook if actual searcher hook offset position and display of boom length window do not match.
 Without setting moment limiter to the actual searcher hook offset position, moment limiter may not work properly and thus may result in crane damage or machine tipping and could cause a serious accident.
- Depending on the boom angle, the E-boom and hook may interfere with each other, potentially leading to serious accidents. Be sure to adjust to an angle appropriate for the work.
- When hoisting a load in 1.5t searcher hook mode, raise boom to hoist the load off the ground, and stop for a while to check if the load is safe to hoist.
- When you work, never put your finger into the pin hole.

CAUTION: The last status of fall mode/option mode is memorized even after starter switch is turned to the "OFF" position.

1. Set outriggers.

See the crane operation manual for how to set the outriggers.

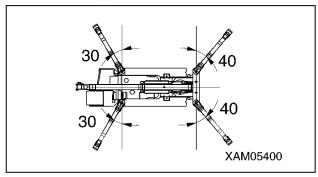

Fig. 4-404

2. Release the stored swivel hook (8) from the shackle (9).

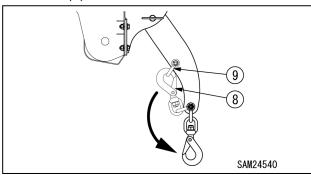

Fig. 4-405

3. Remove the lynch pin (7), remove the position pin (6), and change the E-boom (5) to the desired angle.

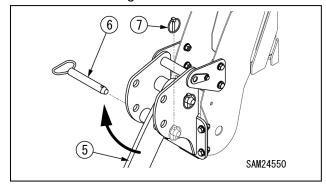

Fig. 4-406

CAUTION: When pulling out the position pin (6), be sure to support the E-boom (5) with your hand.

4. After the position of the E-boom (5) is determined, insert the position pin (6) and fix it with the lynch pin (7).

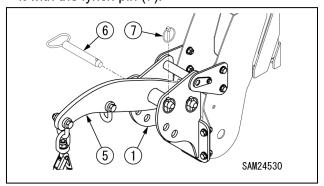

Fig. 4-407

DANGER! Always secure the position pin (6) with the lynch pin (7). If the position pin falls out during operations, serious injury or damage to the machine may result.

4-146 12/2022 MC305CB-3

5. With fall mode set as 1.5t searcher hook mode, press fall mode/option selector switch (24) and cancel switch (23) at the same time for 2 seconds or more and shift to set actual searcher hook offset position.

See "Setting 1.5 t searcher hook position" on page 4-144 for correct setting.

Pressing fall mode/option selector switch (24) and cancel switch (23) at the same time for 2 seconds or more shifts boom length display in order of "SH1 \rightarrow SH2 \rightarrow SH3 \rightarrow SH1 \cdot \cdot "

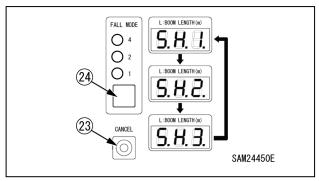

Fig. 4-408

NOTICE: Characteristic of moment limiter display

- At certain working conditions, moment limiter may display bigger load value than actual load.
- Sudden lever operation increases error in reading load. When operating boom derricking lever, move the lever slowly.

CAUTION: Do not use the swivel hook with the shackle at stowage position.

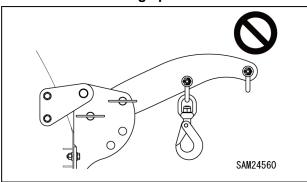

Fig. 4-409

DANGER! Strength of the shackle at stowage position is not secured. If used, there is a risk of serious accidents such as falling of the load due to E-boom breakage.

How to Use the Boom Lift Bypass Switch

DANGER! The boom lift function is stopped automatically when overloaded.

Never use this for normal lifting of loads clear of ground. Hoisting a load off ground by using this switch may cause damage to the machine and serious accident.

In case machine is automatically stopped by entering overload area by boom lowering or boom extending operation, recover from the overload area by retracting boom, and then lower the load by boom lowering operation.

If it is unavoidable to operate boom raising, the boom lift bypass switch can be used to raise the boom.

When you operate boom raising using the boom lift bypass switch, operate the boom raising while keeping the switch to ON. After the operation is completed, the switch automatically returns to "OFF" when you take your hand off the switch.

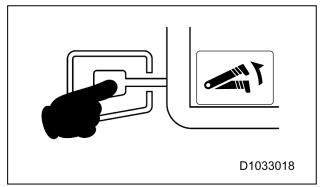

Fig. 4-410 NOTICE:

- In case machine is automatically stopped by entering overload area by boom lowering or boom extending operation, recover from the overload area by retracting boom, or raising boom by keeping the boom lift bypass switch ON.
- When working envelope is set, and operation automatically stops at the boom upper angle limit or hook height upper limit, boom can be raised beyond the limit by using this boom lift bypass switch. Auto-stop function does not work when this switch is used after operation is stopped by working range limit setting, so please be careful.

CAUTION: E-boom and swivel hook can interfere with each other if the E-boom position is in "SH1", so boom raising automatically stops if boom angle exceeds 30 degrees.

If you need to operate above the boom angle 30 degrees, use SH2 or SH3 position.

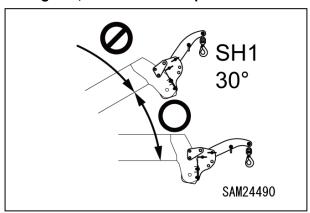

Fig. 4-411

DANGER!

- If you operate under condition that the E-Boom and swivel hook interfere with each other, it may lead to a serious accident such as dropping of a load due to breakage of the lifting accessories.
- Do not operate boom raising using the boom lift bypass switch.

4-148 12/2022 MC305CB-3

TRANSPORTATION

Observe the related laws and regulations and transport the machine safely.

Transport Precautions

Cautions When Loading or Unloading

- Be especially careful when loading or unloading the Machine because the risks intervene.
- Select a location that is level and has firm road surface when loading or unloading the Machine. In addition, keep enough distance from the roadside.
- Use the gangplanks under 15 degrees or smaller angle. In addition, decide the clearance between gangplanks to meet the centre of the rubber tracks.

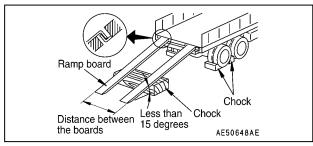

Fig. 4-412

 ALWAYS set the Machine in the "travelling posture" and securely insert the position pins (4 pieces) to the outrigger rotary parts before loading or unloading the Machine.

For more information, see "TRAVELLING POSITION" on page 4-31.

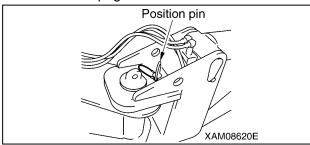

Fig. 4-413

 ALWAYS move backward when loading the Machine. Moving forward may cause a trip.

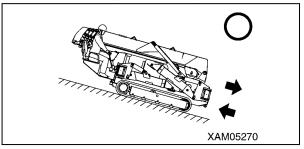

Fig. 4-414

- When loading or unloading, set the motor speed to low and operate slowly by low speed travels.
- Use the gangplanks that have fully strong width, length and thickness, and that enable safe loading/unloading.
- Reinforce with blocks or other substances if the gangplanks deflect much.
- Remove the mud and other substances from the footing to prevent the Machine from skidding over the gangplanks. Remove the substances stuck the gangplanks such as grease, oil or ice, and keep clean.
 Be especially careful in the rainy days where slips easily occur.
- Do NOT change direction over a gangplank.
 Temporarily leave the gangplank before correcting the direction.
- Be slow when operating to change the direction on the truck platform where the footing is unstable.
- After loading the Machine, apply the wood blocks so that the Machine does not move, and securely fix with wire cables or other means.

For more information, see "Loading/Unloading" on page 4-151, and "Cautions on Loading Machine" on page 4-153.

Cautions During Transport

Observe the related regulations and exercise safety during transport.

Cautions When Loading/Unloading with Crane

Be careful of the followings when loading or unloading the Machine by hoisting with a crane.

- Do not use those brackets on the boom to hang the whole unit.
- Before hoisting the Machine, attach the hoisting brackets (1) (for instance shackles) to the outrigger rotary holes (four), and hang the wire cables (2) (four) on the hook (3).

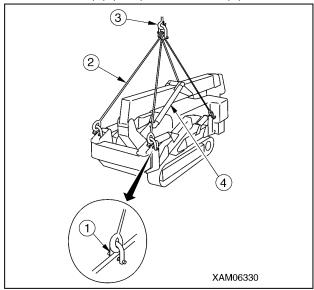

Fig. 4-415

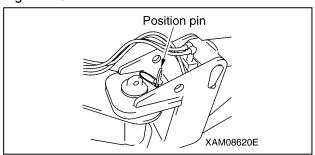

Fig. 4-416

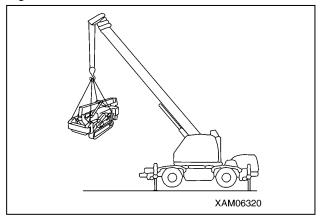

Fig. 4-417

- To hoist, use the crane, wire cables (2) and hoisting bracket (1) (for instance shackles) having enough strength against the Machine mass (weight).
 - Following is the load force that applies to each of the wire cables when the Machine main body is hoisted by four wire cables.
- ALWAYS set the Machine in the "travelling posture" and securely insert the position pins (4 pieces) to the outrigger rotary parts before hoisting the Machine.

The centre of gravity position of the Machine has been decided under the condition where the Machine posture was "travelling posture". For more information, see "TRAVELLING POSITION" on page 4-31.

 Use the carrying instruments shown the left figure and work safely when carrying the Machine using a crane.

Recommended hoisting equipment

- Wire cables (two in front):
 12.5 diameter x length of 2150 mm (breaking force of 7.5 t or more)
- Wire cables (two in back):
 12.5 diameter x length of 1650 mm (breaking force of 7.5 t or more)
- · Shackle: BC or SC, nominal 14

4-150 12/2022 MC305CB-3

Loading/Unloading

WARNING!

- For more information on the dimensions and mass of the machine, see "PRINCIPLE SPECIFICATIONS LIST" on page 3-4.
- Select and use the ramp boards that satisfy the following conditions.
- Has the length that when placed, the angle from the track is 15 degrees or less.
- Has the width no narrower than the rubber tracks.
- Has the thickness and strength that can fully withstand the mass of the machine.
- Be sure to place the ramp boards perpendicular to the truck box.
 Also, match the centre of the each of the rubber tracks with the centre of corresponding ramp board.
 Misguided ramp boards and unmatched rubber crawlers may cause the machine to slip out of the ramp boards and cause serious accidents.
- Use ramp boards with slope of 15 degrees or less. The space between boards shall be set to be appropriate to the centre of the rubber tracks.
- Always put the machine in the "travelling posture" when loading/unloading the machine. For more information, see "TRAVELLING POSITION" on page 4-31.

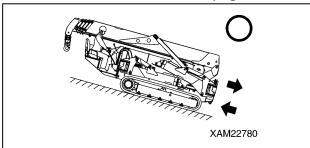

Fig. 4-418

- Always load the machine by moving backward. Moving forward involves overturning hazard. The operator must be on the back side of the truck.
- Always unload the machine by moving forward. Moving backward involves overturning hazard. The operator must be on the back side of the truck.
- Loading/Unloading the machine involves danger. Be extremely careful.

- Select flat and solid ground for loading/unloading the machine. Keep sufficient distance from the shoulders.
- Remove dirt around the crawlers to prevent side slip of the machine on the ramp boards. Remove any materials on the loading ramps such as ice, grease, and oil.
- Never change direction on the ramp boards. Go down from the ramp board, and then change the direction.

Always put the machine in the "travelling posture" when loading/unloading the machine. Always use ramp boards or forwarding blocks when loading/unloading the machine and use the following procedure.

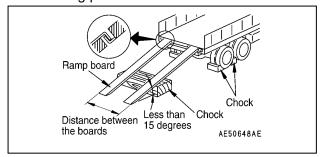

Fig. 4-419

- The trailer securely. Place wheel blocks to Brake the wheels of the trailer to secure the trailer.
- Secure the ramp boards in a way that the centre of the trailer and the machine agree.

NOTICE: Verify that the two lamp boards are at the same height.

- 3. Depress the acceleration pedal gently.
- 4. TRAVEL slowly toward the ramp boards, and load/unload the machine in a way that the boom does not hit the trailer. Move backward to load the machine, and forward to unload the machine.
- 5. Do not operate any other lever than travelling levers on the ramp boards.
- 6. Load the machine properly to the desired position on the trailer.

Hoisting Machine

WARNING!

- The hoisting attachments such as wire cable and shackle used in hoisting shall be sufficiently strong for the weight of this machine.
- When hoisting the machine, always put the machine in the "travelling posture" and securely insert the four position pins into the rotary of the outriggers.

As for the centre of gravity of the machine, the machine posture is determined to be "travelling posture".

For more information, see "TRAVELLING POSITION" on page 4-31.

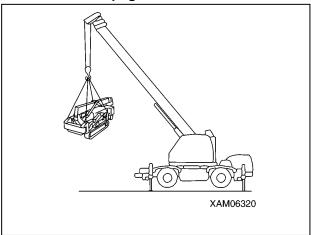

Fig. 4-420

 Do not hoist the machine in the posture other than those described in this section.
 The machine may lose its balance.

CAUTION:

- When the local laws and regulations are applicable, the person who uses the crane to perform hoisting operation must be qualified to do it. If not, the operator must be well trained and skilled.
- See "Machine Dimensional Drawing" on page 3-8. The dimensions are for standard specifications. The hoisting method may vary depending on the attachments and options mounted. In that case, contact us or our sales service agency.

Hoist the machine on the solid and flat ground using the following procedure.

- See "TRAVELLING POSITION" on page 4-31 and put the machine in the "travelling posture".
- Verify that the position pins (four) are securely inserted in the rotary joint of the outrigger.
- 3. Install a shackle (1) to the holes (4 locations) on the outrigger rotaries and hang the hoisting attachments (2) over the hook (3).

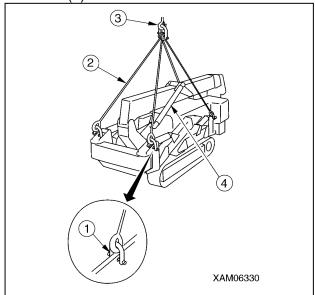

Fig. 4-421

- 4. As soon as the machine leaves the ground, stop and wait until the machine is stabilised. Then slowly hoist the machine.
- Check the changes in the posture due to the leakage from the hydraulic circuit on the head side of the boom derrick cylinder (4) when the machine is hoisted.

NOTICE:

Recommended hoisting attachments

- 12.5 diameter x length of 2150 mm (breaking force of 7.5 t or more)
- 12.5 diameter x length of 1650 mm (breaking force of 7.5 t or more)
- Shackle: BC or SC, nominal 14

4-152 12/2022 MC305CB-3

Cautions on Loading Machine

WARNING! Select flat and solid ground for loading/unloading the machine. Keep sufficient distance from the shoulders.

Load the machine to the specified position on the trailer and secure the machine with the following procedure.

- 1. Remove the key of the starter switch.
- Provide a square timber in front and back of the rubber tracks to prevent the machine from moving during transportation. Secure the machine with chain or wire cable.
 Secure it surely, especially not to let it slip to the side.

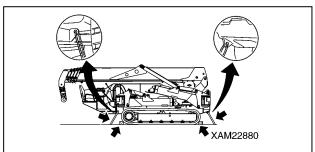

Fig. 4-422

Cautions During Transportation

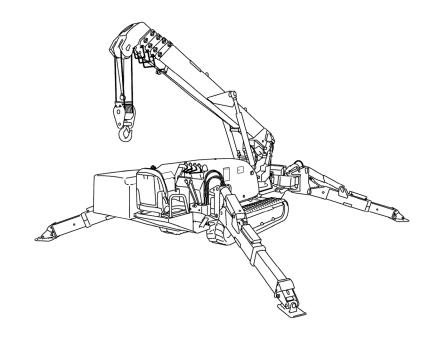

WARNING! Take road width, height, and weight into consideration in determining the transportation route.

If there are applicable local laws and regulations, observe these laws and regulations for safe transportation.

If not, contact us or our sales service agency.

This Page Intentionally Left Blank

4-154 12/2022 MC305CB-3

Section 5 MAINTENANCE AND INSPECTION

GENERAL MAINTENANCE INFORMATION AND PRECAUTIONS

Thorough understanding of the inspection and maintenance items is required to perform efficient inspection and maintenance that contributes to safe use of this machine.

WARNING!

- Do not perform any inspection or maintenance that is not described in this manual.
 - Potential serious accident or machine failure may occur if it is performed at the discretion of the individual.
 - In the event that a judgment on the severity of a failure or malfunction is unable to be made, contact us or our sales service agency.
- In the event that a failure or malfunction is encountered in machine operation or found in inspection, report it to your employer or supervisor immediately. Contact us or our sales service agency.
- Inspection and maintenance should be performed with the machine placed on a level and strong footing.

Precautions Before Maintenance Failure Report

Execution of a maintenance not described in our manual may cause unexpected failures.

Contact us or our sales service agency.

Clean Before Inspection or Maintain

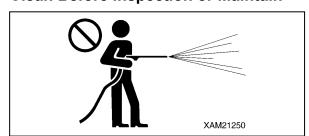

Fig. 5-1

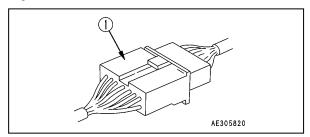

Fig. 5-2

- Before starting an inspection or maintenance, clean the machine and prevent rubbish from entering the machine and make sure the safety will be ensured during maintenance.
- Attempt to inspect or maintain with the maintenance machine still dirty not only lessens chance of locating faulty part, but may cause rubbish or mud entering your eye, or slipping and tripping that results in injury.
- Always observe followings when washing the vehicle.
- Use antislip shoes to prevent slips and trips caused by wet foothold.
- · Do not use high-pressure water jet cleaners.
- Do not allow water to come into direct contact with electrical systems (battery, sensors, connector (1), controller, receiver box, etc.).
 Water entering the electrical systems can be dangerous and may also cause malfunctions or improper operations.

Tidy Up Workplace

In the workplace, put away the tools, hammers and other things that obstruct the works, wipe of slippery items such as greases and oils, and exercise tidy up and cleaning for safe work.

Untidy workplace may cause stumbles and slips that result in injury caused by tipping.

Follow Supervisor Instruction During Teamwork

Appoint a person who supervises the work and follow his/her instructions in case of machine repair or installing/uninstalling a work device. Unexpected accidents due to misunderstood communication between workers may occur during teamwork.

Use Appropriate Tools

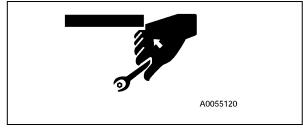

Fig. 5-3

5-2 12/2022 MC305CB-3

Do not use damaged or deteriorated tool, or use a tool for a purpose that is not a proper purpose of use. Use tools suitable for the maintenance work.

Entrance of a broken piece of a tool such as a boss with crashed head or a hammer may destroy eyesight.

Handling Illumination Devices

Fig. 5-4

- Use explosion proof illumination device when inspecting with oil, battery, or similar substance. Failure to use explosion proof illumination device may cause leap fire and explosion.
- Attempt to work without using illumination device in a dark place may cause injury or other issue. Always use illumination device.
 Do not use a lighter or other burning object even if dark. Such use may cause fire, and furthermore the battery gas may catch fire and explode.

Stop Machine Before Inspection or Maintenance

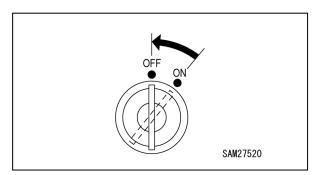

Fig. 5-5

- Before inspection or maintenance, always park
 the machine at a location where the ground is
 level, rock-falls and landslides do not occur, is
 a lowland and flood does not occur, and fully
 retract and lower the boom, and stop the
 machine.
- Operate each of the crane operation levers forward backward several times to relief the pressure remaining in the hydraulic circuits.

- Apply pawls to so that the prevent rubber tracks do not move.
- Persons in charge of the maintenance should pay attention to prevent physical body and clothes from contacting the moving parts.

Fire Risk Prevention

Fig. 5-6

Always observe the followings during maintenance where the oil, battery, or other substance that may catch fire is handled.

- Keep the oil and any other easily combustible oil and fats away from fire during storage.
- Do not leave the site when replenishing the oil.
- Use incombustible cleaning oil, and do not use light petroleum, gasoline or anything else that may catch fire.
- Do not smoke when inspecting or maintaining.
 Smoke at a location designated to do so.
- When inspecting, use explosion proof illumination devices but do not use fires such as a lighter for illumination.
- Loosened and damaged electrical connections may cause short circuit that may result in a fire.
 Inspect accordingly during the inspections before starting work.
- Make sure a fire extinguisher is place near the inspection / maintenance site.

Precautions During MaintenanceNo Unauthorised People

Do not admit anyone other than necessary workers during maintenance. And post a guard as necessary.

Be especially careful in case of a polishing, welding work, or digging work.

Measures upon Finding Abnormality During Inspection

- Always repair whenever an abnormality is found during inspection.
 Attempt to use without repairing the defect may cause bodily accidents.
- Contact us or our sales service agency.

Do Not Drop Tool or Part Inside Machine

- Do not drop any bolt, nut or tool inside the machine when inspecting while opening the inspection port or tank replenishment port.
 Dropped object may damage the machine or cause the machine to operate improperly and thus may cause accidents. If dropped, always retrieve.
- Do not keep anything unnecessary for the inspection in your pocket.

Noise Caution

Large noise in the surroundings may cause hearing difficulty or deafness.

Put on ear covers or earplugs before long time noise exposure.

Cautions When Working Below Machine

Fig. 5-7

- Park the car over a level and firm location, and fully retract and lower the boom.
- Before the maintenance below the machine, extend the outriggers maximum so the machine lifts. When doing so, insert support platforms (height increasers) below front and rear of the machine to stabilise the machine.

Cautions When Working Above Machine

Fig. 5-8

- Tidy the footing to avoid falling and always observe following precautions during maintenance above the machine.
 - · Do not spill oil or grease.
 - Do not sprawl the tools.
 - Beware of the footing when walking.
- Do not jump from the machine under any circumstance.

Use a platform, and secure your body with three locations of the limbs (both feet and one hand, or both hands and one foot) when climbing up or down the machine.

- Use protective equipment and safety belt that suit the work.
- Do not step on the boom, outrigger or machinery cover to prevent bodily accidents such as falling or tripping due to slippage.

Beware of Chips When Working with Hammer

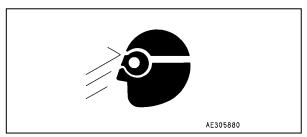

Fig. 5-9

During the hammering works, keep protective equipment such as protective glasses and a helmet on, and insert a copper bar or similar object between the hammer and the target when hitting.

Giving impact to a hard metal part such as a pin or a bearing may cause the broken chip to enter eye and inflict injury.

5-4 12/2022 MC305CB-3

Cautions During Welding Repair

Weld in a location with good facility, and, only authorised personnel are permitted to weld.

Unauthorised personnel are strictly prohibited since risks such as gas generation, fire and electrical shock are present when welding.

The personnel authorised to weld are requested to always observe the followings.

- Disconnect the battery to prevent battery explosions.
- Peel off the paint from the welding section to prevent gas generation.
- Attempt to heat up a hydraulic machinery, piping or a section near such part may cause combustible vapour or mist to be generated and catch fire. Avoid heating such section.
- Directly heating a pressurised piping or rubber hose may cause a sudden snip. Apply a fire protection cover.
- Disconnect the wiring connectors of the radio control and remote control system, moment limiter display and converter.
- Put on protective equipment.
- · Keep the ventilation well.
- Put away the combustibles and prepare a fire extinguisher.
- Do not ground to a location near electrical part.
 Such may cause the electrical part to malfunction.

Disconnect Battery

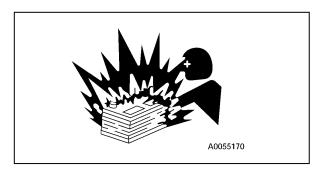

Fig. 5-10

Disconnect the battery to shut off the electricity supply when repairing electrical systems or performing arc welding on the machine.

After turning the starter switch to the "OFF" position, be sure to wait at least one minute before turning the disconnect switch to "UNLOCK". Turning the disconnect switch to "UNLOCK" to shut off the power while the starter switch is set to the "ON" position may result in accidents since the machine information may not be correctly stored.

Cautions When Adjusting Rubber Track Tension

Fig. 5-11

- Grease is sealed inside the rubber track tension adjuster. The grease is at a high pressure because of the tension of the rubber track. Attempt to release the grease without observing the following precautions may cause the grease valve to pop out and result in serious accident.
- Do not loosen the tension adjustment grease valve one full turn or above. Doing so may cause the grease valve may pop out.
- To avoid the risk during tension adjustment, do not place your body in right front of the grease valve.

For more information, see "Check / Adjust Rubber Track Tension" on page 5-27.

High Pressure Hose Handling Cautions

Oil leaking from high pressure hose may cause fire or bodily accident due to faulty operation.

Whenever a damaged hose or loosened bolt is found, abort working and ask us or our sales service agency for a repair.

 Replacement of high pressure hose requires experienced skill. In addition, the tightening torques are decided by the horse types and size.

Customers are prohibited to repair.

- Replace the applicable part if any of the following conditions is found.
- · Hose sleeve damage or leak.
- Scratch or truncation of the coat, or exposure of reinforcing layer of a wire
- · Coat is partially swollen.
- Indication of twist or collapse is at a movable part of hose.
- · Alien object buried in coating.
- · Hose sleeve deformation.

High Pressure Oil Cautions

Fig. 5-12

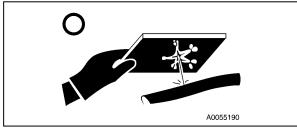

Fig. 5-13

Failure to make sure the pneumatic circuit pressure is relieved before inspection or replacement of a high pressure piping or hose may result in bodily accidents.

Always observe the followings.

- Do not start any inspection or replacement before the pressure dissipates.
- Put on protective glasses and leather gloves.
- When a piping or hose leak exists, the piping/horse itself or vicinity or the ground is wet. If such is seen, a piping crack, hose crack or inflation is considerable, so always ask us or our sales service agency for a repair.

 High pressure oil leaking through a small hole may puncture the skin or destroy eyesight upon contacting with skin or eye.

If the high pressure oil gave serious injury to skin or eye, wash away with flowing water and see the doctor as soon as possible.

Cautions When Temperature Is High

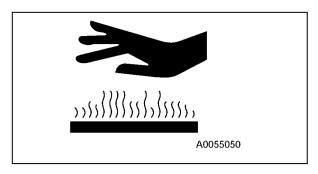

Fig. 5-14

Parts such as the motor, motor controller, and oil will be hot immediately after stopping the machine.

Performing maintenance in this state may result in burns.

Wait until the temperature lowers, then execute the inspection/maintenance following the procedure written in this manual.

Checks After Inspection/Maintenance

Failure to execute an inspection/maintenance item or failure to check the function and operation of the maintained part may cause an unexpected fault which may result in bodily accidents.

Always observe the followings.

- · Checks with machine stopped
 - Check for unexecuted inspection/maintenance.
 - Check that inspection/maintenance was done without errors.
 - Check for any dropped tool or part. Ones caught by the interior or lever related link mechanism poses extra danger.
 - Check for any oil leak, bolt loose and similar issues
 - Check that the inspected/maintained part operates normally.
 - Check that issues such as an oil leak do not occur when load is applied to the oil pressure by increasing the motor speed.

5-6 12/2022 MC305CB-3

Cautions When Treating Waste

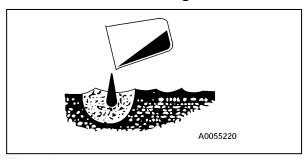

Fig. 5-15

Always observe the following to prevent pollution environment of the district inhabited with human or animal.

- Do not dispose the waste oil down a water system such as sewage or river.
- Always drain into a container when draining the oil from the Machine.
 - Do not directly drain to the ground.
- Observe the applicable legal regulations and rules when disposing harmful substance such as the oil, solvent, filter or battery.

Check the Hour Meters

Read the hour meters daily to check for any maintenance item that reached the obligatory maintenance period.

Use Genuine Parts for Replacement

Always use Maeda genuine parts as specified in the parts catalogue for part replacement.

Use Pure Grease

Always use Maeda pure grease. The viscosity of grease must conform to specifications according to ambient temperature.

Use Clean Oil and Grease

Always use clean oil, grease, and container to keep impurities out of them.

Keep the Machine Clean

Keep the machine clean to facilitate the detection of a malfunction. Especially keep the grease nipple, breather, and oil level gauge (oil access door) clean to prevent impurities from finding their way into the machine.

Handle Oil at Adequate Temperature

Draining oil and replacing filters immediately after stopping the machine is dangerous. Wait for the temperature to cool before draining oil or replacing filters.

If the oil is cold, raise the temperature of the oil to approx. 20 to 40°C.

Check Drain Oil and Oil Filter

For replacement of oil and filter, check the drain oil and exhaust filter to make sure no a considerable amount of metal powder or foreign objects is present.

Protect Oil from Impurities

Avoid dust when inspecting and replacing the oil to keep impurities out of the oil.

Attach a Warning Tag

When draining oil, always attach a warning tag to the instrument panel for the prevention of accidental machine starting.

Follow Safety Precautions

Safety precautions provided on the machine should always be followed when using the machine.

Cautions for Weld Repair

- Power off the machine. (Turn OFF the start switch)
- Do not continuously apply 200V or greater.
- Ground the machine within 1 metre from the welding point.
- Disconnect the connectors on the radio or remote control receiver, monitor, controller, moment limiting indicator, and moment limiting converter.
- Disconnect the battery. For details on the disconnect switch, see "Disconnect Switch" on page 4-5.
- Make sure no sealing or bearing is present between the welding point and the grounding point.
 - Potential damage to sealing may occur due to sparks if disregarded.
- Do not ground around the boom pin or the hydraulic cylinder.
 - Potential damage to a plated section may occur due to sparks if disregarded.

Keep from Flame

Always clean the parts with noncombustible cleaning agent.

Keep the Attachment Surface Clean

Be sure to clean the attachment surface after removing a part to which the O-ring and gasket sealing are attached.

Replace the part with a new one with the O-ring and gasket reattached.

Empty Your Pockets

Always empty your pockets before performing inspection and maintenance of the machine in a downward direction with the cover opened.

5-8 12/2022 MC305CB-3

Assure Safe Rubber Track

When performing crane operation in a rocky location, make sure of no damage to the rubber track and no looseness, cracks, abrasion of bolts and nuts. Loosen the tension of the rubber track more than usual.

Cautions for Machine Wash

- Do not direct a jet of steam to the electrical parts and connector.
- Do not direct a jet of steam onto electrical parts or connectors.
- Never use high-pressure water jet cleaners on the monitor, controller, moment limiting indicator, moment limiting converter, receiver, battery, electrical parts, or the charging port.

Pre- and Post-Work Inspection

Before performing crane operation in the muddy water, rain, snow and on the seashore, always check plugs and valves for looseness. Post-work inspection requires check all the units for cracks and damages and check bolts and nuts for looseness and coming off, with the machine washed.

Carry out early greasing. Grease the operating pin that enters the muddy water on a daily basis.

Cautions for Working in a Dusty Site

Clean the electrical parts and battery frequently to prevent dust accumulation when working in dusty locations.

Do Not Mix Oil

Never use together with different types of oil under any circumstance.

Replace the oil entirely when replenishing a different type of oil.

Always use Maeda genuine parts for part replacement.

BASIC MAINTENANCE

Oil Handling

- Oil is used under extremely harsh conditions (high temperature, high pressure), which causes the oil to undergo deterioration with operating time.
 - Always use oil that meets requirements such as grade and operating temperature defined in the operation manual. Be sure to perform periodic replacement of oil irrespective of contamination in the oil.
- Exercise due caution to handle oil, keeping impurities (such as water, metal powder or dust) out of oil. Most of mechanical failures are attributed to intrusion of impurities.
 Extra caution is required to prevent impurities from finding their way during machine storage and lubrication.
- Do not mix oil with other oil of different grade or brand.
- Oil lubrication must conform to the designated quantity of oil.
 Failure to lubricate at adequate quantity can lead to a machine failure.
- In the event that oil used in the working device turns cloudy, potential intrusion of moisture or air into the oil may be considered. Contact us or our sales service agency.
- When replacing oil, always replace the relevant filter as well.
- "ISO VG32" is adopted for a hydraulic oil system as factory default.
 Do not use any other hydraulic oil that is not recommended by us. Failure to follow the instruction may cause the filters to get clogged.
 A minute amount of oil remaining in piping and cylinders does not cause problems even if

mixed with other oil.

Stocking and Storage of Oil

- Stock and store oil indoors to keep impurities such as moisture or dust out of them.
- When storing oil in drums for a long time, line the drums horizontally aligning the drum bungs sideways (to store them away from moisture).
 Be sure to cover the drums with a waterproof sheet if storing them outside.
- To prevent deterioration of oil resulted from long-term storage, employ the first-in first-out for using oil.

Grease Handling

- Grease is designed to prevent the joint from rattling and making noise.
- A nipple that is not described in the Periodic Maintenance chapter is used for overhauls, which requires no grease replenishment.
 Grease the nipple if a long-term use hinders its smoothness.
- Wipe off old grease squeezed out after greasing. Extra care is required to wipe a part that the adhesion of sands and dust accelerates the wearing away of the rotating part.

Filter Handling

- A filter is an extremely important part that keeps major equipment free from impurities in oil and circuit, which prevents an associated failure. Periodic replacement of the filter is required in accordance with the Operation Manual. The replacement period should be shortened in responses to harsh operating environments or the oil used.
- Do not reuse any washed filters (cartridge type one) under any circumstances.
- After replacing an oil filter, check the used filter for any metal powder.
 If check finds metal powder on the used filter, contact us or our sales service agency.
- As to a replacement filter, always unpack it immediately prior to its use.
- · Always use Maeda genuine filters.

Electrical Part Handling

- The electrical parts are susceptible to water damage and damaged coating. A current leakage is developed if the electrical parts are wetted or have damaged coating, which causes the machine to go out of order and malfunction. Exercise due caution to handle the electrical parts.
- Never remove and disassemble equipment (electrical parts) from the machine.
- Only optional electrical parts that accompany the machine can be installed.
- Keep the electrical parts away from water when the machine is washed and used in the rain.
- When using the machine at the seashore, keep the electrical parts free of water and impurities to prevent corrosion.

5-10 12/2022 MC305CB-3

Hydraulic Equipment Handling

- Hydraulic equipment will be at elevated temperatures during and immediately after operation. Hydraulic equipment operates under high pressure. The following precautions should be observed when performing inspection and maintenance of hydraulic equipment.
- Place the machine in travel position on a level surface to inhibit the application of pressure to the cylinder circuit.
- Hydraulic oil and lubricating oil will be at elevated temperatures and high pressure immediately after equipment comes to a stop.
 Perform inspection and maintenance only after the oil drop in temperature for safety. An internal pressure may be exerted despite temperature drop. When removing the plugs, screws and hose joints, stand aside and provide gradual loosening to decompress.
- Be sure to remove the pressure releasing air from the hydraulic oil tank before performing inspection and maintenance of the hydraulic circuit
- Inspection and maintenance include hydraulic oil level check and replacement of the filters and hydraulic oil.
- Check the O-ring for scratches when removing the high-pressure hose. If check finds scratches, replace the O-ring.
- Air bleed of the hydraulic circuit is required after the following tasks are performed: replacement and cleaning of the hydraulic oil filter element and strainer, repair and replacement of hydraulic equipment, and hydraulic piping replacement.

BREAKING-IN MACHINE

CAUTION: Perform breaking-in for the period of about the first 250 hours (hours displayed on the hour meter).

The life of the machine shortens if overloaded operation or task is performed before the various sections of the machine are used to the operation.

While this machine is shipped after thorough adjustment and inspection, forcing the machine from the beginning will quickly degrade the functions of crane, shortening its life.

Perform the breaking-in for the first "250 hours" (time displayed on the hour meter).

Pay attentions particularly to the followings during the breaking-in period.

- Allow hydraulic equipment to warm up after the motor has started.
- Avoid overloaded operation or tasks with highspeed operation.
- Avoid sudden starting, sudden acceleration, unnecessary sudden stop or sudden steering

LEGAL INSPECTION

If periodic inspection for machine safety assurance is stipulated by laws and regulations of your country, perform inspection complying with the inspection items listed below.

- 1. Make sure no abnormal event is present in the safety devices.
- 2. Check the hoisting accessories including a hook block for any abnormalities.
- 3. Check the winch wire rope end and wire clip for breakage.
- 4. Replace the wire rope promptly if it is damaged.
- 5. Check the hydraulic hose for oil leaks and friction flaws on the surface. Replace the hose if a surface flaw is detected.
- 6. Check the structural part including a boom for cracks and deformations.
- 7. Check the mounting bolts and joints for looseness and falling off.
- 8. Check if the booms perform proper operation and stop in extending, retracting, raising, lowering, and slewing.

If check finds a malfunction, contact us or our sales service agency.

CONSUMABLES

Consumables such as a filter element and wire rope are to be replaced upon periodic maintenance or prior to the wear limit. Proper replacement of consumables delivers increased economy in machine use.

Always use Maeda genuine parts for part replacement.

See the parts catalogue for part numbers when ordering parts.

List of Consumables				
Item	Replacement cycle			
Hydraulic oil return filter replacement	Every 500 hrs (initial 50 hrs)			
Hydraulic oil replacement	Every 1,000 hrs (initial 50 hrs)			
Slewing gear oil replacement				
Winch gear oil replacement	Every 1,000 hrs			
Travelling gear oil replacement	(initial 250 hrs)			
Boom slide plate replacement				
Winch wire replacement				
Boom extending wire replacement	As necessary or every 3 years			
Boom retraction wire replacement				
Cylinder seal replacement				

The remaining time until replacement of consumables displayed on the monitor is based on operating time. Replace items when they are depleted or worn, even if the indicated replacement time is not reached.

Contact us or our sales service agency for part replacement.

5-12 12/2022 MC305CB-3

PERIODIC REPLACEMENT OF IMPORTANT PARTS

Parts related to safety and fire hazards (listed as important parts below) should be replaced periodically to ensure safe use of the machine over extended periods.

These parts are susceptible to material variations, wear, and deterioration over time, but as their condition is difficult to assess in periodic inspections, they must be replaced at preset intervals to ensure that optimum functionality is maintained even if no abnormalities are observed.

These parts must be repaired or replaced if any abnormalities are observed, even before the specified replacement interval has elapsed.

For hoses, the associated clamps and O-rings should also be replaced at the same time if they show any signs of deformation, cracking, or deterioration.

[Important Parts List]

	-		
No.	Periodic Replacement Part	Quantity	Replacement Interval
1	Hydraulic hose (rotating parts)	7	
2	Hydraulic hose (fixed parts)	16	
3	Hydraulic hose (pump line)	7	
4	Hydraulic hose (pilot line)	5	Every 2 years or 4,000 hours, whichever is sooner
5	Hydraulic hose (tank drain line)	13	riodis, willonevel is sooner
6	Hydraulic hose (travel line)	4	
7	Hydraulic hose (outrigger line)	24	

LUBRICATING OIL

Use of lubricating oil should vary with changes in temperature.

Lubricati	ing place	Type of oil		Use by temperature						Specified capacity	Volume to replace									
Lubricati	ing place	Type of oil	-3	0 -	20	-10	0	1	0 2	20 3	30	40	50 ℃	(liter)	(liter)					
L la calca a call	Wear resistant			ISO VG32																
Hydrauli	c oil tank	Hydraulic oil			ISO VG46			60	44											
Swing i	reducer													0.6	0.6					
Winch	reducer			Gear oil		- Gear oil	- Gear oil						20	V/G	200				0.75	0.75
Travel	Left	Gear oil	Geal oil					Gear on		Gear oil						5 0	VG	320		
reducer Right												0.7	0.7							

Fig. 5-16

The machine is shipped with ISO VG32 hydraulic oil. When replenishing with oil of a different grade, be sure to replace all of the oil.

5-14 12/2022 MC305CB-3

STANDARD TIGHTENING TORQUE

Bolt and Nut Tightening Torque

Torque metric bolts and nuts with no specific indication to the values shown in this table.

Adequate tightening torque is determined with respect to the width across the flat (b) of the bolt or nut.

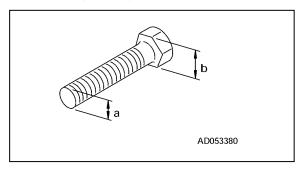

Fig. 5-17

Bolts Marked with 8.8 (Strength Classification) on Head

Nominal Size (Mark "a")	Width Across Flat (Mark "b")	Target	t Value	Tolera	ance
mm	mm	N∙m	kgf∙m	N·m	kgf∙m
6	10	7.8	0.80	6.8-9.0	0.70-0.92
8	13	19.0	1.95	16.5-21.9	1.70-2.24
10	17	37.5	3.85	32.6-43.1	3.35-4.43
12	19	65.5	6.70	57.0-75.3	5.85-7.70
14	22	104	10.6	90.4-120	9.2-12.2
16	24	163	16.6	142-187	14.4-19.1
18	27	224	22.8	195-258	19.8-26.2

36	55	732	74.5	636-842	64.8-85.7

Hose Connector Tightening Torque

Unless otherwise indicated, tighten hose connectors using the torque values shown in the following table:

Determine the appropriate tightening torque based on the hose connector width across flats (a).

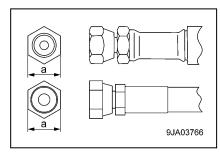

Fig. 5-18

Hose No.	Width Across Flat (Mark "a")	Target value		Toler	rance
-	mm	N•m	kgf•m	N•m	kgf•m
02	19	44	4.5	35-54	3.5-5.5
02	22	74	7.5	54-93	5.5-9.5
03	24	78	8.0	59-98	6.0-10.0
04	27	103	10.5	84-132	8.5-13.5
05	32	157	16.0	128-186	13.0-19.0
06	36	216	22.0	177-245	18.0-25.0

MACHINERY COVER

WARNING!

- Turn the starter switch to the "OFF" position before removing the machinery covers.
- Do not remove the machinery covers while the machine is still hot (e.g., immediately after operation).
- Do not remove the machinery covers in a location where the machine may get wet (e.g., when it's raining).

Removing Machinery Cover

Remove the machinery cover with the following procedure when performing inspection/maintenance inside the machinery cover.

- Open all of the outriggers to an angle to allow removal of the machinery covers.
- Remove the 10 retaining bolts (3) from the left-hand machinery cover (1) and right-hand machinery cover (2).

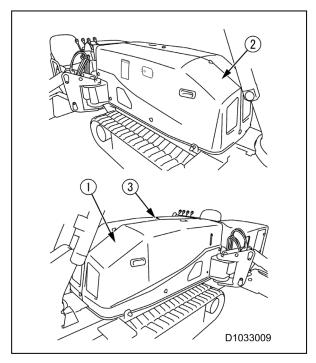

Fig. 5-19

Four retaining bolts at the top and six at the sides (three each on the left and right) are used to tighten with the machinery cover.

- 3. Pull the left-hand machinery cover (1) to the side to remove.
- 4. Pull the right-hand machinery cover (2) to the side to remove.

Installing Machinery Cover

When you finished inspection/maintenance in the machinery cover, install the machinery cover using the following procedure.

- 1. Reattach the right-hand machinery cover (2) in its original position.
- 2. Reattach the left-hand machinery cover (1) in its original position.
- 3. Securely tighten the 10 retaining bolts on the left-hand machinery cover (1) and right-hand machinery cover (2).
- 4. Rotate all outriggers back inward to stow.

5-18 12/2022 MC305CB-3

REAR COVER

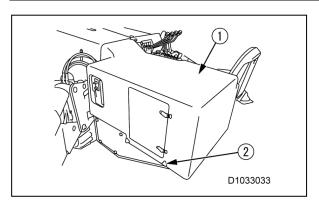

Fig. 5-20

Removing Rear Cover

Remove the rear cover as follows when performing inspection or maintenance inside the rear cover.

- 1. Remove the eight retaining bolts (2) from the rear cover (1).
- 2. Remove the rear cover (1).

Installing Rear Cover

Once inspection and maintenance inside the rear cover is complete, reattach the rear cover as follows:

- 1. Reattach the rear cover (1) at its original position.
- 2. Securely tighten the eight retaining bolts (2) on the rear cover (1).

FUSES

CAUTION: Be sure to turn the starter switch to the "OFF" position when checking or replacing a fuse.

CAUTION: Fuses protect electrical components and wires from being burnt out.

- Fuses are blade fuses. If a fuse was corroded and shows white powder, be sure to change the fuse.
- If a fuse has melt down, always check the cause in the circuit and repair the problem before changing the fuse.
- Always use a glass fuse of the same capacity when replacing one.

The fuse box is provided at the lower section of the instrument panel.

Check and replace a fuse using the procedure below.

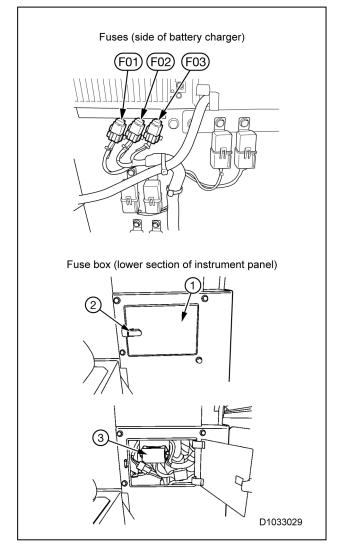

Fig. 5-21

- 1 Cover
- 2 Buckle
- 3 Fuse box

[FUSE CAPACITY AND CIRCUIT NAMES]

The table below shows the fuse system and its capacity.

• Side of battery charger

No.	Capacity	Circuit name
15 A		Starter switch
F01	15 A	(Spare)
F02	15 A	Motor controller, monitor, main controller, sub controller, BMU power supply
	15 A	(Spare)
F03	10 A	BMU, motor controller power supply
	10 A	(Spare)

· Inside fuse box

Index	Capacity	Circuit name
Α	10 A	Sub controller, monitor, I/O module
В	10 A	Operation selector switch, outrigger unload
С	5 A	Emergency stop, override, IGN signal
D	10 A	Horn
Е	20 A	Moment limiter, remote control system, inclination sensor
F	20 A	Outrigger select
G	5 A	(Spare)
Н	10 A	(Spare)
I	20 A	(Spare)

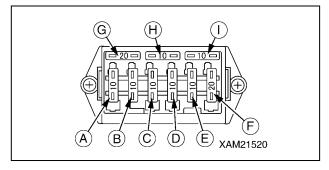

Fig. 5-22

INSPECTION

Pre-Start and Post-Start Inspection Items

Inspection Item	Reference
Pre-Start - Visible Checks Before Starting the	e Machine
Check Around Crane	See "Crane" on page 5-23.
Check Wire Ropes	See "Wire Ropes" on page 5-23.
Check Hook Block	See "Hook Block" on page 5-23.
Check Around Outriggers	See "Outriggers" on page 5-24.
Check Undercarriage Parts	See "Undercarriage Parts" on page 5-24.
Check Around Travelling Dolly	See "Travelling Dolly" on page 5-24.
Check Around Battery	See "Battery" on page 5-24.
Check Around Travel and Crane Operation Section	See "Travel and Crane Operation Section" on page 5-24.
Check Electric Wiring	See "Electric Wiring" on page 5-24.
Check / Add Hydraulic Oil	See "Check / Add Hydraulic Oil" on page 5-25.
Check / Refill Oil Level in Slewing Reduction Gear Case	See "Check / Refill Oil Level in Slewing Reduction Gear Case" on page 5-26.
Check / Refill Oil Level in Travelling Motor Reduction Gear Case	See "Check / Refill Oil Level in Travelling Motor Reduction Gear Case" on page 5-26.
Post-Start - After Starting the Machine	
Check Horn	See "Check Horn" on page 5-27.
Check Working Light	See "Check Working Light" on page 5-27.
Check / Adjust Rubber Track Tension	See "Check / Adjust Rubber Track Tension" on page 5-27.
Inspection of Rubber Tracks	See "Inspection of Rubber Tracks" on page 5-29.
Check Outrigger Safety Device for Operation	See "Check Outrigger Safety Device for Operation" on page 5-30.
Check Outrigger Operation	See "Check Outrigger Operation" on page 5-32.
Check Crane Operations	See "Check Crane Operations" on page 5-33.
Check Over Winding Detector Operation	See "Check Over Winding Detector Operation" on page 5-34.
Check Emergency Stop Switch Operation	See "Check Emergency Stop Switch Operation" on page 5-34.
Check Moment Limiter Operation	See "Check Moment Limiter Operation" on page 5-35.
As Required	
Replace Rubber Tracks	See "Replace Rubber Track" on page 5-49.
Replace Winch Wire Rope	See "Wire Rope" on page 5-50.
Check Wire Rope - Boom Telescope Extension	See "Check / Adjust Boom Telescoping Wire Rope" on page 5-55.
Contaminant Water and Sediment Drainage From Inside the Hydraulic Oil Tank	See "Contaminant Water and Sediment Drainage From Inside the Hydraulic Oil Tank" on page 5-58.

Pre-Start Visible Checks

WARNING!

- This machine has a battery unit.
- Buildup of combustibles and oil leakage around the battery can cause fire in the machine.
 Carefully check around these areas. Should you find any abnormality, be sure to fix it or contact us or our sales service agency.

Remove the machinery covers and inspect.

Visually inspect the machine exterior and underside for loose bolts and oil leaks, and inspect the crane unit and hydraulic system.

Inspect the electrical cables for slack or play, and check for any dust accumulation in parts that get hot. The details described here should be performed before starting the machine each day.

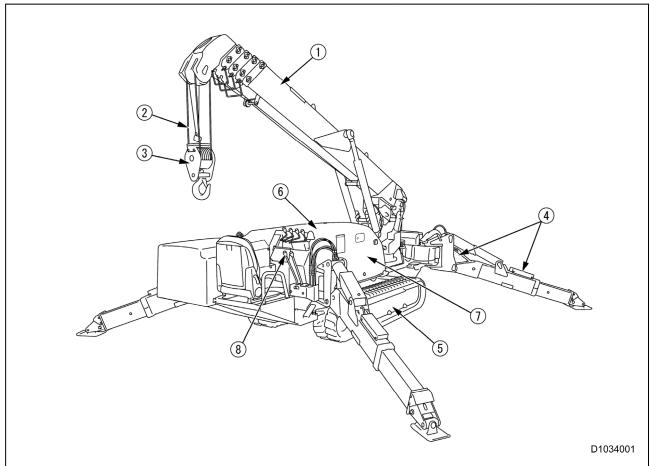

Fig. 5-23

5-22 12/2022 MC305CB-3

Crane

- Look around and below the boom and post and look for any oil leak or similar. Be especially careful to check up the derrick cylinder and lower part of the winch motor near the post. If you find any abnormality, repair.
- Check each part of the post for cracks, excessive deformation, contamination and others. In addition, check bolts, nuts, pins and piping joints for any looseness, drop, damage and other matters. Be especially careful to check for looseness of decelerator mounting bolt of the post, slewing ring or slewing device. If you find any abnormality, repair.
- Check each part of the boom for cracks, excessive deformation, contamination and others. In addition, check bolts, nuts, pins and piping joints for any looseness, drop, damage and other matters. Be especially careful to check for excessive abrasion and damage of the boom support pin or derrick support pin. If you find any abnormality, repair.
- Check for excessive damage and deformity of the over hoist weight wire rope of the over winding detector at the tip of the boom. If there is any abnormality, repair.
- Check for sagged electrical wire, loosened connection and trace of burns. If you find any abnormality, repair.
- Check if the boom angle limit switch works properly or not. If any abnormality is found, repair.

Wire Ropes

For more information on wire ropes, see "Wire Rope" on page 5-50.

- Check the wire ropes for damage, deformation, wear, twists, kinks, corrosion, etc. If you find any abnormality, replace
- Check the bound condition of the wire rope ends. If you find any loosened wire rope end, replace.
- Check for irregular winding of the wire ropes (wind drum). If you find any irregular winding, rewind.
- Check each section of wedge socket for cracks, bent, damage, and wear on support pins. If you find any abnormality, repair.

 Check each section of wedge socket for loose bolts and the support pin retaining plate, loose rope cloip, and loose rope wedge. If they are loose, retighten them.

Hook Block

 Verify that the wire rope latch (1) functions normally. If there is any abnormality, repair.

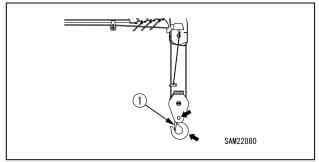

Fig. 5-24

- Rotate the hook and verify that the hook rotates smoothly and that trunnion does not emit any abnormal sound.
 - If there is any abnormality, repair.
- Check the hook for any crack or excessive deformation.
 - If there is any abnormality, repair.
- If dimension (a) between the punch marks punched on the hook became "105 mm or more" or the hook lower part dimension (b) became "49.5 mm or less", replace the hook.

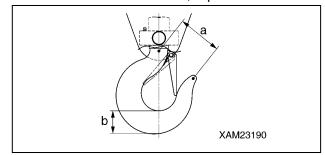

Fig. 5-25

Outriggers

- Look below each of the outriggers and check for any oil leak or similar. Be especially careful to check below the outrigger cylinders. If you find any abnormality, repair.
- Check each of the rotaries, outriggers, holders and outrigger cylinders for cracks, excessive deformation, contamination and others. In addition, check bolts, nuts, pins and piping joints for any looseness, drop, damage and other matters. If you find any abnormality, repair.
- Check for sagged electrical wire, loosened connection and trace of burns. If you find any abnormality, repair.
- Pull out the position pin of each of the outriggers, rotate the relevant rotary and verify that the operation is smooth.
 If you find any abnormality, repair.

Undercarriage Parts

Check each of the frames, rubber tracks, rollers, idlers and sprockets for cracks, excessive deformation, contamination and others. In addition, check bolts, nuts and pins for any looseness, drop, damage and other matters. If you find any abnormality, repair.

Travelling Dolly

- Look around and below the machine and check bolts, nuts, pins and piping joints for any looseness, drop, damage and other matters. If you find any abnormality, repair.
- Look around and below the machine and look for any oil leak or similar. Be especially careful to check below the operation oil tank, travel/crane operation section and each travelling motor. If you find any abnormality, repair.
- Look around and below the Machine and check for breakage, excessive deformation, contamination and similar of lights such as the outrigger un-set warning lamp and working status lamp. If you find any abnormality, repair.
- Look around and below the machine and check for sagged electrical wire, loosened connection and trace of burns. If you find any abnormality, repair.
- Check each of the frames, machinery covers, rear cover and other parts for cracks, excessive deformation, contamination and others. If you find any abnormality, repair.

Battery

- Check for any accumulation or deposits of inflammable items including leaves, wastepaper, dust, oil, or grease around the battery. Remove any accumulations or deposits.
- Check the electric motor and electric wiring for slackness and connections for looseness, and also check if there are any traces of burning.
 Repair if any abnormality is found.

Travel and Crane Operation Section

- Verify that all of the operation levers, travelling levers, travelling lock lever and acceleration pedal operate smoothly.
 If you find any abnormality, repair.
- Check the moment limiter display and the monitor panel on the instrument panel for damages and dirtiness. If you find any abnormality, repair. If dirty, clean.
- Verify that all of the switches on the outrigger operation panel operate smoothly.
 If you find any abnormality, repair.
- Check for sagged electrical wire, loosened connection and trace of burns. If you find any abnormality, repair.

Electric Wiring

 Check the electric wiring and inspect to ensure that wiring has not been disconnected, damaged, or burnt out, and that connectors are not disconnected.

5-24 12/2022 MC305CB-3

Check / Add Hydraulic Oil

WARNING!

- The machine parts will be hot immediately after the machine has been operated. Allow the oil to cool to below 45°C before replacing it.
- The oil may spout out when the cap of the hydraulic oil tank is removed.
 Turn the cap slowly to let the inner pressure escape before removing.
- The hydraulic oil level varies greatly depending on the oil temperature. As a guide, the oil level should be "H" on the oil gauge when the oil temperature is 50°C.
- Do not refill with the oil to the level higher than the "H" (upper limit) of the level gauge.
 Too much oil may cause the oil to spout out of the filter cap during travelling or crane operation, causing burns.
- Be careful not to let dust go in from the filler opening when refilling with oil.
- Securely close the tank cap after refilling with the oil.
 The tank cap may fall, and the hot oil may spout out, causing burns.

CAUTION:

- For more information on the which oil to be used, see "LUBRICATING OIL" on page 5-14.
- Be sure to put the machine in the travelling posture when checking the oil level.
 Checking the oil level in the working posture will cause overfilling since the oil in the cylinders has not returned to the tank.
- Be careful not to let dust go in from the filler opening when refilling with oil.
- 1. Stop the machine at levelled location.

2. Observe the oil level gauge (G) in the lefthand machinery cover to check that the oil level is between the "H" and "L" levels.

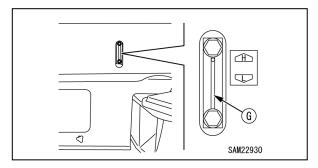

Fig. 5-26

- 3. If there is not sufficient oil, refill with the hydraulic oil using the following procedure.
 - (1) See "OUTRIGGER SETTING" on page 4-46 and rotate the outriggers outward.
 - (2) See "Removing Machinery Cover" on page 5-18 and remove the machinery cover.
 - (3) Remove the filler cap (F) on the top of the hydraulic oil tank.

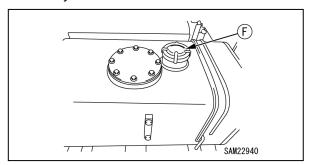

Fig. 5-27

- (4) Refill with the hydraulic oil from the filler opening (F) while looking at the oil level gauge (G).
- (5) Securely close the filler cap (F) after refilling with oil.
- (6) See "Installing Machinery Cover" on page5-18 and install the machinery cover.
- (7) See "OUTRIGGER STOWING" on page 4-54 and rotate the outriggers inward to stow them.

Check / Refill Oil Level in Slewing Reduction Gear Case

CAUTION:

- For more information on the which oil to be used, see "LUBRICATING OIL" on page 5-14.
- Use seal tape, etc. at the thread of the filler plug to stop the oil leak and securely tighten the plug after refilling with the oil.
- 1. Stop the machine at levelled location.
- Go under the machine and check the site gauge (G) for checking oil level in the slewing reduction gear case. Verify that the oil is filled up to the centre of the site gauge (G).

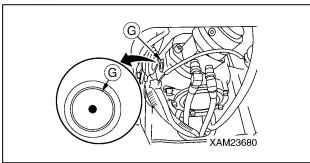

Fig. 5-28

- 3. If there is not sufficient oil, refill with the gear oil using the following procedure.
 - (1) See "OUTRIGGER SETTING" on page 4-46 to rotate the rotary of the "outrigger (2)" outward.
 - (2) Remove the filler plug (F) at the back of the post and pour in oil from the filler opening.

NOTICE: Pour in the oil to the centre of the site gauge (G) from the filler opening.

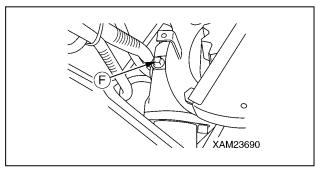

Fig. 5-29

- (3) After refilling with the oil, install the filler plug (F) and securely tighten the plug.
- (4) See "OUTRIGGER STOWING" on page 4-54 and rotate the rotary of the "outrigger (2)" inward and stow.

Check / Refill Oil Level in Travelling Motor Reduction Gear Case

CAUTION:

- For more information on the which oil to be used, see "LUBRICATING OIL" on page 5-14.
- Use seal tape, etc. at the thread of the oil level check plug to stop the oil leak and securely tighten the plug after refilling with the oil.
- Move the machine forward and backward so that one of the two drain plugs (P) of the travelling motor reduction gear case will come right under.
- Remove the oil level check plug (G) of the travelling motor reduction gear case to check if the oil will come out of the plug hole.
- If there is no sufficient oil, remove the top drain plug (P) and pour in gear oil from the plug hole.

NOTICE: Pour in the gear oil until the oil comes out of the oil level check plug (G).

 Install the oil level check plug (G) and upper drain plug (P) and securely tighten them after checking and refilling with the oil.

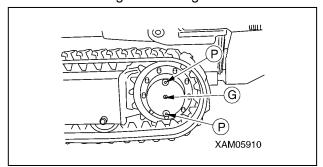

Fig. 5-30

5-26 12/2022 MC305CB-3

Post-Start Inspection - After Starting the Machine

Checking After Starting the Machine

Check the followings in this section after starting the machine and before starting the first work every day.

CAUTION: The checkups described in this section should be carried out after starting the machine.

See "STARTING THE MACHINE" on page 4-28 and later to execute the machine startup, travelling operations, outrigger operations and crane operations.

Check Horn

 Press the horn switch to verify that the horn sounds.

If the horn does not sound, it may be defective or a cable may be disconnected. Repair or replace.

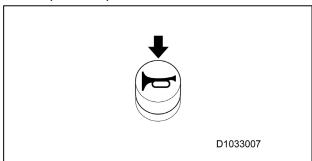

Fig. 5-31

Check Working Light

 Turn on the light switch on the monitor, and check that the working light lights up at the front of the machine.

If it does not light up, a bulb may have blown or a cable may be disconnected. Repair or replace.

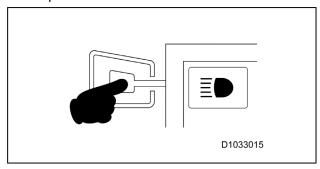

Fig. 5-32

Check / Adjust Rubber Track Tension CAUTION:

- Set the outriggers and raise the rubber track for about 50 mm from the ground when checking/adjusting the tension of the rubber tracks.
- The standard tension of the rubber track is that the clearance between the wheel tread of the track roller at centre and the shoulder of the rubber track is 5 to 10 mm.
- If the tension is not sufficient even after injecting the grease, the rubber track or the sealing of the tension adjustment cylinder needs to be changed.

The rubber tracks are worn out differently depending on the working conditions and soil quality. Regularly check the wear and tension of the rubber tracks.

Especially, with the new machine or when a new part was installed, "initial slack" appears with 5 to 30 hours of driving after adjusting the tension to the specified value.

Adjust the tension frequently until the period of "initial slack" passes. This will prevent "rubber track from coming off due to insufficient tension on the rubber track".

Tension Check

 Move the left and right crawlers so that the junction of the rubber track (indicated by M) comes to the top centre between the axles.

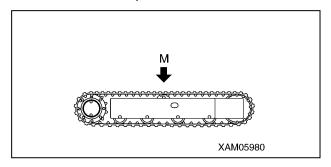

Fig. 5-33

- See "OUTRIGGER SETTING" on page 4-46 to set the outriggers and raise the crawlers for about 50 mm from the ground.
- Measure the clearance between the wheel tread of the track roller at centre and the shoulder of the rubber track.

NOTICE: The clearance of 5 to 10 mm indicates the standard tension.

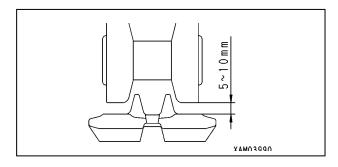

Fig. 5-34

4. If the tension is out of the standard range, see "Tension Adjustment" on page 5-28 to make adjustments.

Tension Adjustment

If the "tension check" of the rubber track found the tension lower than standard tension of the rubber track, make adjustments as described below.

Working with the loose rubber track (the tension of the rubber track at 15 mm or more) will cause run-off or early wear of the core metal.

Loose Tension (Increase Tension)

Have a grease gun (pump) ready.

1. Inject the grease from the grease valve (1) using the grease gun.

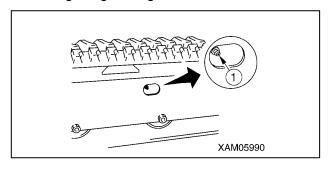

Fig. 5-35

- 2. Perform the following tasks to verify the proper tension.
 - (1) See "OUTRIGGER STOWING" on page 4-54 to stow the outriggers and lower the machine on the ground.
 - (2) Move the machine forward/backward.
 - (3) See "OUTRIGGER SETTING" on page 4-46 to set the outriggers and raise the crawlers again for about 50 mm from the ground.
- Perform the "tension check" of the rubber track again.
 If the tension is not appropriate, make another adjustment.
- See "OUTRIGGER STOWING" on page 4-54 to stow the outriggers and lower the machine on the ground.

Tight Tension (Decrease Tension)

WARNING! Inside the rubber track tension adjustment device has the grease sealed. The grease is under high pressure due to the tension of the rubber track.

Making adjustments without observing the followings may cause the grease valve to fly away, resulting in serious accidents.

- Do not loosen the grease valve for tension adjustment for more than 1 turn. The grease valve may pop out.
- Do not place yourself right in front of the grease valve when adjusting the tension to avoid any danger.
- 1. Slowly loosen the grease valve (1) to drain the grease.

NOTICE: When loosening the grease valve (1), do not loosen more than for one turn.

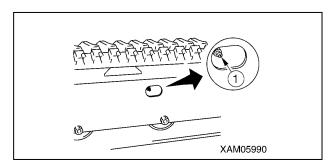

Fig. 5-36

- 2. If the grease is not drained easily, perform the following to drain the grease.
 - (1) See "OUTRIGGER STOWING" on page 4-54 to stow the outriggers and lower the machine on the ground.
 - (2) Move the machine forward/backward.
 - (3) See "OUTRIGGER SETTING" on page 4-46 to set the outriggers and raise the crawlers again for about 50 mm from the ground.
- 3. Tighten the grease valve (1).
- 4. Perform the "tension check" of the rubber track.
 - If the tension is not appropriate, make another adjustment.
- See "OUTRIGGER STOWING" on page 4-54 to stow the outriggers and lower the machine on the ground.

Inspection of Rubber Tracks

CAUTION: Contact us or our sales service agency for determining whether to replace, repair, or keep the rubber track.

The following condition requires the repair or replacement of the rubber track. Contact us or our sales service agency for repair/replacement.

Lug Height

 When the lug height "a" decreases with wear, the traction force drops.
 Replace the rubber track when the lug height decreases to 5 mm or lower with a new rubber track.

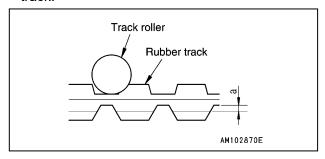

Fig. 5-37

 When the lug is worn out and the steel cord inside the rubber track is exposed for more than 2 links, replace the rubber track with a new one.

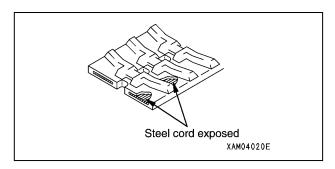

Fig. 5-38

Broken Steel Cord

If more than half of the steel cord layer is broken on one side, replace the rubber track with a new one.

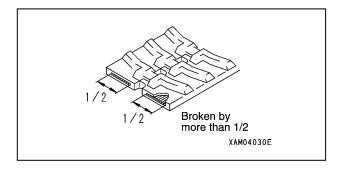

Fig. 5-39

Fallen Core Metal

If the core metal of the rubber track is fallen out at more than 1 location, change the rubber track with a new one.

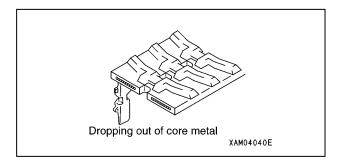

Fig. 5-40

Cracks

If there is a crack between rubber track lugs, change the rubber track with a new one.

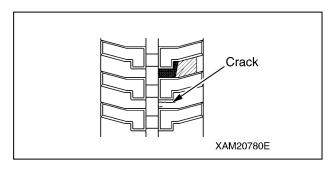

Fig. 5-41

Check Outrigger Safety Device for Operation

Checking Operation of Crane Interlock Function

 Operate the work selector switch on the outrigger operation Panel to the "OUTRIGGER" position.

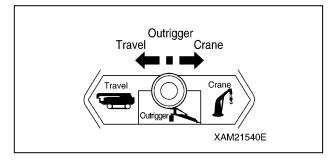

Fig. 5-42

- Verify that outrigger un-set warning lamp flashes and the working status lamp (red) lights up.
- Verify that only the boom stowing lamp (1) (green) remains ON on the outrigger display.

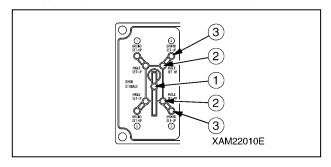

Fig. 5-43

 Rotate the rotary of all the four outriggers outward and properly insert the position pin (4).

Verify that all the extension lamps (2) light up on the outrigger display.

NOTICE: Verify that the position pin (4) is properly inserted after outrigger rotary extension operation.

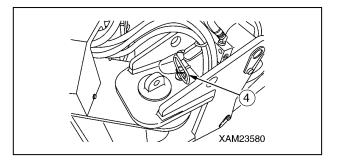

Fig. 5-44

5-30 12/2022 MC305CB-3

 Operate the outrigger setting switch (5) on the outrigger operation panel to "OUT" position and set all the four outriggers. Then set the tray securely.
 Verify that all the setting lamps (3) on the outrigger display light up.

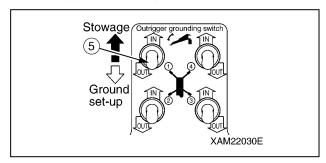

Fig. 5-45

CAUTION: If any of the setting lamps (3) is flashing in red, remove the cover (7) of the outrigger tray (6) and check if there is any foreign object engaged in the bending section.

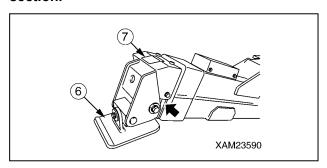

Fig. 5-46

6. Operate one of the four outrigger setting switches (5) to "ON" position and raise the outrigger tray above the ground.

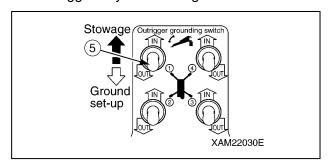

Fig. 5-47

Operate the work selector switch on the outrigger operation panel to the "Crane" position. 8. Operate the crane derricking lever to the "RAISE" side and verify that the crane does not operate.

NOTICE: Perform the tasks described in the steps 6 to 8 to all the four outriggers.

Checking Operation of Outrigger Interlock Function

- 1. Set all the four outriggers.
- Operate the work selector switch on the outrigger operation panel to the "Crane" position.

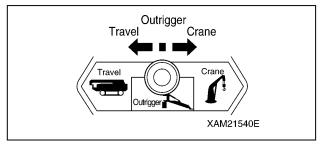

Fig. 5-48

 Operate the crane derricking lever to the "RAISE" side and raise the boom until the boom stowing lamp (1) on the outrigger display goes off.

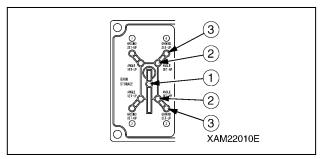

Fig. 5-49

- Operate the work selector switch on the outrigger operation panel to the "Outrigger" position.
- Operate the outrigger setting switch (5) on the outrigger operation panel to the "ON" position and verify that the outriggers do not operate.

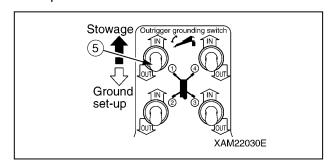

Fig. 5-50

Check Outrigger Operation

WARNING! Be sure to see "OUTRIGGER SETTING" on page 4-46 and "OUTRIGGER STOWING" on page 4-54, and strictly observe the methods described and cautions given when checking operations of the outriggers.

 Verify that the outrigger inner box extends smoothly when the outrigger extension switch is pushed down to the "OUT" position. Also, verify that the inner box retracts smoothly when the outrigger extension switch is pushed down to the "IN" position. When doing the above, check for any abnormal noise generated by part of the outrigger.

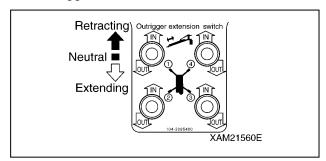

Fig. 5-51

Operate all other switches likewise and check the operations.

If there is any abnormality, repair.

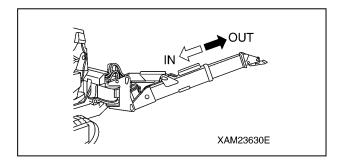

Fig. 5-52

Verify that the outrigger lowers smoothly when the outrigger setting switch is pushed down to the "OUT" position. Also, verify that the inner box rises smoothly when the outrigger setting switch is pushed down to the "IN" position.

When doing the above, check for any abnormal noise generated by part of the outrigger.

Operate all other switches likewise and check the operations.

If there is any abnormality, repair.

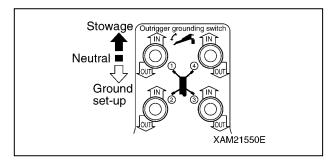

Fig. 5-53

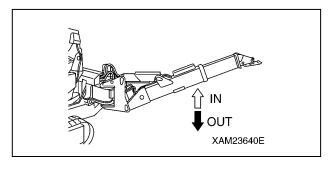

Fig. 5-54

3. Check that the outrigger display appears correctly on the moment limiter display.

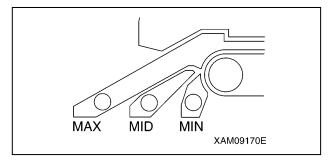

Fig. 5-55

NOTICE: When adjusting the outrigger extension, check the "MID" and "MAX" labels affixed to the top of the inner boxes.

5-32 12/2022 MC305CB-3

Check Crane Operations

WARNING! Be sure to set the outriggers by the maximum extension state by referring to "OUTRIGGER SETTING" on page 4-46 before checking the crane operations.

Be sure to see the "OPERATION" sections between "Before Crane Operations" on page 4-61 and "Crane Stowing Operation" on page 4-66, and strictly observe the methods described and cautions given when checking crane operations.

 Operate the winch lever (3) to "DOWN" side to leave the hook block from the stow position.

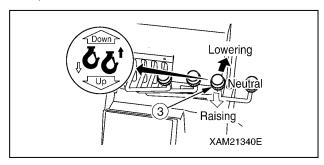

Fig. 5-56

2. Verify that the boom rises smoothly when the boom derricking lever (4) is operated to "RAISE" side (pull toward you).

Also, verify that the boom lowers smoothly when the boom derricking lever (4) is operated to "LOWER" side (push forward). When doing the above, check for any abnormal sound emitted by part of the boom or from the boom derrick cylinder. If there is any abnormality, repair.

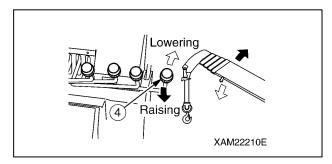

Fig. 5-57

the boom telescoping lever (2) is operated to "EXTEND" (push forward).

Also, verify that the boom retracts smoothly when the boom telescoping lever (2) is operated to "RETRACT" (pull toward you). When doing the above, check for any abnormal sound emitted by part of the boom or from the boom telescoping cylinder. If there is any abnormality, repair.

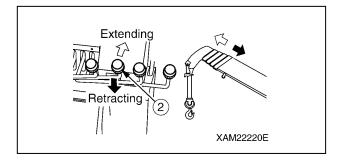

Fig. 5-58

4. Verify that the hook is wound down smoothly when the winch lever (3) is operated to "DOWN" (push forward).
Also, verify that the hook is wound up smoothly when the winch lever (3) is operated to "UP" side (pull toward you). When doing the above, check for any abnormal sound emitted by part of the boom or from the winch motor.
If there is any abnormality, repair.

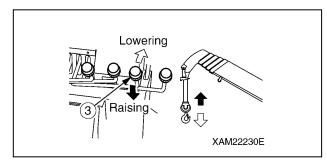

Fig. 5-59

5. Verify that the crane smoothly slews counterclockwise when the slewing lever (1) is operated to "LEFT" side (push forward). Also, verify that the crane smoothly slews clockwise when the slewing lever (1) is operated to "RIGHT" side (pull toward you). When doing the above, check for any abnormal sound emitted nearby the post. If there is any abnormality, repair.

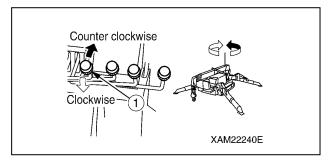

Fig. 5-60

Check Over Winding Detector Operation

Over wind the hook block (1), and raise the hook with winch and extend the boom, and verify that the buzzer sounds and an audible message saying "Over hoisted" is spoken, the hook raising operation and boom extending operation stop. If these events do not happen, the over winding detector may be faulty.

If the alarm does not stop, the over winding detector may be faulty or the circuit may be open.

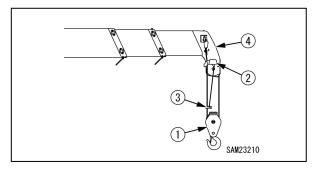

Fig. 5-61

NOTICE: If you do not hear the message from the speaker, check the volume of the remote control system.

Check Emergency Stop Switch Operation

Press the emergency stop switch and check to confirm that the machine stops.

If the machine does not stop, the switch may be defective or a cable may be disconnected.

NOTICE: To restart the machine, turn the emergency stop switch to "OFF". The machine will not operate in the "ON" position.

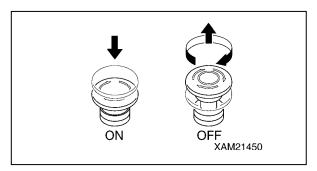

Fig. 5-62

5-34 12/2022 MC305CB-3

Check Moment Limiter Operation

WARNING! If you find any abnormality with the moment limiter, immediately contact us or our sales service agency.

- 1. Turn the starter switch to the "ON" position.
- 2. Check with the working status lamp. The red of the lamp lights up for 2 seconds and then the green lights up.
- Check the moment limiter display unit.
 Verify that no error code is displayed at the "RATED TOTAL LOAD" display on the display panel.
- 4. Start the machine and operate the crane as follows to verify if the moment limiter properly displays the value.

property displays the value.				
Crane Operation and Displayed Parameter	Value Displayed on Moment Limiter			
Displayed "boom length" with the boom length at minimum	3.7 m			
Displayed "boom length" with the boom length at maximum	12.5 m			
Displayed "working radius" with the boom length of "5.9 m" (2- row booms) and boom angle of "57°"	3.0 ± 0.1 m			
Displayed "ACTUAL LOAD" when the weight of the known weight was hoisted • Must be equal to the total weight of weight + rigging • Note that it may show some errors depending on the boom conditions.	Actual load			

5. Operate the crane until the moment limiter display values indicate the boom length is "5.9 m" (booms (1) + (2)) and boom angle is "57 degrees", then measure the "boom angle" and "working radius.
If the measured value(s) differ from the moment limiter display value, contact us or our sales agency.

PERIODIC MAINTENANCE

Periodic Maintenance Schedule

System	Operation	Initial		Periodic					
		10	50	250	50	250	500	1000	1500
Machine	Grease machine units	Х			Χ				
	Replace hydraulic oil return filter		Х				Х		
Hydraulic	Hydraulic Oil Tank Oil Replacement and Suction Filter Cleaning		Х					Х	
Slewing Gearcase	Replace oil in slewing reduction gearcase			Х				Х	
Winch Gearcase	Replace oil in winch reduction gearcase			Х				Х	
Travel Gearcase	Replace oil in travelling motor reduction gearcase			Х		Х		Х	
	Check/Refill oil in travelling motor reduction gearcase					Х			

5-36 12/2022 MC305CB-3

Periodic Maintenance Procedure

Initial 10 Hour Maintenance

The following maintenance should be performed after 10-hour operation, limited to the first maintenance of a new machine.

Greasing Machine Units
 See "Grease Machine Units" on page 5-38.

Initial 50 Hour Maintenance

The following maintenance should be performed after 50-hour operation, limited to the first maintenance of a new machine.

- Oil Replacement in Hydraulic Oil Tank
 See "Hydraulic Oil Tank Oil Replacement and Suction Filter Cleaning" on page 5-41.
- Replacement Hydraulic Oil Return Filter
 See "Replace Hydraulic Oil Return Filter" on page 5-40.

Initial 250 Hour Maintenance

The following maintenance should be performed after 250-hour operation, limited to the first maintenance of a new machine.

Oil Replacement Slewing Reduction Gear Case

See "Replace Oil in Slewing Reduction Gear Case" on page 5-43.

 Oil Replacement Winch Motor Reduction Gear Case

See "Replace Oil in Winch Reduction Gear Case" on page 5-44.

 Oil Replacement Travelling Motor Reduction Gear Case

See "Replace Oil in Travelling Motor Reduction Gearcase" on page 5-45.

Maintenance Every 50 Hours

Grease Machine Units

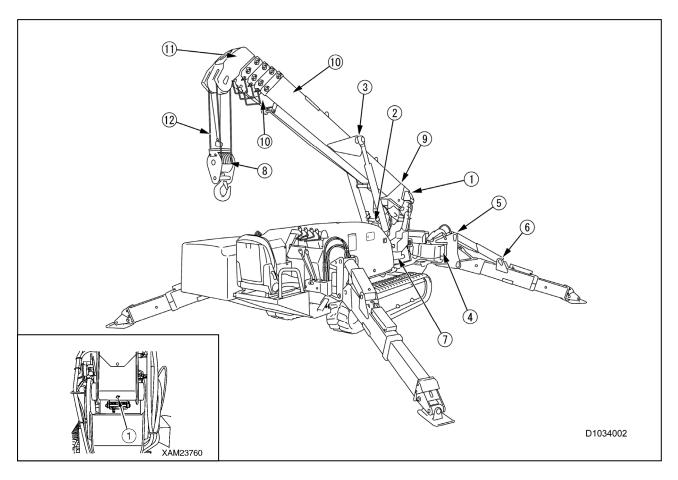

CAUTION:

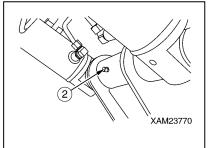

- Grease type varies with greasing points.
 Failure to grease properly may cause the machine to shorten its useful life. See the following table for grease types.
- Greasing a new machine is required once every 10 hours until the machine attains the first 100 hours of operation that initial fit emerges.
- Use proper grease specified below according to the greasing points.

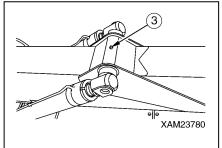

Nº	Greasing poin	Grease type		
1	Greasing of the boom mounting pin	1 place		
2	Greasing of the boom derricking cylinder bottom mounting pin	1 place		
3	Greasing of the boom derricking cylinder rod mounting pin	1 place		
4	Greasing of the outrigger rotary shaft	4 places		
5	Greasing of the mounting pin of the outrigger grounding cylinder bottom	4 places	Lithium grease	
6	Greasing of the mounting pin of the outrigger grounding cylinder rod	4 places		
7	Greasing of the slewing gear	1 place		
8	Greasing of the hook block	1 place		
9	Greasing of the boom slide plate	8 places	Neo grease	
10	Greasing of both sides and bottom of a boom	Each boom	(grease for boom)	
11	Greasing of the boom telescoping wire rope	2 pieces	Rope oil	
12	Greasing of the winch wire rope	1 piece	Tope oil	

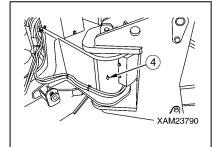

- With the use of the grease gun, grease the greasing points (No.1 to 9) specified in the above table through corresponding grease plugs. (See the following page)
- 2. Wipe off old grease squeezed out after greasing.
- 3. Place the outriggers when greasing the outrigger cylinders.
- 4. lace the boom derricking lever in the "Raise" position (pull it toward you) to raise the boom slightly for greasing the boom derricking cylinder mounting pin and slide plate that is located on top of the boom.
- Place the boom telescoping lever in the "Extend" position (push it toward the front) to extend the boom for greasing both sides and bottom of the boom and wire rope.
- Apply red rope grease to prevent wire rope abrasion and rust formation.
 With the rope surface cleaned, grease the rope with a brush.

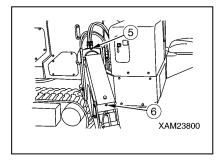

5-38 12/2022 MC305CB-3

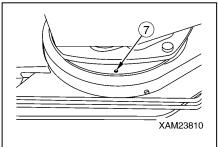

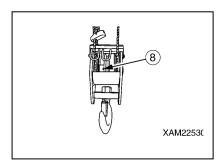

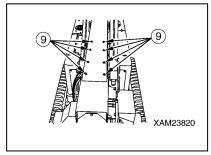

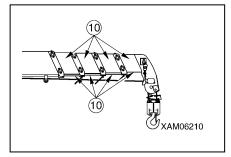

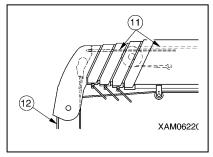

Fig. 5-63

Maintenance Every 250 Hours

Check / Refill Oil in Travelling Motor Reduction Gear Case

CAUTION:

- See "LUBRICATING OIL" on page 5-14 for which oil to be used.
- Use seal tape, etc. at the thread of the filler plug to stop the oil leak and securely tighten the plug after refilling with the oil.
- Move the machine forward and backward to position it immediately above the drain plug (P) of the travelling motor reduction gear case.

NOTICE: This machine is equipped with two drain plugs (P). Either drain plug must be positioned directly underneath the machine.

- 2. Remove the oil inspection plug (G) of the travelling motor reduction gear case, and make sure oil is drained from the plug hole.
- 3. In the case of insufficient oil in the casing, remove the top drain plug (P) and replenish gear oil through the plug hole.

NOTICE:

- Replenish the gear oil until it exudes from the oil inspection plug.
- · Wipe off the oil completely if spilled.
- Put in the top drain plug (P) and oil inspection plug (G), and secure the plugs upon completion of oil inspection and replenishment.

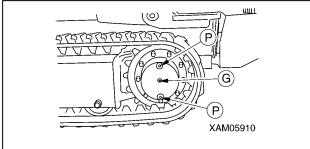

Fig. 5-64

Maintenance Every 500 Hours

Replace Hydraulic Oil Return Filter

WARNING!

- All the parts will be at elevated temperatures immediately after machine operation, which urges you not to replace the filter. Always perform replacement with the oil cold. (Oil temperature not exceeding 45°C)
- Potential gush of oil may occur upon removing the filler cap of the hydraulic oil tank.
 - Be sure to relieve internal pressure by slowly rotating the filler cap before cap removal.
- The hydraulic oil level varies greatly depending on the oil temperature. As a guide, the oil level should be "H" on the oil gauge when the oil temperature is 50°C.
- Oil replenished should remain below "H" (upper limit) on the level gauge. Excessive oil replenishment may cause the oil to gush from the filter cap during machine travelling and crane operation, which could result in burns.
- Make sure the filler cap is closed properly after replenishment of the oil.
 Potential fall of the filler cap during operation may occur if disregarded, which could cause boiling oil to gush that results in burns.

CAUTION:

- See "LUBRICATING OIL" on page 5-14 for which oil to be used.
- Place the machine in travel position for oil quantity inspection.
 Oil quantity inspection with the machine in working position may deceive your eyes to deem the quantity of oil low. Owing to improper judgment, the oil may be supplied at an excessive amount.
- The machine must be at halt until piping and hydraulic equipment is filled with oil after replacement of the hydraulic oil filter.
- Keep impurities out of the filler cap when replenishing oil.
- 1. Place the machine on a level surface.
- See "OUTRIGGER SETTING" on page 4-46 and rotate the outriggers outward.

- 3. See "Removing Machinery Cover" on page 5-18 and remove the machinery cover.
- 4. Turn the filter cartridge (3) counterclockwise (left) with the use of the filter wrench to remove it.

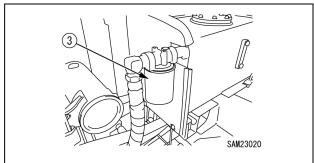

Fig. 5-65

5. Clean the filter stand. Apply clean oil (or a light coating of grease) to the gasket and thread part of a new filter cartridge (3), and attach the filter cartridge.

NOTICE: With the gasket surface maintained contact with the sealing surface of the filter stand, rotate the filter cartridge one-half to three-quarters of a turn to secure it.

Always give manual tightening to the filter cartridge.

- 6. Check around the filter cartridge (3) for oil leaks. Be sure to wipe off oil completely if spilled.
- See "Check / Add Hydraulic Oil" on page 5-25 to check the oil level in the hydraulic oil tank. Prompt oil refilling is required if check finds insufficient oil.
- 8. See "Installing Machinery Cover" on page 5-18 and install the machinery cover.
- See "OUTRIGGER STOWING" on page
 4-54 and rotate the outriggers inward to stow them.

Maintenance Every 1000 Hours

Hydraulic Oil Tank Oil Replacement and Suction Filter Cleaning

WARNING!

- All the parts will be at elevated temperatures immediately after machine operation, which urges you not to replace oil. Always perform replacement with the oil cold. (Oil temperature not exceeding 45°C)
- Potential gush of oil may occur upon removing the filler cap of the hydraulic oil tank.
 - Be sure to relieve internal pressure by slowly rotating the filler cap before cap removal.
- The hydraulic oil level varies greatly depending on the oil temperature. As a guide, the oil level should be "H" on the oil gauge when the oil temperature is 50°C.
- Oil replenished should remain below "H" (upper limit) on the level gauge. Excessive oil replenishment may cause the oil to gush from the filter cap during machine travelling and crane operation, which could result in burns.
- Make sure the filler cap is closed properly after replenishment of the oil.
 Potential fall of the filler cap during operation may occur if disregarded, which could cause boiling oil to gush that results in burns.

CAUTION:

- See "LUBRICATING OIL" on page 5-14 for which oil to be used.
- Place the machine in travel position for oil quantity inspection.
- Oil quantity inspection with the machine in working position may deceive your eyes to deem the quantity of oil low. Owing to improper judgment, the oil may be supplied at excessive amount.
- The machine must be at halt until piping and hydraulic equipment is filled with oil after replacement of the hydraulic oil filter.
- Keep impurities out of the filler cap when replenishing oil.

- Oil drain pan: A 70 L container
- · Quantity of oil for replacement: 44 L
- 1. Place the machine on a level surface.
- 2. See "OUTRIGGER SETTING" on page 4-46 and rotate the outriggers outward.
- 3. See "Removing Machinery Cover" on page 5-18 and remove the machinery cover.
- 4. Remove the filler cap (F) located on top of the hydraulic oil tank.

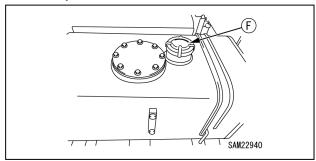

Fig. 5-66

5. Place a drain pan directly underneath the drain plug (P) to receive drained oil.

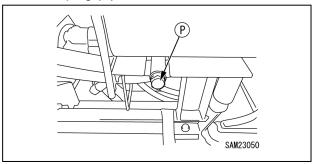

Fig. 5-67

- Remove the drain plug (P) slowly to drain the oil, keeping from contact with draining oil.
- Check the drained oil. If check finds a considerable amount of metal powder and foreign objects, contact our sales service agency
- 8. Put in the drain plug (P) and secure it.
- 9. Remove the eight mounting bolts (4) and remove the flange (3) on top of the hydraulic oil tank.

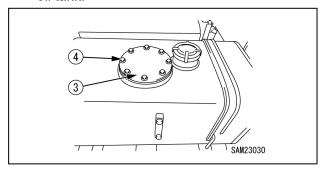

Fig. 5-68

10. Remove the flange (3) on top of the hydraulic oil tank, and remove the suction filter (5).

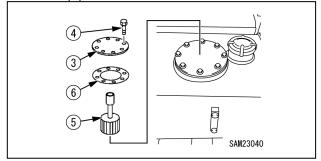

Fig. 5-69

11. Clean the suction filter (5), and reinstall it inside the tank.

NOTICE: Replace the filter if it is damaged or if clogging cannot be removed by cleaning.

- 12. Put the flange (3) in place with liquid packing applied to the rubber plate (6). Secure the flange (3) with the eight mounting bolts (4).
- 13. Supply the hydraulic oil to a specified level point from the filler cap (F), visually checking the oil level gauge (G).

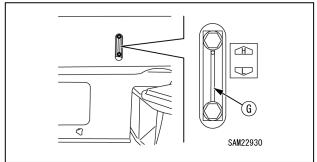

Fig. 5-70

14. Close the filler cap (F) after replenishment of the oil.

NOTICE: Wipe off the oil completely if spilled.

- 15. See "Installing Machinery Cover" on page 5-18 and install the machinery cover.
- 16. Use the following procedure for air bleed.
 - Start the machine with piping and hydraulic equipment filled with oil.
 Warm up for 10 minutes after starting the machine.
 - (2) Operate each of the crane operation levers a small amount to operate the cylinders and winch motor slowly without using the acceleration pedal. Always stop the boom derricking cylinder and telescoping cylinder approx. 100mm back from the stroke end when operating the cylinders.

Repeat this task 4 to 5 times.

- (3) Allow all the outriggers to be extended, referring to "OUTRIGGER SETTING" on page 4-46. Extend and retract the outrigger cylinder, keeping the machine down on the ground.

 Always stop the outrigger cylinder approx. 100mm back from the stroke end when operating the cylinder.

 Repeat this task 4 to 5 times.
- 17. See "OUTRIGGER STOWING" on page 4-54 to stow the outriggers.

Replace Oil in Slewing Reduction Gear Case

WARNING! The drain plug of the slewing reduction gear case is located directly underneath the machine.

Place the outriggers and raise the machine 50 mm from the ground to allow a drain pan to be placed under the machine for draining oil. If the machine becomes unstable and wobbles, insert supports under the front and back of the machine to gain stability.

CAUTION:

- See "LUBRICATING OIL" on page 5-14 for which oil to be used.
- Use seal tape, etc. at the thread of the filler plug to stop the oil leak and securely tighten the plug after refilling with the oil.
- Oil drain pan: A 1.0-L container
- · Quantity of oil for replacement: 0.6L
- 1. Place the machine on a level surface.
- See "OUTRIGGER SETTING" on page 4-46 to rotate the rotary of the all outriggers outward.

WARNING! Check the following before crawling under the machine:

- Ensure that the outriggers are extended at the maximum.
- Visually check the level to make sure the machine in a horizontal position.
- Insert solid blocks between the crawler and the ground to keep the machine raised.

WARNING! Check the following before crawling under the machine:

- Ensure that the outriggers are extended at the maximum.
- Visually check the level to make sure the machine in a horizontal position.

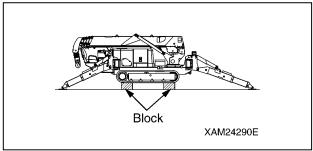

Fig. 5-71

3. Remove the filler plug (F) from the slewing reduction gear case.

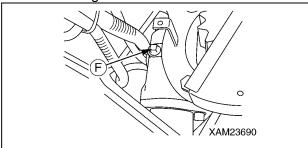

Fig. 5-72

 Crawl under the machine and place a drain pan directly underneath the drain plug (P) of the slewing reduction gear case to receive drained oil.

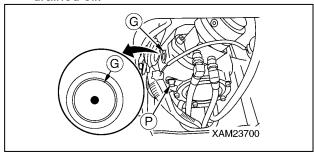

Fig. 5-73

- Remove the drain plug (P) slowly to drain the oil, keeping from contact with draining oil.
- Check the drained oil. If check finds a considerable amount of metal powder and foreign objects, contact our sales service agency.
- 7. Put in the drain plug (P) and secure it.
- 8. Supply the gear oil to the slewing reduction gear case through the filler plug (F).

NOTICE:

- The gear oil must be filled from the filler cap, up to the midpoint of the site gauge (G).
- · Wipe off the oil completely if spilled.
- 9. Put in the filler plug (F) and secure it after oil replacement.
- 10. See "OUTRIGGER STOWING" on page 4-54 to stow the outriggers.

Replace Oil in Winch Reduction Gear Case

WARNING! Oil will be at elevated temperatures immediately after machine operation, which urges you not to unplug the inspection port and drain port. Unplug the port with the oil cold.

CAUTION:

- See "LUBRICATING OIL" on page 5-14 for which oil to be used.
- Use seal tape, etc. at the thread of the plug to stop the oil leak and securely tighten the plug after refilling with the oil.
- Oil drain pan: A 1.0-L container
- · Hexagonal wrench for plug removal: 8mm
- · Quantity of oil for replacement: 0.75L
- 1. Place the machine on a level surface.
- See "OUTRIGGER SETTING" on page 4-46 to rotate the rotary of the "outrigger (1)" outward.
- 3. Slowly rotate the winch until the plug (P) is visible, and once the plug (P) is visible, set the plug (P) to the lowest position.

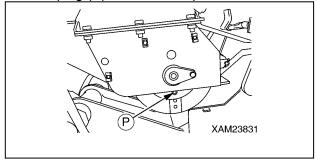

Fig. 5-74

- 4. Place a drain pan directly under the plug (P) to receive drained oil.
- Use the hexagonal wrench to remove the plug (P). The gear oil is drained from the winch reduction gear case upon plug removal.

5-44 12/2022 MC305CB-3

6. Once the gear oil is fully drained out of the winch reduction gear case, rotate the winch slowly until the plug (P) hole is visible through the hole above the pin.

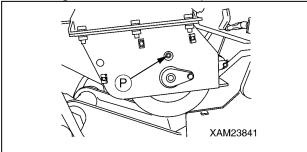

Fig. 5-75

7. Replenish the standard amount (0.75 L) of gear oil using an oil pump or similar tool through the plug (P) hole.

NOTICE: Wipe off the oil completely if spilled.

- 8. Put in the plug (P) and secure it upon completion of oil replenishment.
- 9. See "OUTRIGGER STOWING" on page 4-54 to stow the "outrigger (1)".

Replace Oil in Travelling Motor Reduction Gearcase

CAUTION:

- See "LUBRICATING OIL" on page 5-14 for which oil to be used.
- Use seal tape, etc. at the thread of the filler plug to stop the oil leak and securely tighten the plug after refilling with the oil.
- Oil drain pan: A 1.0-L container
- · Quantity of oil for replacement: 1.0L
- 1. Place the machine on a level surface.
- Move the machine backward and forward until one of the two drain plugs (P) on the travelling motor reduction gear case is at the very bottom.

NOTICE: This machine is equipped with two drain plugs (P). Either drain plug must be positioned directly underneath the machine.

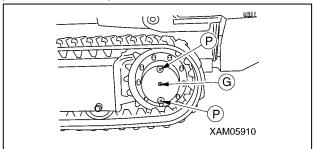

Fig. 5-76

- 3. Place a drain pan directly under the lower drain plug (P) to receive drained oil.
- 4. Remove the upper drain plug (P) and oil inspection plug (G).
- Remove the lower drain plug (P) slowly to drain the oil, keeping from contact with draining oil.
- Check the drained oil. If check finds a considerable amount of metal powder and foreign objects, contact our sales service agency.
- 7. Put in the lower drain plug (P) and secure it.
- 8. Supply the gear oil to the travelling motor reduction gear case through the upper drain plug hole (P).

NOTICE: Pour in the gear oil until the oil comes out of the oil level check plug (G).

9. Put in the upper drain plug (P) and oil inspection plug (G), and secure them after oil replenishment.

NOTICE: Wipe off the oil completely if spilled.

GENERAL MACHINE MAINTENANSE

Rubber Tracks

General Information and Precautions Good Use

While the rubber tracks demonstrate many advantages thanks to its performance characteristic to the material, it has a weak point in strength.

Therefore, we would like you to sufficiently understand the characteristics of the rubber tracks and to respect don'ts operations and observe the cautions on handling so that the life of the rubber tracks can be extended and its advantages exercised.

Be sure to read "Dos and Don'ts" on page 5-46 and "Cautions in Using Rubber Tracks" on page 5-47 before using the machine.

Warranty

Verification of proper tension of the rubber tracks, maintenance of rubber tracks, and damage caused by the fault of customers such as not respecting don'ts operation or not observing cautions in working, for example, "worked at the site where there were objects that may tear the rubber blocks, such as steel plates, U-shaped gutters, corners of bricks, corners of sheer broken stones and rocks, reinforcing steels, and iron scraps", are not covered by warranty.

Dos and Don'ts

The following operations are prohibited.

 Working and slewing on the ground with broken stones, hard rock ground with great irregularity, reinforcing steels, iron scraps, and near the edge of the steel plates will damage the rubber tracks.

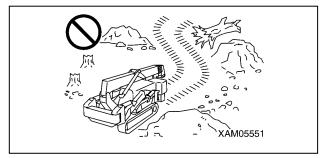

Fig. 5-77

5-46 12/2022 MC305CB-3

 At the location where there are great amount of large and small boulder stones such as river beds, the stones will go under the machine, tending to damage the rubber tracks or the rubber tracks tend to come off.

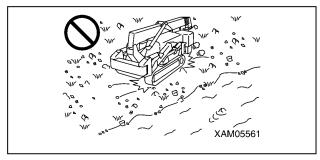

Fig. 5-78

 Keep the oil and chemical solvents away from the rubber tracks.

If these materials come in contact with the rubber tracks, wipe it off immediately.

Do not TRAVEL over the road surface where the oil has built up.

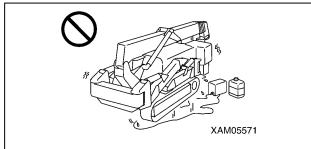

Fig. 5-79

 Do not go in the area where it is hot such as with open fire, the steel plate left under the burning sun, or newly poured asphalt.

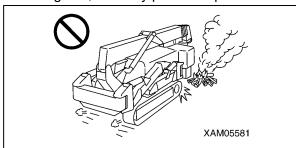

Fig. 5-80

 Keep the rubber tracks indoor where there is no direct sunlight or rain when storing them.

Cautions in Using Rubber Tracks

WARNING! Not observing these cautions in using rubber tracks will cause serious accidents or damage on rubber tracks.

Keep the followings in mind during the operation.

 Avoid making spin turns on the concrete surface.

Sudden steering cause early wear or defect on the rubber tracks. Avoid making sudden steering whenever possible.

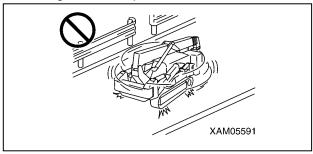

Fig. 5-81

 Do not operate the machine in a way that the edge of the rubber tracks is pressed against the concrete and walls.

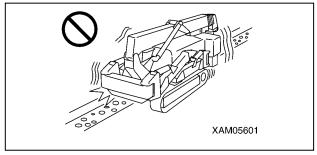

Fig. 5-82

 Avoid steering at the location with a great step.
 Make the machine perpendicular to the step when going over it.

Going over the step diagonally may result in the rubber tracks coming off.

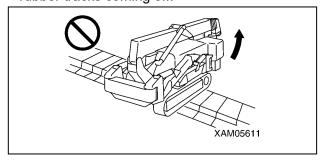

Fig. 5-83

 The rubber tracks slip very easily on a wet steep plate or snowed and frozen surface. Be especially careful not to slip when operating on the slope.

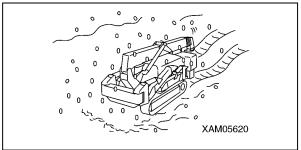

Fig. 5-84

- Avoid using the rubber tracks whenever possible depending on the material to be worked on.
 - If you used the rubber tracks on these materials by necessity, wash thoroughly with water after the use.
- Avoid the operation on the material crushed and yielding oil (such as soy beans, corns, rape cake, etc.)
- Handling salt, ammonium sulfate, potassium chloride, or concentrated superphosphate corrodes the bonding at the cored bar section.

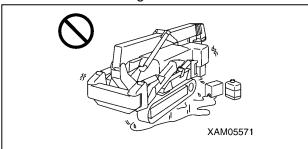

Fig. 5-85

 Salt corrodes the bonding at the cored bar section. Avoid using the machine on the beach whenever possible.

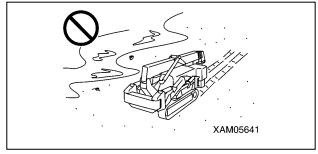

Fig. 5-86

 The operation in the very cold land changes the material of the rubber tracks, shortening its life.
 Use the rubber tracks in the range of -25°C to + 55°C, due to the physical property of the rubber. When handling food such as salt, sugar, wheat, and soybeans, some pieces of wire or rubber may be mixed in the food if there is any deep scratch on the rubber tracks.

Use the rubber tracks after repairing the cracked rubber.

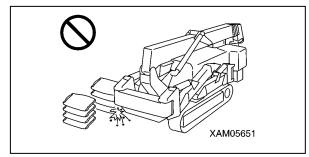

Fig. 5-87

- Always use the rubber tracks at appropriate tension to prevent the rubber track from coming off.
 - Loose tension will allow the rubber tracks to come off.

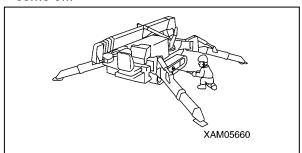

Fig. 5-88

5-48 12/2022 MC305CB-3

Replace Rubber Track

WARNING!

- The inside of the tension adjusting device of the rubber track is greased. Grease is under high pressure associated with the tension of the rubber track. Failure to follow precautions stated below when removing grease may lead to a serious accident due to the grease valve being popping out.
- Only one full turn of the tension adjusting grease valve is allowed to loosen. The grease valve may pop out if disregarded.
- Always stand aside when conducting tension adjustment of the grease valve to circumvent potential dangers.
- Ensure that grease is completely removed from the inside of the rubber track before rotating the sprocket to remove the rubber track.

Removal Rubber Track

Have a steel pipe available.

- See "OUTRIGGER SETTING" on page 4-46 to set the outriggers and raise the rubber track for about 50 mm from the ground.
- 2. Loosen the grease valve (1) gradually and remove grease.

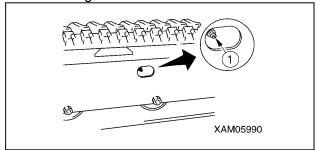

Fig. 5-89

NOTICE: Provide only one full turn of the grease valve (1).

3. Insert the steel pipe between the idler and rubber track, as shown in the figure. Rotate the sprocket backward.

4. When the inserted steel pipe detaches the rubber track from the idler, slide the crawler in a lateral direction to remove it.

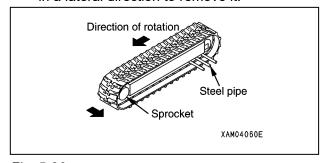

Fig. 5-90

Installation Rubber Track

- · Have a grease gun available.
- · Have a steel pipe available.
- See "OUTRIGGER SETTING" on page 4-46 to set the outriggers and raise the rubber track again for about 50 mm from the ground.
- 2. With the rubber track engaged with the sprocket, put the crawler on the idler.
- 3. With the sprocket rotating backward, push the rubber track in to stop rotation.

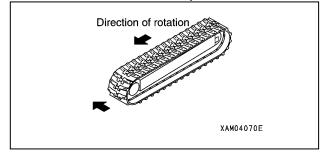

Fig. 5-91

 Insert the steel pipe between the idler and rubber track again, and re-rotate the sprocket to put the crawler on the idler properly.

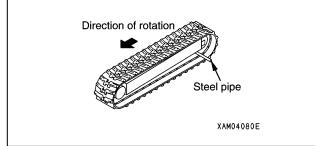

Fig. 5-92

5. Stop rotation, and ensure that the rubber track is on the sprocket and idler properly.

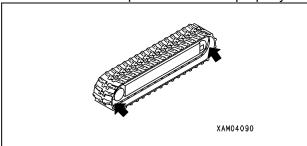

Fig. 5-93

- Make a tension adjustment to the rubber track according to "Check /Adjust Rubber Track Tension" on page 5-27.
- Ensure that adequate engagement and tension of the rubber track, sprocket, and idler are obtained.
- See "OUTRIGGER STOWING" on page 4-54 to stow the outriggers and lower the machine on the ground.

Wire Rope

General Information and Precautions

Contact us or our sales service agency for additional information on replacing and repairing wire rope.

WARNING! Always wear work leather gloves when replacing the wire rope.

CAUTION:

- A diameter of the wire rope is to be measured at points where the wire repeatedly runs through the sheave. A mean value needs to be determined through three-way measurement. (A measurement should be performed at several points, spacing between the points.)
- DO NOT use the old wire rope regardless of the frequency of use.

Inspecting Wire Rope

A wire rope undergoes wear and tear over time. Prompt replacement is required if any of the following events appears in the wire rope.

Broken wire
 In running rope, six randomly distributed broken wires in one lay or three broken wires in one strand in one lay.

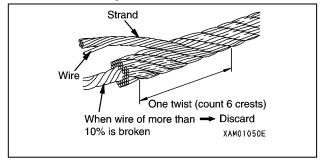

Fig. 5-94

- Kinking, crushing, bird-caging, or any other damage resulting in distortion of the rope structure.
- · Evidence of any heat damage from any cause.

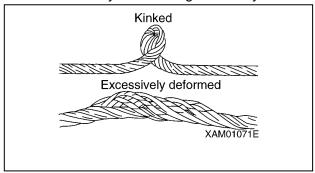

Fig. 5-95

5-50

 Reduction from normal diameter of more than the following:

0.4mm for diameters up to and inching 8.0mm.

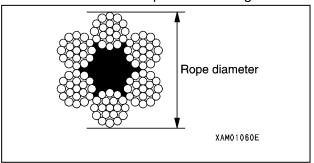

Fig. 5-96

Winch Wire Rope - Correcting Twisted Rope

WARNING! Be sure to wear a pair of thick leather working gloves when handling wire ropes.

CAUTION: Change the hooking direction of the wire rope (inverse the hook block side and winch drum side) from time to time to extend the life of the wire rope.

When the wire rope gets twisted, straighten the twist with the following procedure.

 With the hook in normal condition, check the twisting direction and how many times the rope is twisted.

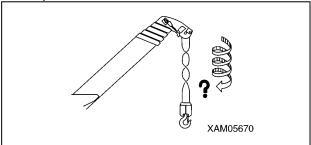

Fig. 5-97

2. Move the winch lever to LOWER (push forward) to lower the hook block until just before it makes contact with the ground. Lower the hook block by either moving the boom lifting lever to LOWER (push forward) to lower the boom or by moving the boom telescoping lever to RETRACT (pull toward you) to retract the boom.

Turn the starter switch to the "OFF" position to stop the machine.

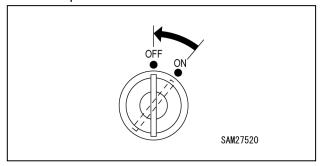

Fig. 5-98

4. Remove the wedge socket pin securing bolt (1) to remove the wedge socket (2).

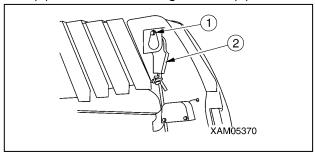

Fig. 5-99

5. Force to twist the end of the wire for "n" (number of wire falls) times of the number hook is twisted for in the opposite direction from the direction the hook block is twisted to and which you checked in the step 1 (opposite direction from the one the wire rope tries to go back to naturally when you release your hand from the wedge socket) and install the wire rope.

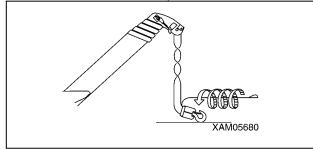

Fig. 5-100

- Start the machine and operate the boom derricking lever to the "RAISE" (pull toward you) side to increase the boom angle to its maximum.
- 7. Operate the boom telescoping lever to the "EXTEND" (push forward) side to extend the boom to its maximum.
- 8. Operate the winch lever to repeat raising/lowering the hook block for several times.

- 9. Tidily spool up the wire rope into the winch drum with some tension applied to the rope.
- 10. Repeat the above procedure until the hook is no more twisted.

If the wire rope is still twisted after performing the procedure above, change with a new wire rope.

Winch Wire Rope - Removal

Use the following procedure to remove the wire rope.

- 1. Place the machine on a level and firm surface.
- 2. Place the boom telescoping lever in the "Extend" position (push it toward the front) to extend the boom slightly.
- 3. Move the winch lever to LOWER (push forward) to lower the hook block until just before it makes contact with the ground. Lower the hook block by either moving the boom derricking lever to LOWER (push forward) to lower the boom or by moving the boom telescoping lever to RETRACT (pull toward you) to retract the boom.
- 4. Undo the wedge socket fixing bolt (2). Remove the wedge socket pin (1) and remove the wedge socket (3).
- 5. Remove the wire clip (4).

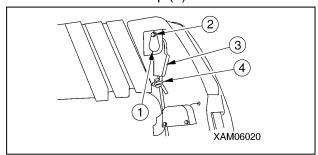

Fig. 5-101

- 6. Pull the wire rope (5) out of the wedge socket (3), following the procedure provided below.
 - (1) Bring a 4 to 6mm round bar (6) into contact with the rope wedge (7).
 - (2) Remove the rope wedge (7), lightly tapping the round bar (6) with a hammer in the direction indicated by the arrow (a).

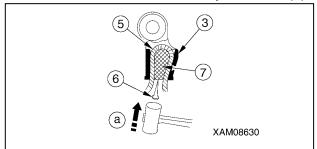

Fig. 5-102

- 7. Place the winch lever in the "Down" position (push it toward the front) to wind up the wire rope (5) from the winch drum.
- 8. With the wire rope winded up from the winch drum, detach the end of the wire rope (5) from the winch drum (8) by following the procedure provided below.
 - (1) Bring a 4 to 6mm round bar (6) into contact with the rope wedge (9).
 - (2) Remove the rope wedge (9), lightly tapping the round bar (6) with a hammer in the direction indicated by the arrow (b).

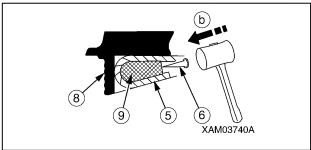

Fig. 5-103

9. Wind up the remaining wire rope (5) completely.

Removal of the winch wire rope is completed.

Winch Wire Rope - Installation

WARNING! Be sure to attach the rope wedge properly to secure the wire rope. Potential serious accident may occur due to detachment of the wire rope during crane operation if disregarded.

CAUTION:

- Avoid irregular winding of the wire rope in the winch drum.
- Always hoist an object 2.9 to 4.9KN (300 to 500kg) with the boom extended and raised fully immediately after attaching a new rope.
 Repeat raising and lowering the hook several times until the new rope conforms.
- The wire rope is coiled. Exercise caution not to form a kink in the rope when winding it up.

Be sure to unrope by rotating the rope to pull it out of the winch drum.

Use the following procedure to attach the wire rope.

1. With the end of the wire rope held, draw the wire rope (5) through the weight of the over winding detector, load sheave (1) at the boom end, wire guide (2) of No.2, 3, and 4 boom, snap sheave (3), and idler sheave (4).

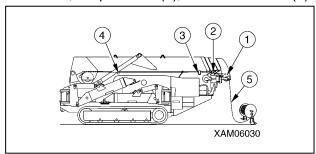

Fig. 5-104

- 2. Draw the wire rope (5) through the attachment hole of the winch drum (8).

 Secure the wire rope (5) to the winch drum
 - (8), following the procedure provided below.
 - (1) Draw the wire rope (5) through the winch drum (8). with the rope loose.
 - (2) The rope wedge (9) should be in position (a). Pass the wire rope (5) around the rope wedge and yank at the rope in the direction indicated by the arrow. Adjust the length of the wire rope (5) to keep the end of the wire rope from protruding from the narrow hole in the winch drum (8).

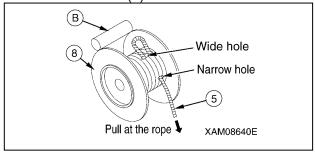

Fig. 5-105

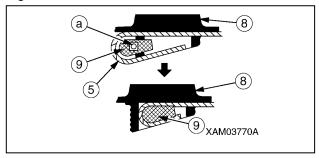

Fig. 5-106

 Place the winch lever in the "Up" position (pull it toward you) slowly to wind up the wire rope (5) in the winch drum (8).
 Ensure that the wire rope is coiled between the irregular winding protective roller (B) and winch drum. The wire rope needs to jut out the boom end (approx. 10m).

4. In response to the number of falls, draw the wire rope through the load sheave at the boom end, hook block sheave, guide sheave, and retraction cam.

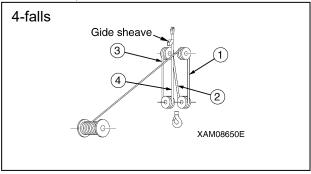

Fig. 5-107

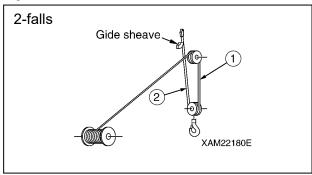

Fig. 5-108

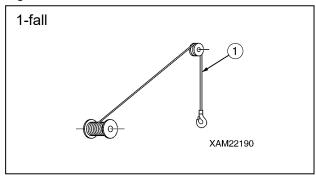

Fig. 5-109

- 5. Secure the end of the wire rope (5) to the wedge socket (3), following the procedure provided below.
 - (1) Draw the wire rope (5) through the wedge socket (3) as shown in the figure.
 - (2) With the rope wedge (7) in position (a), yank at the wire rope (5) in the direction indicated by the arrow.

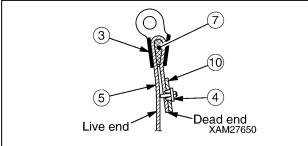

Fig. 5-110

6. Fasten the rope (10) together with the rope clip (4) to the dead end of the wire rope (5).

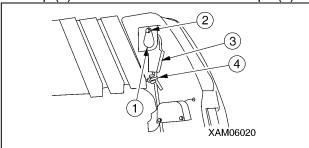

Fig. 5-111

- 7. Secure the wedge socket (3) to the boom with the wedge socket pin (1), and tighten the wedge socket fixing bolt (2).
- Place the boom derricking lever in the "Raise" position (pull it toward you) or the boom telescoping lever in the "Extend" position (pull it toward you) to raise the hook block.

NOTICE: Winch operation is allowed only after the hook block is raised.

- 9. With the boom extended and raised fully, place the winch lever in the "Down" position (push it toward the front) to adjust the wire rope (5) until 3 to 4 turns of wire are left in the winch drum (8).
- 10. With the wire rope (5) held under tension, place the winch lever in the "Up" position (pull it toward you) to wind up the wire rope (5) in the winch drum (8).

5-54 12/2022 MC305CB-3

Check / Adjust Boom Telescoping Wire Rope

Checking Boom Telescoping Wire Rope

Prompt adjustment is required if the following event appears in the boom extending wire rope.

- 1. Retract the boom completely.
- 2. Remove three mounting bolts (1) at the boom end and remove the cover (2).

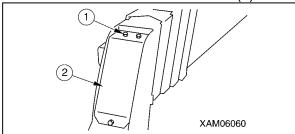

Fig. 5-112

 Remove lock bolt (6) at the boom telescoping cylinder top, and turn adjustment bolt (9) of the boom extending wire clockwise (right).

The boom extending wire rope (8) is adjusted to the correct tension if boom No.5 extends upon rotating the adjusting bolt (9). If boom No.5 remains retracted, perform proper adjustment according to "Adjustment of boom telescoping wire rope".

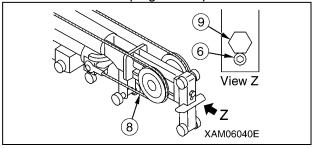

Fig. 5-113

 Check that 5mm clearance is formed between booms No.4 and No.5, clearance (a), with the booms retracted in a horizontal position.

If check finds clearance of 5mm or more, perform proper adjustment according to "Adjustment of Boom Telescoping Wire Rope" on page 5-56.

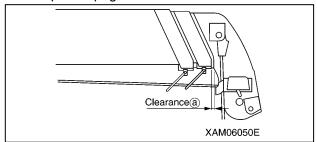

Fig. 5-114

Adjustment of Boom Telescoping Wire Rope CAUTION: The wire ropes must be adjusted to the correct tightness.

A boom extending wire rope (1 piece) and retracting wire rope (1 piece) are used in this machine.

Adjustment of these wire ropes must conform to the specified procedure. Use the following procedure for wire rope adjustment.

1. With the booms retracted in a horizontal position, extend the telescoping booms approx. 2m.

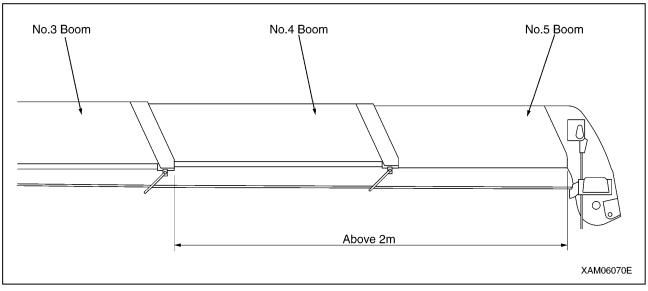

Fig. 5-115

- 2. Retract the booms completely. Slow boom stowing is required.
 - Measure clearance (a) to check the following for proper adjustment.
 - If 5mm or more clearance is formed, adjust the retracting wire rope (5) of boom No.5.
 - If no clearance is formed, perform wire rope adjustment from section 5 "Adjustment of boom No.5 extending wire rope (8)".

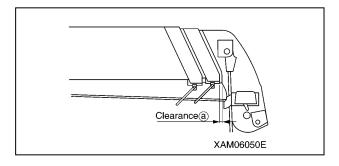

Fig. 5-116

 Remove the three mounting bolts (1) at the boom end and remove the cover (1).
 Adjust the wire rope if it is sagging.

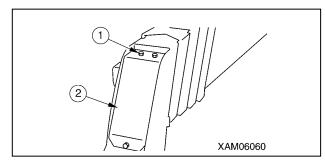

Fig. 5-117

- 4. Adjustment of boom No.5 retracting wire rope (5)
 - (1) With the lock nut (3) loose, turn the adjusting nut (4) in the direction that the retracting wire rope (5) becomes tight (clockwise (right)) to provide laterally even tightening until clearance (a) is bridged.
 - (2) If the retracting wire rope remains sagging or 5mm or more clearance remains present after performing steps 1 and 2, readjustment is required.

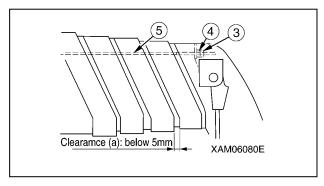

Fig. 5-118

- 5. Adjustment of boom No.5 extending wire rope (8).
 - (1) Remove the lock bolt (6). Turn the adjusting bolt (9) in the direction that the extending wire rope (8) of boom No.5 becomes tight (clockwise (right)) to provide tightening to the verge of the extension of boom No.5.
 - (2) Provide retightening to both adjusting nuts (4) of the boom No.5 retracting wire rope (5) two turns each.
 - (3) Secure the adjusting nuts (4) of the boom No.5 retracting wire rope (5) with the lock nut (3).
 - (4) Provide retightening to both adjusting bolt(9) of the boom No.5 extending wire rope(8), and secure it with the lock bolt (6).

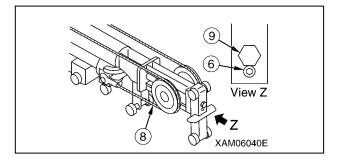

Fig. 5-119

Install the cover (2) to the boom end with the three mounting bolts (1) upon completion of adjustment.

Contaminant Water and Sediment Drainage From Inside the Hydraulic Oil Tank

WARNING!

- All the parts will be at elevated temperatures immediately after machine operation, which urges you not to replace oil. Always perform replacement with the oil cold. (Oil temperature not exceeding 45°C)
- Potential gush of oil may occur upon removing the filler cap of the hydraulic oil tank.
 - Be sure to relieve internal pressure by slowly rotating the filler cap before cap removal.
- The hydraulic oil level varies greatly depending on the oil temperature. As a guide, the oil level should be "H" on the oil gauge when the oil temperature is 50°C.
- Oil replenished should remain below "H" (upper limit) on the level gauge. Excessive oil replenishment may cause the oil to gush from the filter cap during machine travelling and crane operation, which could result in burns.
- Make sure the filler cap is closed properly after replenishment of the oil.
 Potential fall of the filler cap during operation may occur if disregarded, which could cause boiling oil to gush that results in burns.

CAUTION:

- See "LUBRICATING OIL" on page 5-14 for which oil to be used.
- Place the machine in travel position for oil quantity inspection.
- Oil quantity inspection with the machine in working position may deceive your eyes to deem the quantity of oil low. Owing to improper judgment, the oil may be supplied at excessive amount.
- The machine must be at halt until piping and hydraulic equipment is filled with oil after replacement of the hydraulic oil filter.
- Keep impurities out of the filler cap when replenishing oil.

- Container to catch contaminant water:
 A 10 L container
- 1. Put the machine in the travelling posuture on a level surface.

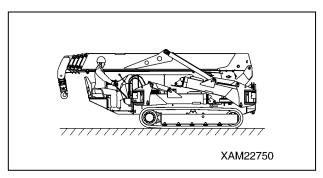

Fig. 5-120

- 2. See "OUTRIGGER SETTING" on page 4-46 and rotate the outriggers outward.
- 3. See "Removing Machinery Cover" on page 5-18 and remove the machinery cover.
- 4. Remove the filler cap (F) located on top of the hydraulic oil tank.

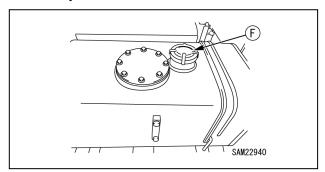

Fig. 5-121

5. Place the container to catch the contaminant water immediately below the drain plug (P).

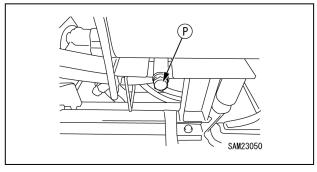

Fig. 5-122

- 6. Remove the drain plug (P) slowly to prevent oil or water from splashing, and drain out the contaminant water.
- Inspect the drained contaminant water.
 Contact us or our sales service agency if the water contains excessive metal debris or other foreign matter.
- 8. Put in the drain plug (P) and secure it.

5-58 12/2022 MC305CB-3

9. Replenish the hydraulic oil (at 50° C) via the filler opening (F) until it reaches the "H" level on the oil level gauge (G).

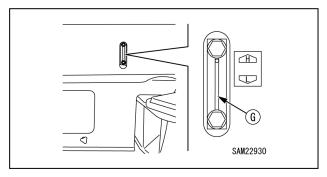

Fig. 5-123

10. Close the filler cap (F) after replenishment of the oil.

NOTICE: Wipe off the oil completely if spilled.

- 11. See "Installing Machinery Cover" on page5-18 and install the machinery cover.
- 12. Use the following procedure for air bleed.
 - Start the machine with piping and hydraulic equipment filled with oil.
 Make sure the machine runs at low idle for 10 minutes.
 - (2) Move the cylinders and winch motor slowly with a crane control lever at low idle speed.

Always stop the boom derricking cylinder and telescoping cylinder approx. 100mm back from the stroke end when operating the cylinders.

Repeat this task 4 to 5 times.

(3) Allow all the outriggers to be extended, referring to "OUTRIGGER SETTING" on page 4-46. Extend and retract the outrigger cylinder, keeping the machine down on the ground.

Always stop the outrigger cylinder approx. 100mm back from the stroke end when operating the cylinder.

Repeat this task 4 to 5 times.

13. See "OUTRIGGER STOWING" on page 4-54 to stow the outriggers.

LONG-TERM STORAGE

Before Storing Machine

CAUTION:

- The machine shall take the posture shown in the figure during the long-term storage to protect the cylinder rod. For more information on travelling posture, see "TRAVELLING POSITION" on page 4-31. (To prevent rust on the cylinder rod)
- Charge the battery to at least 50%.

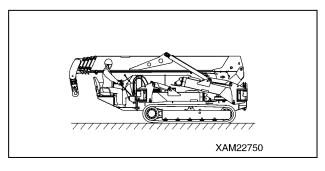

Fig. 5-124

Store the machine as described below for long-term storage.

- Wash and clean each section of the machine and store indoor.
 - If you absolutely have to leave it outdoor, select a flat location where the machine is not likely to be exposed to flood or other disasters and cover the machine.
- · Grease and change the oil without fail.
- Storage under the following conditions is recommended to prolong battery life.
 - Store with the battery charged to between 10% and 95%.
 - Store at an ambient temperature below 35°C.
 - · Store away from direct sunlight.
 - Store in a location free from condensation.
 - · Disconnect the battery.

During Storage

CAUTION:

- During the storage period, operate the machine once a month to prevent oil film shortage in lubricated parts and perform anti-corrosion operations.
- After the anti-corrosion operation, charge the battery to 50% to avoid over-discharging the battery.

After Storage

WARNING!

- If you did not perform antirust operation monthly during the long-term storage, contact us or our sales service agency before using the machine.
- If the machine stops working during longterm storage without charging the battery to 50% once a month, please contact us or our sales and service agents.

Perform the followings before using the machine after the long-term storage.

- · Grease and change the oil without fail.
- Remove the drain plug of the hydraulic tank to drain the water mixed in.
- · Charge the battery.
- Carefully perform the check before starting operation and warm-up operation.
 Carefully check the various parts of the machine.

5-60 12/2022 MC305CB-3

COLD TEMPERATURE PREPARATION

The following steps should be taken in cold conditions, as the oil flow will deteriorate and machine performance will be reduced.

Lubrication

Change the oil to the one with low viscosity. See "LUBRICATING OIL" on page 5-14 for the specified viscosity.

Battery

The battery unit can be used in ambient temperatures as low as -20°C, although battery performance may be reduced at low temperatures.

Cautions after Completing the Operation

Observe the followings to prevent the machine from not being able to function the next morning because of deposits such as dirt and water and materials around the feet frozen.

- Remove the dirt and water on the machine.
 Keep the hydraulic cylinder rod surface especially clean to prevent seal from being damaged with the dirt coming into the seal together with the water drops.
- Park the machine on the solid and dry ground.
 If there is no such location to park, place a board on the ground to park the machine on the board.

This prevents the ground and around the feet of the machine from freezing and allows the machine to start moving next morning.

After the Cold Weather Is Gone

When the season changed and it started to get warm, take the following action.

 See "LUBRICATING OIL" on page 5-14 to change the oil in the system to the one with specified viscosity

850 kg SEARCHER HOOK INSPECTION AND MAINTENANCE

Legal Inspection

If a periodic safety inspection is required by the laws and regulations of your country, perform that inspection in addition to the inspection items listed below.

- 1. Verify that all safety devices are operating properly.
- 2. Check the hoist accessories, including the hook block, for problems or damage.
- Check the structural parts of the machine, including the frame and boom, for cracks, deformation and damage.
- 4. Check for loose or missing mounting bolts and joints.
- Verify that the boom operates properly by stopping, extending, retracting, raising, lowering and slewing the boom.

Contact us or our sales service agency to request inspection and repair service as needed.

Consumables

Parts for mounting searcher hook are consumable items. Replace them at periodic inspection or before they reach abrasion limits. Replace consumable items regularly, which will produce economical use of this machine. Always replace with a Maeda genuine item. Check parts catalogue for correct part number for parts request.

List of Consumables			
Item	Replacement cycle		
Searcher hook fix bolt M12x35L strength 10.9 (4pcs)			
Searcher hook fix bolt M12x30L strength 10.9 (4pcs)	Every 6 months		
Searcher hook fix bolt M8x16L strength 10.9 (1pcs)	or when damage, crack, or squash is found		
Searcher hook fix nut M12x1grade (8pcs)	Tourid		
Searcher hook fix washer M12x3.2t (high tension) (8pcs)			

Items include a halt period. Contact us or our sales service agency for part replacement information.

5-62 12/2022 MC305CB-3

Inspection and Maintenance List

The following only covers the searcher hook kit. For the machine body, see "INSPECTION" on page 5-21 and follow its instructions.

Maintain in accordance with the laws and regulations of the relevant country and region.

Inspection Item	Reference		
Pre-Start Visible Checks	See "Visible Checks" on page 5-64.		
Pre-Start – Before Starting the Machine			
Check E-Boom and Bracket	See "E-Boom and Bracket" on page 5-64.		
Check Greasing	See "Greasing" on page 5-64.		
Check Searcher Hook Fix Bolts	See "Searcher Hook Fix Bolts" on page 5-64.		
Installation Check of Position Pin and Lynch Pin	See "Position Pin and Lynch Pin" on page 5-64.		
Check Hook	See "Hook" on page 5-65.		
Post-Start – After Starting the Machine			
Check Moment Limiter for Operation (850 kg Searcher Hook Mode)	See "Moment Limiter (850 kg Searcher Hook Mode)" on page 5-65.		

Visible Checks

- 1. Check that there are no abnormalities with the safety equipment.
- 2. Check that there are no abnormalities with the hooks or other lifting equipment.
- Check that there is no cracking or deformation on the booms or other structural parts.
- Check that the specified mounting bolts and nuts are used and that they are not loose or missing.
- 5. Operate the boom and check that it moves and stops correctly.

Contact our sales service agency if abnormalities are discovered during inspection.

Pre-Start – Before Starting the Machine

Check the following in this section without starting the machine and before starting work every day.

E-Boom and Bracket

Check each part of the E-Boom and bracket for cracks, excessive deformation and contamination etc. In addition, check bolts, nuts and pins for any looseness, drop and damage etc. If you find any abnormality, repair.

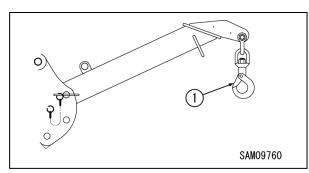

Fig. 5-125

Greasing

 Wipe off and clean old grease from contact point (3) of shackle (2) and E-boom hole, and contact point (4) of hook (1) and shackle (2), then apply new lithium grease.

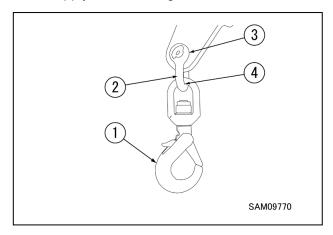

Fig. 5-126

Searcher Hook Fix Bolts

DANGER! If any damage is found on searcher hook fixing bolts, please exchange for new one's right away.

Breakage of bolts will cause the searcher hook to fall off.

Check if bolts used are the designated type.
 Also check if there are cracks, damage, squashing, heavy dirt, or rust on bolt.
 If any abnormality is found, change the bolt for a new one even it is earlier than expected bolt life.

Position Pin and Lynch Pin

• Check if position pin is surely secured with lynch pin.

Inspect the pins for damage or excessive deformation. Replace if abnormal.

5-64 12/2022 MC305CB-3

Hook

- 1. Check if the stopper properly works to keep wire rope. If any abnormality is found, replace.
- 2. Rotate hook and check if the hook smoothly rotates, and no abnormal noise is heard. If any abnormality is found, repair or replace.
- Check the hook for any cracks or heavy deformation. If any abnormality is found, replace.
- 4. Replace when the hook dimensions meet the following replacement standards.

	Standard	Replacement level
а	37mm	More than 38.9mm
b	25mm	Less than 23.7mm

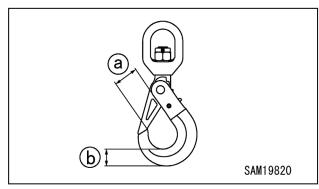

Fig. 5-127

Post-Start – After Starting the Machine

CAUTION: The checkups described in this section should be carried out after starting the machine.

See "STARTING THE MACHINE" on page 4-28 and later to execute the machine startup, travelling operations, outrigger operations and crane operations.

Moment Limiter (850 kg Searcher Hook Mode)

WARNING! If you find any abnormality with the moment limiter, immediately contact us or our sales service agency.

- 1. Turn the starter switch to the "ON" position.
- 2. Check with the working status lamp. Green lights up after all three colours have lit up.
- Check the moment limiter display unit.
 Verify that no error code is displayed at the "RATED TOTAL LOAD" display on the display panel.
 - Check if moment limiter is set as 850 kg searcher hook mode, and display in boom length matches actual searcher hook offset position.
 - For correct setting, see "Searcher Hook offset position and mode display in boom length display" on page 4-136.
- Shift the fall mode selector switch on moment limiter display unit to "850 kg Searcher hook mode".
- Start the machine and operate the crane as follows to verify if the moment limiter properly displays the value.

Crane Operation and Displayed Parameter	Value Displayed on Moment Limiter
Displayed "boom length" with the boom length at minimum	3.7 m
Displayed "boom length" with the boom length at maximum	12.5 m
Displayed "working radius"	SH1 5.7 ± 0.1 m
with the boom length of 5.9m and boom angle of 25°	SH2 6.1 ± 0.1 m
	SH3 5.8 ± 0.1 m

- 6. Check if displayed actual load value is equal to the total weight of the load + the hoisting accessory, when the weight of the known load is hoisted. There may be slight error in accuracy depending on boom condition.
- Operate the crane until the moment limiter display indicates the boom length is 5.9m and boom angle is "25 degrees", then measure the "boom angle" and "working radius".
 - If the measured value(s) differ from the moment limiter display value, contact MAEDA or MAEDA sales agency.
- 8. Lift up load and check if boom extending or boom lowering operation is auto-stopped when overloaded. If the operation is not auto-stopped in overloaded condition, stop using the machine and contact us or our sales service agency.

This checking operation must be operated slowly, and if machine does not auto-stop by overloading, immediately stop the operation, and perform recovery operation caused by overloading.

NOTICE: When measuring actual working radius, measure from hook offset position of searcher hook.

5-66 12/2022 MC305CB-3

1.5 t SEACHER HOOK INSPECTION AND MAINTENANCE

Legal Inspection

If a periodic safety inspection is required by the laws and regulations of your country, perform that inspection in addition to the inspection items listed below.

- 1. Verify that all safety devices are operating properly.
- 2. Check the hoist accessories, including the hook block, for problems or damage.
- Check the structural parts of the machine, including the frame and boom, for cracks, deformation and damage.
- 4. Check for loose or missing mounting bolts and joints.
- Verify that the boom operates properly by stopping, extending, retracting, raising, lowering and slewing the boom.

Contact us or a our sales service agency to request inspection and repair service as needed.

Consumables

Parts for mounting searcher hook are consumable items. Replace them at periodic inspection or before they reach abrasion limits. Replace consumable items regularly, which will produce economical use of this machine. Always replace with a Maeda genuine item. Check parts catalog for correct part number for parts request.

List of Consumables		
Item	Replacement cycle	
Searcher hook fix bolt M12x35L strength 10.9 (4pcs)		
Searcher hook fix bolt M12x30L strength 10.9 (4pcs)	Every 6 months	
Searcher hook fix bolt M8x16L strength 10.9 (1pcs)	or when damage, crack, or squash is found	
Searcher hook fix nut M12x1grade (8pcs)	Tourid	
Searcher hook fix washer M12x3.2t (high tension) (8pcs)		

I Items include a halt period. Contact Maeda or a Maeda sales service agency for part replacement information.

Inspection and Maintenance List

This document only covers 1.5 t searcher hook kit. For the machine body, see "INSPECTION" on page 5-21 and follow its instructions.

Inspection and maintenance items	Reference	
Pre-Start Visible Checks	See "Visible Checks" on page 5-69.	
Pre-Start – Before Starting the Machine		
Check E-Boom and Bracket	See "E-Boom and Bracket" on page 5-69.	
Check Greasing	See "Greasing" on page 5-69.	
Check Searcher Hook Fix Bolts	See "Searcher Hook Fix Bolts" on page 5-69.	
Installation Check of Position Pin and Lynch Pin	See "Position Pin and Lynch Pin" on page 5-69.	
Check Hook	See "Hook" on page 5-69.	
Post-Start – After Starting the Machine		
Inspection of Boom Operations	See "Boom Operations" on page 5-70.	
Inspection of Moment Limiter (1.5t Searcher Hook Selection)	See "Moment Limiter (1.5 t Searcher Hook Mode)" on page 5-70.	

5-68 12/2022 MC305CB-3

Visible Checks

- 1. Check that there are no abnormalities with the safety equipment.
- 2. Check that there are no abnormalities with the hooks or other lifting equipment.
- Check that there is no cracking or deformation on the booms or other structural parts.
- Check that the specified mounting bolts and nuts are used and that they are not loose or missing.
- 5. Operate the boom and check that it moves and stops correctly.

Contact our sales service agency if abnormalities are discovered during inspection.

Pre-Start – Before Starting the Machine

Check the following in this section without starting the machine and before starting work every day.

E-Boom and Bracket

Check each part of the E-Boom and bracket for cracks, excessive deformation and contamination etc. If you find any abnormality, repair.

Greasing

Wipe off and clean old grease from contact point as listed below, then apply new lithium grease.

1	Contact point hole (3) of E-boom and shackle (2)
2	Contact point (4) of swivel hook (1) and shackle (2)

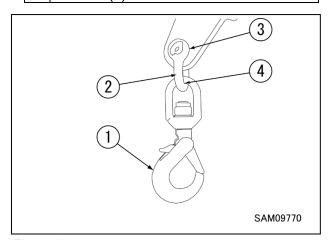

Fig. 5-128

Searcher Hook Fix Bolts

Check if bolts used are at the designated strength. Also check if the bolts are tightened by designated torque. Refer "Installation of 1.5t Searcher hook" for the designated torque.

Also check if there are cracks, damage, squashing, heavy dirt, or rust on bolt.

If any abnormality is found, change the bolt for a new one even it is earlier than expected bolt life.

Position Pin and Lynch Pin

Check if position pin is surely secured with lynch pin.

Check if there are damage or heavy deformation on the pins. If any abnormality is found, change the pins.

Hook

- 1. Check if the stopper properly works to keep wire rope. If any abnormality is found, replace.
- 2. Rotate hook and check if the hook smoothly rotates, and no abnormal noise is heard. If any abnormality is found, repair or replace.
- 3. Check the hook for any cracks or heavy deformation. If any abnormality is found, replace.
- 4. Replace when the hook dimensions meet the following replacement standards.

Standard		Replacement level
а	37mm	More than 38.9mm
b	25mm	Less than 23.7mm

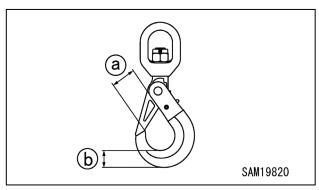

Fig. 5-129

Post-Start – After Starting the Machine

The checkups described in this section should be carried out after starting the machine.

Boom Operations

WARNING! When checking the operation of the boom, make safety checks to ensure that the hook and the boom do not come in contact with people or objects.

- Check the boom and searcher hook make no abnormal sounds when operating the crane.
- Operate the crane with no load and check that all the bolts are securely tightened and have not fallen out.

Moment Limiter (1.5 t Searcher Hook Mode) WARNING! When an abnormality occurs in the moment limiter, immediately stop using the machine and contact us or our sales service agent.

- Turn the starter switch to the "ON" position.
 When set to "ON", all of the 1, 2, and 4 falls
 LED lights on the moment limiter display will
 light for a moment and then turn off.
- 2. Check with the working status lamp. Green lights up after all three colours have lit up.
- Check the moment limiter display unit.
 Verify that no error code is displayed at the "RATED TOTAL LOAD" display on the display panel.
 - Check if moment limiter is set as 1.5t searcher hook mode.
- 4. Operate the crane and, with the moment limiter displaying boom length "5.9 m" and the boom angle "25 degrees", make actual measurements of the "Boom angle" and the "Working radius". Confirm the difference between the actual measurement and display value of the moment limiter are "within ±0.1m" and "within ±1°" respectively, contact us or our sales service agency.

5. Start the machine and operate the crane to the state as follows. Then, check if the monitor display of the moment limiter is correct.

Crane Operation and Displayed Parameter	Value Displayed on Moment Limiter	
Displayed "boom length" with the boom length at minimum	3.7 m	
Displayed "boom length" with the boom length at maximum	12.5 m	
Displayed "working radius"	SH1 5.5 ± 0.1 m	
with the boom length of 5.9 m and boom angle of	SH2 5.7 ± 0.1 m	
25°	SH3 5.6 ± 0.1 m	

- Check if displayed actual load value is equal to the total weight of the load + searcher hook + the hoisting accessory, when the load weight is known. There may be slight error in accuracy depending on boom condition.
- 7. Lift up load slowly and check if boom extending or boom lowering operation is auto-stopped when overloaded. If the operation is not auto-stopped in overloaded condition, immediately stop the operation and escape from the overload condition by operating to safe side.

NOTICE: To measure the actual working radius, measure it from the hook position by suspending a cord vertically from the hook at the tip of the searcher hook.

5-70 12/2022 MC305CB-3

TROUBLESHOOTING

General

- If an error code is displayed on the monitor or moment limiter, the corresponding corrective action should take priority. Make sure that you contact us or our sales service agency for the actions indicated in parentheses in the Actions field.
- Contact our sales service agency if you suspect other abnormality or causes than those given below.

Electrical Components

Abnormal Phenomenon	Major Cause(s)	Actions	
Dark light even	• Defective wiring * Character terms * Character		
Light does not turn on.	Defective wiring Defective light	* Check and repair * Replace	
	Defective monitor signal	Turn starter switch to the "OFF" position and then back to "ON" again.	
Monitor does not turn on.	Defective wiring	* Check and repair	
	Blown fuse	* Replace	
	Defective monitor	* Replace	

Machine Body

Abnormal Phenomenon	Major Cause(s)	Actions
Crane cannot be operated but can travel.	Crane operation lever detection defect Work selector switch not	* Check and repair harness. * Check and repair receiver. * Check and repair differential transducer. • Set work selector switch to
	at "Crane"Hydraulic oil or motor is overheating.Defective controller	"Crane".Allow hydraulic oil and motor to cool.* Check and repair or replace.
	 Outrigger rotary not rotated to extension position (outward). Work selector switch not 	 Secure rotary at extension position. Set work selector switch to
Outriggers cannot be operated	at "Outrigger" • Defective switch or harness	"Outrigger". * Check and repair
	Emergency stop switch is at "ON".	Set emergency stop switch to "OFF".
	Hydraulic oil or motor is overheating.	Allow hydraulic oil and motor to cool.
	Defective controller	* Check and repair or replace.
	Work selector switch is at "Travel".	Set work selector switch to "Outrigger" or "Crane".
	Defective switch or harness	* Check and repair.
Neither the crane nor outriggers can be operated.	Emergency stop switch is at "ON".	Set emergency stop switch to "OFF".
	Hydraulic oil or motor is overheating.	Allow hydraulic oil and motor to cool.
	Defective controller	* Check and repair or replace.
	Work selector switch is not at "Travel".	Set work selector switch to "Travel".
	Acceleration pedal is not depressed.	Depress acceleration pedal.
	Acceleration cable is slack.	* Check and repair.
Machine cannot travel.	Defective acceleration potentiometer	* Check and repair.
	Emergency stop switch is at "ON".	Set emergency stop switch to "OFF".
	Hydraulic oil or motor is overheating.	Allow hydraulic oil and motor to cool.
	Defective controller	* Check and repair or replace.

5-72 12/2022 MC305CB-3

Abnormal Phenomenon	Major Cause(s)	Actions
 Travelling speed, boom, and hook block operation speed are too slow. Abnormal noise from pump 	 Insufficient hydraulic oil Hydraulic oil tank strainer and element clogged. Set to Eco mode. High-speed switch not pressed. 	 See "Check / Add Hydraulic Oil" on page 5-25 and replenish hydraulic oil. See "PERIODIC MAINTENANCE" on page 5-36 and clean or replace. Set to Standard mode. Press high-speed switch.
Hydraulic oil temperature too high	 Excessive operating load Insufficient hydraulic oil Warm-up operation mode is set to "ON". Ambient temperature is high. Rest time is too short. 	 Reduce operating load and extend time between operations. See "Check / Add Hydraulic Oil" on page 5-25 and replenish hydraulic oil. Set warm-up operation mode to "OFF". Take measures to counter high ambient temperatures. Extend time between operations.
Rubber tracks detach. Abnormal sprocket wear	Rubber tracks are too loose.	See "Check / Adjust Rubber Track Tension" on page 5-27 and adjust tension.

Battery

Problem	Major Cause(s)	Actions	
	Disconnect switch set to "UNLOCK"	Set disconnect switch to "LOCK".	
	Defective power supply cable	Replace cable.	
	Facility circuit breaker is turned off.	Check circuit breaker.	
	Status switch is turned off when starting charging.	Turn the starter switch to the "ON" position.	
Cannot charge	Charging plug not inserted correctly	Check charging plug.	
Carriot charge	BMU abnormality	* Inspect and replace.	
	Motor controller abnormality	* Inspect and replace.	
	Over discharge	* Inspect and replace.	
	Charger defect	* Inspect and replace.	
	Harness defect	* Inspect and replace.	
	High working load	Reduce working load. Increase interval between tasks.	
	Working at high elevation	Move to lower elevation.	
	High ambient temperature	Take measures to protect against high temperatures.	
Battery and controller overheat	Warming up is turned on.	Turn off warming up.	
	Cooling fan defect	* Inspect and replace.	
	Controller error	* Inspect, repair, or replace.	
	Battery error	* Inspect, repair, or replace.	

5-74 12/2022 MC305CB-3

Electric Motor

Problem	Major Cause(s)	Actions
	Insufficient battery capacity	Charge battery.
	Overheating	* Allow hydraulic oil, motor, and motor controller to cool.
Motor does not start with the starter switch in the "ON" position, even when control levers are operated.	Emergency stop "ON"	* Set emergency stop switch to "OFF".
	Defective wiring	* Inspect, repair, or replace.
	Controller error	* Inspect, repair, or replace.
	Overheating	Reduce the hydraulic oil temperature, motor temperature, and motor controller temperature.
Motor stops during use.	Electric motor defect	* Inspect, repair, or replace.
	Insufficient battery capacity	Charge battery.
Motor output is low or gradually decreases.	Insufficient battery capacity	Charge battery.
Motor emits abnormal sound or vibration while in operation.	Controller error	* Inspect, repair, or replace.
Motor overheats while in operation. Motor output is low or gradually	Motor or pump retaining bolts loose	* Inspect and replace.
decreases.	Motor or pump defect	* Inspect and replace.
	High working load	Reduce working load. Increase interval between tasks.
	Working at high elevation	Move to lower elevation.
Motor emits abnormal sound or	High ambient temperature	Take measures to protect against high temperatures.
vibration while in operation.	Warming up is turned on.	Turn off warming up.
	Defective cooling fan	* Inspect and replace.
	Controller error	* Inspect, repair, or replace.

Remote Control

While Crane operates perfectly under manual control, a part or whole functions are un-operable by the remote control.

In such event of failure as above, perform the DIAGNOSIS shown in next pages.

CAUTION: First, check in accordance with the table below before you start the diagnosis, based on next pages.

Such an error may be occasionally fixed by simple practice, such as applying another operation procedure or replacing batteries.

Where the checking by the table below and diagnosis in accordance with the process in the next pages fail to fix the errors or faults, contact us or our sales service agency.

When such errors are due to the electrical failure of the remote control devices, the Crane is operable under the manual control from the Crane.

Check Points	Cause and Action
The Crane is operable under the manual control from the Crane.	When the Crane operates, this remote control device has a failure. Otherwise, when the Crane does not operate, perform the diagnosis of the Crane, itself.
Power of the Transmitter and Receiver is ON.	Turn ON the power, when not.
The fuse in the Receiver is blown.	Check whether the fuse is blown or not; check the cause when blown, then replace with a new one.
Indications in the LCD screen of the Transmitter are OK.	Turn ON the power, when not. When the indications are still not available, repair or replace.
The Transmitter enclosure is deformed or damaged.	Where the Transmitter enclosure is deformed or damaged, repair or replace it.
Each operation lever of the Transmitter is in its neutral position. The Accelerator lever is completely returned.	In any event of operation levers and control buttons failure, repair or replace.
Manipulation began just after the Power switch of the Transmitter is turned ON.	Allow 3 to 4 seconds after the Transmitter power is turned ON, with no operations.
The LCD screen in the Transmitter or the Monitor display in the Receiver shows error messages or error codes.	In the event where the error messages or error codes are indicated, once power OFF the Transmitter and turn it ON again.

5-76 12/2022 MC305CB-3

Remote Control Error Codes

- At the error diagnosis, always verify the indications in the Monitor display in the Receiver and the LCD screen in the Transmitter. Then find the suitable error display description in the table below so that the cause is presumed, then, follow the recommended remedy in it.
- First, perform the "Remedy 1" in the table, then continue the "Remedy 2" where the error is not fixed yet.
- Remedies marked with * must inevitably be contacted us or our sales service agency.
- When any other causes are suspected than listed below, contact us or our sales service agency.

Error display		Main anns	Remedy		
Transmitter	Receiver	Main cause	Remedy 1	Remedy 2	
		Receiver printed circuit board (PCB) input voltage dropped. Relay PCB defective. Power line wire harness defective between relay PCB and Receiver PCB.	* Maintenance / replace		
		Receiver PCB defective	* Maintenance / replace		
	8.8.	 Communication error Relay PCB in the Crane side defective. Wiring failure between the communication PCB and the Moment limiter display panel. The Moment limiter display panel defective. 	 Power ON again the Transmitter and Receiver Shut down the electrical power of the Crane, then ON again. 	* Maintenance / replace	
STOP	8.8.	The Transmitter is in emergency stop	Use the Reset button to release the emergency stop.	* Maintenance / replace	
	88	 The Transmitter defective The Transmitter power is not ON. The Transmitter PCB defective. Wire cut in the Connection cable. 	Power ON again the Transmitter Maintenance / replace Maintenance / replace	* Maintenance / replace	
		The Receiver defective. • The Receiver PCB defective. • Wiring problem in the Receiver	* Maintenance / replace		
8. 8.	8.8.	 The Transmitter defective The Transmitter PCB defective. Voltage dropped in the Transmitter. Wirings for Accelerator and operation levers cut, or fault of VR. 	Return the Accelerator lever and power ON the Transmitter, again	* Maintenance / replace	

Error display		Main cause	Remedy		
Transmitter	Receiver	Main cause	Remedy 1	Remedy 2	
	8.8.	The Transmitter defective The Transmitter Accelerator lever position defective.	Return the Accelerator lever and power ON the Transmitter, again.	* Maintenance / replace	
	8.5.	The Transmitter defective • The Accelerator lever was pulled, when power was turned ON.	Return the Accelerator lever and push the Reset button.	* Maintenance / replace	
	8.8.	The Receiver PCB defective • Data error in the memory.	Power on the Receiver, again.	* Maintenance / replace	
	8.8.	The Receiver PCB defective • CPU error	Power on the Receiver, again.	* Maintenance / replace	

5-78 12/2022 MC305CB-3

Error display		Main agus	Remedy		
Transmitter	Receiver	Main cause	Transmitter	Receiver	
8.8.		The Transmitter, internal devices defective. • Operation levers were not in the neutral position, when power was turned ON.	Return operation levers and push the Reset button.	* Maintenance/ replace	
		The Transmitter, internal Devices defective. • Data error in the memory.	Power on the Transmitter, again.	* Maintenance/ replace	
	8.	Breaking of wire for telescopic control	* Maintenance/ replace		
	88	Breaking of wire for hoisting control	* Maintenance/ replace		
	88	Breaking of wire for derricking control	* Maintenance/ replace		
	88	Breaking of wire for slewing control	* Maintenance/ replace		
	88	Breaking of wire for accelerator	* Maintenance/ replace		
	88	Valve neutral error	* Maintenance/ replace		
The Crane operates perfectly under the manual mode but some functions are not available in the remote control mode.		 The Receiver PCB defective. Wiring failure between the Receiver PCB and the control valve solenoids. Electromagnetic proportional control reducing valve error. 	* Maintenance / replace * Maintenance / replace * Maintenance / replace		

Moment Limiter Error Codes

The moment limiter displays an error code at the "rated total load" display section on the display panel to notify the error.

If an error code shown in the table below was displayed, contact us or our sales service agency.

Error Code	Error Details	Actions to Be Taken
E1L	The input to pressure sensor 1 is lower than the specified value.	Check the installation of the pressure
E1H	The input to pressure sensor 1 is higher than the specified value.	sensor 1.
E2L	The input to pressure sensor 2 is lower than the specified value.	Check the installation of the pressure
E2H	The input to pressure sensor 2 is higher than the specified value.	sensor 2.
E3L	The input to angle detector is lower than the specified value.	Check the installation of the angle
88	The input to angle detector is higher than the specified value.	detector.
E4L	The input to length detector is lower than the specified value.	Check the installation of the length
E4H	The input to length detector is higher than the specified value.	detector.
88	The AD converter at the converter section is not functioning properly.	Turn the starter switch to the "OFF" position and then to the "ON" position again. If an error is displayed again, change the converter.
ERS B	The communication between the converter section and the indicator is not carried out properly.	Check the cable between the indicator and the converter. If the cable is normal, change the converter.
E-E	Error with calibration memory. This error is also issued when calibration has not been done yet.	Turn the starter switch to the "OFF" position and then to the "ON" position again. If an error is displayed again, change the indicator.
ER6	Slewing detection limit switch disconnected or improperly adjusted.	Adjust and check the slewing detection limit switch.
No displayed		Check the fuse built-in the display unit.

5-80 12/2022 MC305CB-3

In addition to machine body-related errors, setting-related errors may also be displayed. If the error codes listed in the tables below appear, contact us or our sales service agency.

Error code displayed in the boom angle display section:

Error Code		Error Details	Actions to Be Taken	
	888	The clock has not been set.	Set the clock.	

Error code displayed in the lifting height display section:

Error Code Error Details		Actions to Be Taken	
888	The battery needs replacing.	Replace the battery. Reset the battery replacement date after replacement.	

Monitor Error Codes

- Contact our sales service agency if the solutions provided here do not resolve your problem.
- For solutions indicated by ★, stop using the machine immediately and contact us or our sales service agency.
- For the solutions indicated by ☆, certain functions may be restricted, but operation is still possible. Be sure to inspect and maintain the equipment after use. If necessary, contact us or our sales service agency.

Error Code	Description	Working Status Lamp flashes in red	Alarm buzzer	Solution
EO***	Output error	_	1	☆
ES***	Sensor error	_	_	☆
EV01	BMU power-supply voltage error		1	 Check battery charge. Check wiring.
EC03	TTC30X communication error	•	•	*
EC96	BMU communication error	•	•	*
EC97	Motor controller communication error	•	•	*
EC99	TTC60 communication error (crane)	_	-	*
A***	Battery charger error	_	1	*
BMU***	BMU error	_	_	*
F****	Motor controller error	_	_	*

The numbers indicated by *** in the error code will vary depending on the individual error.
